Hi Dave,

Just a quick reply on your post. I was in law enforcement for 31 years.
We could not have our narcotic deal traffic in the clear. As a matter of fact we also used the lowest power possible. This was to protect the undercover agents as well as not tipping off the dealers. This is just a small example of why encryption. Bad guys use scanners also !
Our other traffic was in the clear.

Like you can sue anyone for anything, you can file FIR request. It does not mean you'll get anything in return for either.

Carl

> Believe it or not you can have a Freedom of Information request for any kind of specific radio traffic. Yes the radio waves are encrypted some places. However the audio from that traffic is recorded 24 hours a day 7 days a week. The public does have a right to hear that. However, you have to show they need for the traffic such as a criminal or civil case. Law enforcement and First Responders cannot operate in a vacuum. While I do agree there are times when traffic does need to be encrypted but the greatest majority in this most traffic is routine. I know what I'm talking about because I was in the media for 40 years I also work for my local police department for some time as a radio dispatcher. But, listening to scanner Traffic the band is far different then when we listen to the old scanners with just a few channels. Now departments have all kinds of different channels on the same frequencies and it takes a very expensive radio to hear even unencrypted traffic. Get ready to spend at least $500 at the very least. You need to also set aside money for software to keep up with what you are listening to. I now live in the Northern Virginia area and there are literally thousands radio channels... Some of which are encrypted. But if you just want to listen to a couple of channels in your area check broadcastify.com and see if someone there has put them on the Internet for you at no charge.

That's a good example of when encryption is necessary. But, that's why you have narcotics channels separate from dispatch channels. Low power and off-trunk is also a good idea. I would even go so far as to suggest a different radio band be used.

I have to ask why busts were not planned in an office and the only radio use required was "All units - Go!" which is too late for it to be of any use to anyone else. Are you talking about surveillance? Again, you obviously don't want that on your dispatch channels.

The issue is when they choose to encrypt everything (unlike your case).

True, although I don't think the recording of ENC would help as most scanners are set to avoid those transmissions. Never tried recording one though.

Here in my County some calls are sent via MDT it even pager as some officers don't have MDT's. Usually those calls are for bigshots and very far and few between. Some too are underage parties. Calls to my house have gone on MDT only because the trouble maker has a scanner too. Worse, he thinks he is a bigshot because he is a retired elementary school principal and buddies with the sheriff. He couldn't understand why he didn't hear the call the day they tresspassed him from my place...lol. He tried to get his buddy to "undo" it but that failed for him and his buddy. They couldn't get rid of the phone call nor the MDT traffic which is logged as well! So, even MDT traffic should be logged and not a way to escape issues
I remember hearing PA State Police one night at an abandoned factory talking about shooting stray cats. Someone with a scanner heard this and called someone. A month later, several troopers and local officers were indicted for their cat hunts. After that those kinds of things were kept off the air. I guess they didn't think certain channels were taped but they were. A couple lost their jobs, all others were demoted and all if them had to pay back the ammunition they wasted and claimed they used at the range. One was even told that as much time as he spent at the range he should be a much better shot..... he failed to qualify at his yearly qualifications and had to re qualify.

So basically, yes, there SHOULD be logs for everything, however tapes get lost just as evidence does, which is one reason things should be kept in the clear and one less means for the public to mistrust law enforcement and public safety.

One last thing is interoperability and encryption can cause havoc with that. Pretty sad when you don't even trust the neighboring departments to hear your comms, but even worse if it costs a life of an officer or civilian because no one knows what's going on next door.

>Question;
>
>If I were to lock down a BCD536HP on an encrypted channel and turn on record for a given time, the unintelligible transmissions would be recorded... and would be replayed without spaces between each transmission? And if the agency running the encrypted channel in question were also recording with a "like" type of recorder that does not record between transmissions, the total amount of transmissions for a given length of time should be equal, or close, upon comparing how much the scanner received vs the "official" agency recording. If this can be assumed, any public committee set up to review these encrypted playbacks would be able to determine if anything was erased or being withheld. Does that sound correct?
>
>
>Just like Nixon after the Watergate scandal. The audio tapes from the Oval Office were missing quite a few minutes when a determination was being made about Nixon having prior knowledge of the Watergate break-in.
>
>
>So I'm wondering if this recording comparison would be possible. It seems feasible to me. What also sounds reasonable is given the fact, as you say, the level of corruption in today's society, which is evident at all levels (Nixon), the understanding anyone using an encrypted system has (that the transmissions are recorded), they deserve to be caught and charged with gross stupidity!... for using a system they know is recording every word they utter. But true, there are times we would all like to take back something we said, and doctoring the recordings is one of the ways people try to make things go away.
>
>
>I believe there is a need to pass "sensitive" information in an expeditious manner, some use encryption, others use MDT's and cell phones. Not a big fan of it because it affords improper use of the comm system and in turn, the need of an oversight committee.
>
>
>Interesting that no one is complaining about not knowing what is going on when MDT's or cell phones are used for official police business. It's only the encrypted stuff on frequencies a scanner can hear that we are concerned with... Wondering why that is? That's where all the juicy stuff is!

John, I think you're missing the original poster's (Mark's) question entirely... He asked about the area of RadioReference.com where he could ask a question or obtain information about the system(s) in question. That's the forum areas in the state-specific are - particularly Indiana http://forums.radioreference.com/indiana-radio-discussion-forum/ http://forums.radioreference.com/indiana-radio-discussion-forum/

From what I can gather from reading in the Indiana forums, the old (not that old) Indiana Safe-T system is being upgraded to the new APCO P25 Phase-II TDMA system in certain areas. Lake County is one of them and it's shown in the database as the Lake County Public Safety system http://www.radioreference.com/apps/db/?sid=8384 http://www.radioreference.com/apps/db/?sid=8384 which indicates it used only 10 frequencies county-wide and they're all simulcast from small, short-range cells which are individually addressed.

Mark, you'll want to check out the forums for Indiana located at Indiana Radio Discussion Forum - The RadioReference.com Forums http://forums.radioreference.com/indiana-radio-discussion-forum/

http://forums.radioreference.com/indiana-radio-discussion-forum/

Indiana Radio Discussion Forum - The RadioReferen... http://forums.radioreference.com/indiana-radio-discussion-forum/ Indiana Radio Discussion Forum - Forum for discussing Radio Information in the State of Indiana.

View on forums.radioreference... http://forums.radioreference.com/indiana-radio-discussion-forum/ Preview by Yahoo

and read up on the several public safety trunked radio systems in use or being rolled out.

This Phase-II TDMA system has had recent updates and may be so fluid that from day to day it may be somewhat different. Mark's Uniden BCD-536HP should be able to receive the system provided he's within the intended area of coverage and has a good external antenna. To keep your scanner updated you may want to purchase some other scanner programming software other than the free Uniden Sentinel software. ARC536PRO might fit the bill as it downloads directly from RadioReference (if you have a paid RR subscription) and will be up to a week 'newer' information than what Uniden has in their weekly download. ARC536PRO can be purchased from the publisher here -> http://www.butel.nl/products/arc536/arc536.html http://www.butel.nl/products/arc536/arc536.html

This Phase-II TDMA deployment is newer, Mark, and has more restrictions on how well (or even IF) you can receive the system from any particular place. Some limitations are:

1 - The scanner must be within the range of the cells defined in the system. Outside those cells of coverage, simulcast reception distortion can often prevent the scanner from working. If a call comes from a zone adjacent to the zone you're in, you may not hear it

due to the simulcast time differences destroying the digital stream of P25 audio - even with a good outside antenna. The system is designed to only cover the INTENDED AREA OF COVERAGE reliably. If you're not in the intended area, you'll have difficulty decoding the bit-streams.

2 - The system controllers direct calls to certain cell zones only when a subscriber radio is located within that zone and registers with the system. In other words, if a police officer calls the dispatcher in the zone you're located in, you will hear that zone's controller and cell sites rebroadcast the call. If you're not in that zone, you probably won't hear anything. When a dispatcher calls a particular officer or group, it will probably go out on the entire system but their responses will only be heard within their own zones (usually). This is for spectral efficiency and allows the county to use only 10 frequency county-wide. It works with their subscriber radios but might cause scanner to fail to decode or hear nothing if in the wrong zone of coverage.

3 - Some talkgroups will be encrypted - no scanner can hear an encrypted talkgroup.

4 - A system like this, which is brand new and very "fluid" will often change drastically days or weeks (or longer) before RadioReference gets contributions from users "in the know" who update the database. It's not unusual for a system which is in-flux like this to not be accurately depicted on RadioReference (and therefor in Uniden's copy) for months or years. All data in the RadioReference database is USER-CONTRIBUTED so it can only be as accurate as our excellent contributors make it. Most systems do not have any inside information on talkgroups or cell locations to the RR database is more sparse and lags behind actual system configuration.

Have patience and keep your scanner updated weekly while the system is being built-out. Till it's complete, there may be a mixture of the original SAFE-T use and Lake County Public Safety use in your area. Until it's finalized, you will often be disappointed at what you hear (or don't hear). If you think you're frustrated - how'd you like to be a Public Safety officer in that area and have all sorts of issues getting in contact with your dispatcher???

Unfortunately, it looks like even with a new BCD-536HP you're going to be frustrated and not hear much till the system is fully stabil and all cells are adjusted and turned on. And even then, you're going to get limited reception due to the cellularized nature of this new system with only 10 frequencies but hundreds of small cells which can be individually selected/deselected to carry particular traffic. I wish you luck and I hope my area never goes this route... It could signal the end of scanning as we know it.

Bob - KB1VUA

No, he is asking about the LAKE COUNTY P25 PHASE II system. IF you look at the county page that IS the system he needs help with.
In fact this is the system he is asking about:
http://www.radioreference.com/apps/db/?sid=8384

The department's he wants are on this system.

Mark's Uniden BCD-536HP should be able to receive the system provided he's within the intended area of coverage and has a good external antenna. To keep your scanner updated you may want to purchase some other scanner programming software other than the free Uniden Sentinel software. ARC536PRO might fit the bill as it downloads directly from RadioReference (if you have a paid RR subscription) and will be up to a week 'newer' information than what Uniden has in their weekly download. ARC536PRO can be purchased from the publisher here -> http://www.butel.nl/products/arc536/arc536.html
>
>
>This Phase-II TDMA deployment is newer, Mark, and has more restrictions on how well (or even IF) you can receive the system from any particular place. Some limitations are:
>
>
>1 - The scanner must be within the range of the cells defined in the system. Outside those cells of coverage, simulcast reception distortion can often prevent the scanner from working. If a call comes from a zone adjacent to the zone you're in, you may not hear it due to the simulcast time differences destroying the digital stream of P25 audio - even with a good outside antenna. The system is designed to only cover the INTENDED AREA OF COVERAGE reliably. If you're not in the intended area, you'll have difficulty decoding the bit-streams.
>
>
>2 - The system controllers direct calls to certain cell zones only when a subscriber radio is located within that zone and registers with the system. In other words, if a police officer calls the dispatcher in the zone you're located in, you will hear that zone's controller and cell sites rebroadcast the call. If you're not in that zone, you probably won't hear anything. When a dispatcher calls a particular officer or group, it will probably go out on the entire system but their responses will only be heard within their own zones (usually). This is for spectral efficiency and allows the county to use only 10 frequency county-wide. It works with their subscriber radios but might cause scanner to fail to decode or hear nothing if in the wrong zone of coverage.
>
>
>3 - Some talkgroups will be encrypted - no scanner can hear an encrypted talkgroup.
>
>
>4 - A system like this, which is brand new and very "fluid" will often change drastically days or weeks (or longer) before RadioReference gets contributions from users "in the know" who update the database. It's not unusual for a system which is in-flux like this to not be accurately depicted on RadioReference (and therefor in Uniden's copy) for months or years. All data in the RadioReference database is USER-CONTRIBUTED so it can only be as accurate as our excellent contributors make it. Most systems do not have any inside information on talkgroups or cell locations to the RR database is more sparse and lags behind actual system configuration.
>

>
>Have patience and keep your scanner updated weekly while the system is being built-out. Till it's complete, there may be a mixture of the original SAFE-T use and Lake County Public Safety use in your area. Until it's finalized, you will often be disappointed at what you hear (or don't hear). If you think you're frustrated - how'd you like to be a Public Safety officer in that area and have all sorts of issues getting in contact with your dispatcher???
>
>
>Unfortunately, it looks like even with a new BCD-536HP you're going to be frustrated and not hear much till the system is fully stabil and all cells are adjusted and turned on. And even then, you're going to get limited reception due to the cellularized nature of this new system with only 10 frequencies but hundreds of small cells which can be individually selected/deselected to carry particular traffic. I wish you luck and I hope my area never goes this route... It could signal the end of scanning as we know it.

Also the rollout on Phase 1 of the statewide system is not until the 28th of this month and Phase II after that, probably a month or two. But that's not the system he needs for what he is looking for anyway.

Are you running AVG Anti Virus software by any chance? That program is known to interrupt TCP (and maybe UDP) traffic.

Add to all that the government 'at large' lately heavily clamping down on the FOIA requests from media and the public and not wanting to release much of anything. We're heading down the dangerous road of law enforcement and government ONLY passing on the information they want us to know and only when they want to. Everything else they call it "national security", "sensitive" and all those ambiguous/vague terms.

In my neck of the woods, they seem to keep finding millions to encrypt and maintain their communication equipment tighter than the military in a war zone in the Middle East. And yet they've been having to close several posts, get rid of the few helicopters they have for search and rescue, cut down on officers, etc. Many of the small towns are left without reasonable police coverage, if at all. Many of the "other" smaller first responder agencies still can't afford newer/better equipment or radios, the State is going broke but that's OK as long as people can't hear the police making traffic stops and the like. Sure as heck sounds to me like they care more about themselves first than about the tax-paying citizens that they work for and were hired to protect...

In Connecticut, as I assume with all states, there are available freqs for police activity that are not necessarily listed under individual departments. Instead, licensed under the state, regional agencies or part of federal agencies such as Homeland Security. There are also other unpublished freqs available. So when consulting RR, the freqs listed under a specific town may not include a particular surveillance channel in use. And when they use low powered radios, especially when it's an unpublished freq, sometimes the quickest way to "capture" the freq is to use the "Close Call" feature. But a word of caution... If the police are involved in a stake-out, they are there "observing". That means driving by or walking down the block will most assuredly get you noticed! Not a good thing! You just got yourself posted on their "list" of suspicious characters.

I listened to a drug investigation. It was a multi-agency operation in Hartford, Ct. They were using radios in the clear on simplex channels that were assigned to narc squads and published as such under the City of Hartford. And I do not believe they were low power because I was some distance away. That use of published freqs was not too smart! If I could hear them simply by downloading what was listed under the City, me not being one interested in capturing the narc squad comms, anybody could listen in. I mentioned what I had captured to my neighbor, a State Police Sgt. He made a call. But they continued using the freq. At least they now knew, if they didn't before, they could be overheard. I've been told the use of FRS has also been used. I can't verify that, nor would I care to. I'm "Fire" oriented.

That's a good example of when encryption is necessary. But, that's why
you have narcotics channels separate from dispatch channels. Low power
and off-trunk is also a good idea. I would even go so far as to suggest
a different radio band be used.

I have to ask why busts were not planned in an office and the only radio
use required was "All units - Go!" which is too late for it to be of any
use to anyone else. Are you talking about surveillance? Again, you
obviously don't want that on your dispatch channels.

The issue is when they choose to encrypt everything (unlike your case).

John,

You bring up a good point. The safety of officers... Yes, a lot of ears might catch an incorrect comm that would put an officer in jeopardy. But by and large, the justification for encryption has to do with that very safety aspect you relate to-of officers and the general public.

A neighborhood prowler call transmitted in the open might get me to take a peek out my window and inform the police if I saw something but the police can't depend upon citizens using common sense. There are those who think grabbing their gun, going outside to do a perimeter check is the thing to do. It wouldn't be the first time a cop was shot at, a homeowner thinking he was the prowler, or vice versa!

The police respond with only the info provided by dispatch. The call is for a prowler. That's a total of two people involved... The cop and suspected prowler. When we take it upon ourselves to "get involved" we add to the total count of people the cop needs to take into account, SOP's dictate sending a larger response if/when the cop realizes this. The next thing you know, there's four guys with guns, both good and bad. The odds of somebody using their weapon increases geometrically, meaning the chances of someone getting hurt just jumped from a level of checking on a neighbor chasing his dog through the next door backyards, to officers now more concerned with their own safety, guns drawn. It happens... More than we care to think about.

So, if fortunate to live in a district that doesn't use encryption, and you find it necessary to phone the cops with pertinent information prompted by something we hear on the scanner, we must obey the dispatcher's instructions to remain indoors, or whatever they tell us. It's for the safety of all. They've already done the math. One cop plus one prowler equal a total of two people who could possibly be hurt. Us adding to that total is just plain stupidity at its worse.

Just sayin...

Bill

On Jun 9, 2016, at 6:14 PM, John johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

True, although I don't think the recording of ENC would help as most scanners are set to avoid those transmissions. Never tried recording one though.

Here in my County some calls are sent via MDT it even pager as some officers don't have MDT's. Usually those calls are for bigshots and very far and few between. Some too are underage parties. Calls to my house have gone on MDT only because the trouble maker has a scanner too. Worse, he thinks he is a bigshot because he is a retired elementary school principal and buddies with the sheriff. He couldn't understand why he didn't hear the call the day they tresspassed him from my place...lol. He tried to get his buddy to "undo" it

but that failed for him and his buddy. They couldn't get rid of the phone call nor the MDT traffic which is logged as well! So, even MDT traffic should be logged and not a way to escape issues
I remember hearing PA State Police one night at an abandoned factory talking about shooting stray cats. Someone with a scanner heard this and called someone. A month later, several troopers and local officers were indicted for their cat hunts. After that those kinds of things were kept off the air. I guess they didn't think certain channels were taped but they were. A couple lost their jobs, all others were demoted and all if them had to pay back the ammunition they wasted and claimed they used at the range. One was even told that as much time as he spent at the range he should be a much better shot..... he failed to qualify at his yearly qualifications and had to re qualify.

So basically, yes, there SHOULD be logs for everything, however tapes get lost just as evidence does, which is one reason things should be kept in the clear and one less means for the public to mistrust law enforcement and public safety.

One last thing is interoperability and encryption can cause havoc with that. Pretty sad when you don't even trust the neighboring departments to hear your comms, but even worse if it costs a life of an officer or civilian because no one knows what's going on next door.

"N1CHU n1chu@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

John,

Question;
If I were to lock down a BCD536HP on an encrypted channel and turn on record for a given time, the unintelligible transmissions would be recorded... and would be replayed without spaces between each transmission? And if the agency running the encrypted channel in question were also recording with a "like" type of recorder that does not record between transmissions, the total amount of transmissions for a given length of time should be equal, or close, upon comparing how much the scanner received vs the "official" agency recording. If this can be assumed, any public committee set up to review these encrypted playbacks would be able to determine if anything was erased or being withheld. Does that sound correct?

Just like Nixon after the Watergate scandal. The audio tapes from the Oval Office were missing quite a few minutes when a determination was being made about Nixon having prior knowledge of the Watergate break-in.

So I'm wondering if this recording comparison would be possible. It seems feasible to me. What also sounds reasonable is given the fact, as you say, the level of corruption in today's society, which is evident at all levels (Nixon), the understanding anyone using an encrypted system has (that the transmissions are recorded), they deserve to be caught and charged with gross stupidity!... for using a system they know is recording every word they utter. But true, there are times we would all like to take back something we said, and doctoring the recordings is one of the ways people try to make things go away.

I believe there is a need to pass "sensitive" information in an expeditious manner, some use encryption, others use MDT's and cell phones. Not a big fan of it because it affords improper use of the comm system and in turn, the need of an oversight committee.

Interesting that no one is complaining about not knowing what is going on when MDT's or cell phones are used for official police business. It's only the encrypted stuff on frequencies a scanner can hear that we are concerned with... Wondering why that is? That's where all the juicy stuff is!

"They seem to find millions to encrypt"...

Not even close. Unless the comm system is NOT in need of upgrading. True, replacing an entire system with a trunked digital system can cost millions, but if it's time for an upgrade, manufacturers are literally giving away encryption as an incentive to buy their stuff. It cost next to nothing when encryption is included on today's digital systems.

If you know of an agency who proposes this type of expensive upgrade solely for the purpose of encryption, it's time to get involved. Gather the facts, alert the news media, get involved with local, regional and state government agencies associated with the proposed purchase and notify your govt reps on all local and state levels. Because that amount of money is not justified by encryption alone.

One last note... A lot of agencies rely upon the radio dealers who sell and maintain their gear to advise going forward. Dealers will tell you the stuff you currently operate is outdated, parts no longer made, etc. NEVER trust the guy who wants to sell you on replacing. He is driven by HIS bottom line, not yours. Hire an independent consultant who will have YOUR interests at heart.

Everything else they call it "national security", "sensitive" and all those ambiguous/vague terms.

In my neck of the woods, they seem to keep finding millions to encrypt and maintain their communication equipment tighter than the military in a war zone in the Middle East. And yet they've been having to close several posts, get rid of the few helicopters they have for search and rescue, cut down on officers, etc. Many of the small towns are left without reasonable police coverage, if at all. Many of the "other" smaller first responder agencies still can't afford newer/better equipment or radios, the State is going broke but that's OK as long as people can't hear the police making traffic stops and the like. Sure as heck sounds to me like they care more about themselves first than about the tax-paying citizens that they work for and were hired to protect...

The reason encryption discussions are generally truncated on scanner newsgroups is that they invariably degenerate into a mass of emails that are not really related to using, understanding, supporting, or enhancing the scanner itself.
I'll give everyone until noon to have their say, but then I'm going to lock down the group for a while and reject any messages related to encryption, the politics of encryption, the economics of encryption, the morality of encryption and the like. "They seem to find millions to encrypt"...
Not even close. Unless the comm system is NOT in need of upgrading. True, replacing an entire system with a trunked digital system can cost millions, but if it's time for an upgrade, manufacturers are literally giving away encryption as an incentive to buy their stuff. It cost next to nothing when encryption is included on today's digital systems.
If you know of an agency who proposes this type of expensive upgrade solely for the purpose of encryption, it's time to get involved. Gather the facts, alert the news media, get involved with local, regional and state government agencies associated with the proposed purchase and notify your govt reps on all local and state levels. Because that amount of money is not justified by encryption alone.
One last note... A lot of agencies rely upon the radio dealers who sell and maintain their gear to advise going forward. Dealers will tell you the stuff you currently operate is outdated, parts no longer made, etc. NEVER trust the guy who wants to sell you on replacing. He is driven by HIS bottom line, not yours. Hire an independent consultant who will have YOUR interests at heart.

3395. Can't apply my DMR upgrade key

Yahoo group: BCD536HP
Date: 2016-06-10 12:59:37 UTC
From: gic900@...
Topic: 3395 Message: 3395

On the scanner, press MENU.
Select Settings --> Upgrades, then press E.

Scroll to DMR/MotoTRBO Upgrade, then press E.
Using the scroll knob to select each digit and the 4 and 6 keys to move left and right, enter each digit in the unlock key (including the hyphens between digit groups). Then, press E.

With the above instructions, I can't scroll to the DMR/MotoTRBO Upgrade
because it is not shown on the display.
Only choice offered there is Upgrade ProVoice.

In Sentinel, I have updated the firmware and database.

Is Sentinel ver 1.06 (Rev 00) the latest version?
Thanks

>
>In Connecticut, as I assume with all states, there are available freqs for police activity that are not necessarily listed under individual departments. Instead, licensed under the state, regional agencies or part of federal agencies such as Homeland Security. There are also other unpublished freqs available. So when consulting RR, the freqs listed under a specific town may not include a particular surveillance channel in use. And when they use low powered radios, especially when it's an unpublished freq, sometimes the quickest way to "capture" the freq is to use the "Close Call" feature. But a word of caution... If the police are involved in a stake-out, they are there "observing". That means driving by or walking down the block will most assuredly get you noticed! Not a good thing! You just got yourself posted on their "list" of suspicious characters.
>
>
>I listened to a drug investigation. It was a multi-agency operation in Hartford, Ct. They were using radios in the clear on simplex channels that were assigned to narc squads and published as such under the City of Hartford. And I do not believe they were low power because I was some distance away. That use of published freqs was not too smart! If I could hear them simply by downloading what was listed under the City, me not being one interested in capturing the narc squad comms, anybody could listen in. I mentioned what I had captured to my neighbor, a State Police Sgt. He made a call. But they continued using the freq. At least they now knew, if they didn't before, they could be overheard. I've been told the use of FRS has also been used. I can't verify that, nor would I care to. I'm "Fire" oriented.

Topic: 3395 Message: 3407

Thank you Joe for the URL's and prerelease information.Using the instructions below, I now have the BCD536HP_v1_11_88.bin file on my computer.But now, how do I copy that bin file to the "firmware" directory that already exists on the scanner?I don't see instructions to accomplish that.
To apply the update, first unzip BCDx36HP_V1_11_08.zip and use the password (which is the last word of item 3, above, including punctuation). Then, copy the appropriate "bin" file to the "firmware" directory that already exists on your scanner. Finally, cycle power.

From: bob.peloquin@...
Topic: 3395 Message: 3409

Unfortunately, not everyone has two brain cells to rub together when it comes to computers. The vast majority of the people using the pre-release firmware have the computer knowledge to know how to find their way around the scanner's SD card. Some, who probably shouldn't be fooling with pre release firmware, do not have the skills required.

The firmware folder is inside the BCDx36HP folder on the SD card. Plug your USB cable into the scanner and press the (E yes) button to activate USB Mass Storage mode. A new disk drive will appear in your file manager - open that drive and navigate to the BCDx36HP folder. You will see two already existing files named starting with city_table and zip_table. Paste the extracted firmware .bin file here and close the drive window. Eject the scanner from your system either by using the eject option when right-clicking on the drive letter or by using the safely-remove-hardware button on your taskbar near the clock.

Unplug the USB cable and wait for the scanner to load the new firmware. Have fun...

Thank you so much for the instructions Bob. That worked just fine. I was able to enter my DMR key.And you are right, I shouldn't be fooling with the pre release firmware.But I'm 71 and still like to learn something new every day :-)Tomorrow I'll try to learn how to program a DMR system. Mike

Subject: Re: [BCD536HP] Can't apply my DMR upgrade key

Unfortunately, not everyone has two brain cells to rub together when it comes to computers. The vast majority of the people using the pre-release firmware have the computer knowledge to know how to find their way around the scanner's SD card. Some, who probably shouldn't be fooling with pre release firmware, do not have the skills required. The firmware folder is inside the BCDx36HP folder on the SD card. Plug your USB cable into the scanner and press the (E yes) button to activate USB Mass Storage mode. A new disk drive will appear in your file manager - open that drive and navigate to the BCDx36HP folder. You will see two already existing files named starting with city_table and zip_table. Paste the extracted firmware .bin file here and close the drive window. Eject the scanner from your system either by using the eject option when right-clicking on the drive letter or by using the safely-remove-hardware button on your taskbar near the clock. Unplug the USB cable and wait for the scanner to load the new firmware. Have fun...

Bob, KB1UVA,

You wrote;
"Unfortunately, not everyone has two brain cells to rub together when it comes to computers."

Boy, ain't that the truth! I spent the last part of my employment before retiring, working for a defense contractor in their classified computer environment as an IAO (Information Assurance Officer) managing computer security. As such, administrative privileges were necessary, giving me the ability to access any file/directory at any level. I worked within the GUI but on occasion reverted back to the DOS command file structure. I knew computers... At least well enough to be comfortable with performing the DMR upgrades Paul has provided. But I guess my knowledge base has slid enough in the 5 years since retirement that I decided to take Paul's advice and wait for Uniden to finalize the release. I got as far as dropping the .bin file into the firmware directory. The radio now shows its ready for the manual programming of DMR and the Excel spreadsheet worked with editing it to the Lat/long and range parameters and control/shift U. But the freqs I was left with were numerous (after omitting duplicates) and the two I picked to research on the FCC database did not reveal they were DMR. Instead, those two freqs came back assigned to local conventional systems.

Apparently, my two brain cells needed for "rubbing together" had also retired! It's like they went missing at the same time all of my Special Program security briefings and secret/top secret clearances were dropped! ...wondering how they do that... Oh well, chalk it up to Alzheimer's!

I have a TYT 380 DMR 440MHz radio with the code plug for Ct. Skywarn anyway, so I can wait for discovering any additional systems in my local.

Dirty Harry said "A man's got to know his limitations".

Bill

Some of us have also commented on RR.com about this. It seems we used to get more hits on the LCN Finder before the latest release. I used to get the control channel LCN right away and now not even that. Reception and decoding of the voice channels in general however, seems to be better now.

Maybe it’s my imagination, but my primary Moto Phase II (TDMA) county system (http://www.radioreference.com/apps/db/?sid=6341) now sounds more “robotic” since the beta/preview 3 MotoTRBO release. Nothing bad or unintelligible, just somewhat more robotic. Again, it could be my imagination, but I thought I would throw it out there in case it’s not just me.

OK, I give up. I have followed all the instructions with the "bin" file and copied it to the firmware folder and updated the firmware on the 536 (and entered the DMR key.) It said it was successful and I have programmed some DMR frequencies into the scanner. It is not de-coding any of the traffic. What is wrong? Is it operator error again? I am left with only one brain cell and not the "two" to rub together?

3426. DMR pre-release firmware

Yahoo group: BCD536HP
Date: 2016-06-12 10:19:30 UTC
From: n1chu@...
Topic: 3426 Message: 3426

Noticed...

After installing the #2 pre-release upgrade on my BCD436HP I noticed very short blips of audio while scanning my programmed FL. They seem to happen only on trunked P25 analogue systems. They do cause the scanner to stop and resume after the default 2 second wait period. I haven't attempted to manually program a DMR channel as yet, so the scanner has only had the .bin file dropped into the firmware file onboard and allowed to load.

Wondering if this is one of the upgrades the #3 pre-release dealt with? Since I have decided to forgo any attempts to program DMR until the finalized release of the upgrade, I haven't bothered to try the #3 pre-release. Since these audible "blips" I'm experiencing happen rarely, it's not bothersome to me. I post this solely as an observance, wondering if anyone else has also experienced it?

Bill

Oops! Sorry about that. One of the systems I observed was Bristol Ct. They run a trunked system... And I thought it was a trunked P25 system. RR lists it as Motorola Type II Smart Zone.

Bristol runs Moto Type II P25 encrypted PD while Fire, EMS and PW are in the clear.

Blips of data may be indicative of P25 settings that need tweeking, or the unit not muting the PD as it should.

Subject: Re: [BCD536HP] DMR pre-release firmware

Oops! Sorry about that. One of the systems I observed was Bristol Ct. They run a trunked system... And I thought it was a trunked P25 system. RR lists it as Motorola Type II Smart Zone.

I have not found any drop-down menu item, modulation type, or anything else that indicates there is a choice for DMR. The system is entered as conventional (only one frequency that I am interested in listening to.)
Thanks,
Steve

It's set when you program the system. (Conventional, MotoTRBO, Etc)

But, you said it's programmed as a conventional channel. Are you sure it
is a conventional channel?

MotoTRBO is not in the pull down list as an option for system type.

Topic: 3395 Message: 3433

Your key may not have been entered correctly then.

You did enter it for DMR and are using the correct firmware, right? I only ask because others have tried entering it as ProVoice and failed.

When you create a new system, the choices should be as follows:
P25 Trunk
P25 X2-TDMA
P25 One Frequency
Motorola
DMR/MotoTRBO trunk
EDACS
LTR
Conventional

The two that are applicable to DMR are Conventional and DMR/MotoTRBO trunk, and you have to select the correct mode for it to work correctly.

If your key is not entered correctly or you are not using the pre-release firmware, the DMR/MotoTRBO trunk option will not be there and your scanner will not decode DMR.

Nope. I entered it under DMR and the scanner quickly stated something like it was "active or successful" and now says that "DMR/MotoTrbo has already been activated."

On Sunday, June 12, 2016 4:21 PM, "MCH mch@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

From: Garret Canter
Topic: 3395 Message: 3436

Just the normal system types: P25 TRUNK, P25 X2-TDMA, P25 Obe Frequency, Motorola, EDACS, LTR, Conventional.No option for DMR/MotoTrbo

On Sunday, June 12, 2016 9:53 PM, "Uniden UPMan uniden.upman@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

So, what is listed in the menu when you create a system?

Subject: Re: [BCD536HP] Can't apply my DMR upgrade key

Nope. I entered it under DMR and the scanner quickly stated something like it was "active or successful" and now says that "DMR/MotoTrbo has already been activated."

On Sunday, June 12, 2016 4:21 PM, "MCH mch@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

Your key may not have been entered correctly then.

You did enter it for DMR and are using the correct firmware, right? I
only ask because others have tried entering it as ProVoice and failed.

When you create a new system, the choices should be as follows:
P25 Trunk
P25 X2-TDMA
P25 One Frequency
Motorola
DMR/MotoTRBO trunk
EDACS
LTR
Conventional

The two that are applicable to DMR are Conventional and DMR/MotoTRBO
trunk, and you have to select the correct mode for it to work correctly.

If your key is not entered correctly or you are not using the
pre-release firmware, the DMR/MotoTRBO trunk option will not be there
and your scanner will not decode DMR.

Garret,
Are you using the scanner menu or using the Sentinel software when you see the system types. You mentioned "drop down list" which is a term more associated with software.

3439. BCD536HP General Question

Yahoo group: BCD536HP

From: Kajj 1
Topic: 3439 Message: 3439

General Question for the Group.

Can you purchase the BCD536HP already with the ProVoice, DMR and latest Firmware already installed?

Or do you have to purchase the scanner 1st, then send it back to have it all done at once or what?

Thanks' in advance.

3440. Computer No Longer Recognizes 436HP or 536HP

Yahoo group: BCD536HP
Date: 2016-06-13 20:48:04 UTC
From: Tim Ferguson
Topic: 3440 Message: 3440

I connected my BCD536HP to my computer to change a Favorites list and update it to the scanner, and it does not appear on any computer I try. I switched to the BCD436HP and it did the same. Both scanners went to the “USB Mass Storage” screen, but nothing appeared on the computer.

Could I suddenly have a bad cable?

Thanks!

Some dealers will preinstall it for an additional fee. But, updating the firmware is not difficult, nor is purchasing and applying the keys to enable those features.
In neither case do you have to send it back anywhere for the upgrades. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Shut down your computer. Pull the A/C plug. Discharge the power supply by pushing the power button. Replug it. Reboot.your computer. That is a symptom of problems with the USB - happens frequently on my Dell.

ScannerMaster and (I'm pretty sure) other retailers will be happy to install the various updates for the 436/536 scanners for a fee.

If you have a Windows computer you can do the firmware and database updates yourself for free. The added-value DMR and ProVoice updates can also be added as long as you have already done the required firmware updates. You would pay (for now...) $50 for each update (ProVoice & DMR) to Uniden and receive a product key you enter into the radio from its keyboard. It is pretty simple.

That all being said, if you do not have a Windows computer then these retail updates might be worth it to you. We sell update services to a lot of people that either cannot do the updates themselves or just prefer to have it done for them. We are happy to do it since we make money on it but are just as happy to sell you the radio and let you do it yourself if you wish.

If you can't do it yourself you can do the following:
1: pay a retailer to do it
2: have someone locally do it

The latter is the cheapest usually. I know one guy (not me) who would charge you a beer or two.
The advantage of someone local is, besides being cheaper it is usually better in that you see how to do it and you get exactly what you want program wise and can always call when you need help.
No joke, I have had people call at 1am!

Possible. Does Device Manager show
anything different when you plug them in?

Many times the serial driver gets installed for both modes.

Subject: Re: [BCD536HP] BCD536HP General Question

Some dealers will preinstall it for an additional fee. But, updating the firmware is not difficult, nor is purchasing and applying the keys to enable those features.

In neither case do you have to send it back anywhere for the upgrades.

Firmware is 1.11.09
How can you totally reset the scanner to where it is a factory reset? Will the final upgrade rectify these problems to finally get me where I belong? I am pretty tired of messing with it now.
Thanks,
Steve

The cheapest route to take;

Local help for free is #1... For the reasons expressed in another post... Attempting to do it yourself (as Paul referred to) is #2... My preference... Purchasing from a dealer that will program for a fee is #3.

If no one is available locally, you may try #2. As Paul stated, it's an easy step by step process and it will only cost the price of the scanner, plus the two additional key charges, one for ProVoice and one for DMR.

I should note purchasing the ProVoice and DMR keys at the same time the scanner is purchased from a dealer such as Scannermaster may or may not get the scanner set up to be ready to listen to these options. I'm sure the salesman will ask you if you would like them to activate the scanner's new options however. But you may end up with a scanner and two keys, leaving the activation process up to you. Call them to learn if their doing the activation process incurs an additional fee.

Scannermaster has a programming service (which may or may not include activation of your two keys, again this only sets the scanner up to be ABLE to receive ProVoice and DMR. It does not load the scanner with any ProVoice/DMR systems.) Once your scanner has been ProVoice/DMR upgraded, Scannermaster's programming service (traditionally) then deals with loading the scanner with frequencies and all other necessary parameters (settings) for the stuff you care to monitor. If you choose to ask them to do it.

I'm trying to separate the two needs you are looking for. One being how to get and install keys for the optional ProVoice and DMR, the other is the loading of the scanner with the services you want to listen to. Below, I offer some insight on the latter...

As an example I use Scanner Master. They will do all that you have asked for, for a fee. But before you have to pay others to program your scanner you should first know that Radioteference.com (RR) offers this for a subscription fee, allowing you to download the radio systems you are interested in from their website to your computer and scanner with the Sentenel software and USB cable, both provided by Uniden with the scanner, and included in the scanner purchase cost. This is the preferred programming method. It saves you the trouble of sending the scanner back to whomever you had program it and paying another programming fee when you wish to add additional stuff. (I don't know if Scannermaster offers their programming service as a lifetime one charge fee-if I had to guess I'd say no-but having to return the radio to them in order to re-program it is a hassle, being without your scanner, and incurs additional shipping & insurance costs.) RR gives you the ability to make your own changes by simply choosing what comm systems you want to listen to and downloading them into your scanner in a matter of minutes. Your scanner was deliberately designed to avail itself of this type of download. It's a foregone conclusion you will be wanting to add systems that you may have forgotten to request when others load your scanner for you.

Please forgive me if I'm preaching to the choir. I'm assuming you're new to the hobby. Downloading a copy of Uniden's owners manual will give you a better understanding of how

scanner manufacturers use RR to make the chore of programming easier... Much faster and immensely easier.

Hope this helps,

Bill

You can reset user settings in the main menu under settings or you can use Sentinel to to reformat your SD Card. Sentinel loads factory settings to the card after formatting so the scanner can communicate with Sentinel going forward. I'd like confirmation on this from the others in the group please...

ScannerMaster does indeed install the keys as part of the paid service when the DMR or ProVoice options are selected. I would think the other dealers do so as well.

I usually suggest that people do the updates themselves if they are able so they know how and will explain the process to them but I am surprised by how many people still prefer us to do it for them.

As far as DMR programming itself goes, until the firmware is publicly available of course there is little we can do. Once it is available customers that select the DMR option will have identified DMR systems installed. Since DMR monitoring is a new thing the databases are still pretty raw and as they mature more accurate data will be available to install into the radios.

3452. Re: Radio reference forum??How to find my area for a question on talk groups, programming?

Yahoo group: BCD536HP
Date: 2016-06-14 17:12:54 UTC
From: queenhorserider@...
Topic: 3074 Message: 3452

Bob,originally I was using my BCD996XT to monitor the lake County Indiana Systems,Local Police,Fire County,State Troopers,everything. One day,I heard nothing,and my daughters boyfriend is a Lieutenant in a area fire dept. and he told me they upgraded their radio systems.So I had to upgrade my scanner to the Trunk tracker V Phase I and II to receive the new system. My local and area wide system is the Lake County Public Safety,which is now a Project 25 Phase II,
APCO-25 Common Air Interface Exclusive (System Voice).,All the Modes for the the Talk groups are a T,and it mentions on the page that some of the Talk Groups may have to be monitored by TDMA modulation,in which I am told this should not make any difference when downloading the info from Centinel,should still work with the P-25 Phase II system.
I know that all the control channels are on the scanner,I can see them when I mess around with the options,and all the Talk Group DEC group numbers are on the scanner,all of what I want to listen to has a ON next to it,my range is set to 0,Custom one is ON.I have a outside Diamond 25 MHz to 1300 MHz antenna up about 40 feet,and always worked with my BCD996XT like a champ,I can even pick up Chicago,being 27 miles from downtown Chicago.What the problem is I cannot receive any of the Talk Groups from the Lake County Public Safety,in which I did when I used mu other scanner for the Phase I in our community for Fire and Police.
I am using the ARC536PRO trial software,not many days left,but I cannot get this software to work either,and cannot figure how to get the Custom 1 to turn ON.It seems like everything I try does not work,no receive from this Lake County Public Safety,,,NOTE, , , .Indiana Project Hoosier SAFE-T (Motorola),and the Indiana Project Hoosier SAFE-T (Project 25) I pick up a few odds and ends,especially the Motorola System seems to pick up,and a few Project 25,,,,which this is a PHASE I Project-25,,,,,,,,,,,,,,,,,,,,But Cannot pick up the System II need local Police and Fire,County,State,from Lake County Public Safety,PROJECT-25 PHASE II,this is my issue,,,Centinel won't help and the ARC536PRO does not seem to make a difference,and I do not change or mess with any settings at all,,,Still lost,angry,mad,and my wife is getting sick of me complaining about everything.
And the Zip Code will not pick up locally,picks up Illinois,,,and when setting the Trunking Discovery under this Lake County Public Safety (Select System) and under the (Select Site) Countywide Simulcast,which comes up under the select site,do the settings,absolutely no hits at all,,nothing. Nothing under zip or Trunking Discovery....Any ideas,bad scanner,me,I even reset the scanner a few times,,it is all updated.
And I look at the scanner after downloading my stuff,,now it is saying 0% Memory used,Total size 28.95 GB,
Free Size 28.91 GB,,Firmware 1.10.02...SUM=118. M-Ver= 1..This is all I have to babble about,and I tried 3 SD cards,downloaded from the PC to scanner and tried the SD card adapter also,no difference.Anyone want to look at my SD card,or try to program my card ,and see if it me,us,or the scanner..I am lost....Mark,,THANK YOU GUYS FOR THE HELP,,KB9GTB

Thank you Bill for the in depth information.

It helps me and gives me a lot of options and things to think about.

I have been messing around with scanners since I got my 1st one. A single crystal plug-in frequency.

I have just about every scanner made except the 2 home patrols and the 2-X36's.

As far as RR goes, I am the one years ago who gave them their scanner info for The State of Alabama, Mobile County,

and after many years of keeping it up to date, then they wanted to charge me to use it

so I just don't bother with it any longer.

I believe I will take Paul's advice and go that route.

Thank You and Have a great day!

Thomas

Firmware is 1.11.09
How can you totally reset the scanner to where it is a factory reset? Will the final upgrade rectify these problems to finally get me where I belong? I am pretty tired of messing with it now.
Thanks,
Steve

John and Bob,Custom 1 is on,all my services are checked,range is at 0 and I am not using location control,I download the information from Centinel,double check everything. The control frequencies are there,Custom 1 ON,services are on,all is set on Centinal, and is put into the scanner.Still nothing from Lake County Public Service,no Cedar Lake,St.John,Lowell,Dyer,Crown Point,absolutely no receive from any of these towns for Fire,Police.
I do everything I was asked to check and do,and read,to no avail.I know the Radio Reference site tells me that some Systems may be using Project 25 Phase II TDMA Modulation,in which I was told this should not interfere with the Phase II.All of the Systems I want to monitor has a MODE of T,TDMA Capable Talk group,about everyone of what I want to monitor is a T MODE.
All I can tell everyone is I have everything I can think of,was told,and what I read,and assuming the Centinel software (Does Work),I do not know what to do or go next.Seems basic enough,Favorites,Download and Monitor turned ON,Services ON,Custom 1 ON,Quick keys set,all Firmware is up do date,HPDB up to date,(TODAY),load into the scanner from Centinel,and nothing at all.
Zip Code picks up some Illinois,only 3 miles from Will County.AND WHAT GETS ME MOST OF ALL,is the Trunking Discovery,all is in the scanner,under my select site,Countywide Simulcast,under Lake County Public Safety,I do the Trunking Discovery,and I get no hits at all,nothing,I know the Control Frequencies are in the scanner,but no hits.
To sum it up,should I call Uniden support and ask them and tell them I did everything possible? Still under warranty.I even tried a BCD996P2 scanner,and was not even to pick up anything either on the Lake County Public Safety,NOTHING...What am I missing,or do I need the DMR upgrade in Lake County Indiana?I am totally lost and confused,does someone want to see my SD card and check that is set to the way it should be,I would gladly mail it to you and pay return mailing,or meet up around you or me,Cedar Lake or close by.THANK YOU ALL,any more ideas,sick to my stomach..Thanks again to all,mark Bradley,,KB9GTB.
Have a great day my friends.....

If you decide to do it your self it is not that hard.
I just installed the Pro Voice on my 436hp and 536hp and it was just putting in the key number that you buy from Uniden. This is done by going to Menu / Settings / Upgrade / Upgrade ProVoice / and then enter the key.
 First when you go into Settings / Upgrade you will only see Upgrade Pro Voice only. After installing the bin data file for DMR you will then DMR/MotoTRBO will show up in the Upgrade file on the scanner.
I installed the DMR last night and that was not hard.You will find these 2 link vary helpful. http://forums.radioreference.com/uniden-tech-support/334302-bcdx36hp-dmr-preview-2-available.html
I found a you tube video that shows you how to install the DMR bin file on your scanner. Here is a link to the video: (https://www.youtube.com/watch?v=J1D8A8Jh4OQ)Afterinstalling the bin data file all you have to do is go to up Menu / Settings / Upgrade / Upgrade DMR/MotoTRBO and then enter the key.

Note: Make sure you copy/cut the right data file for your scanner since there are 2. BCD436HP_V1_11_08.bin and BCD536HP_V1_11_08.bin
Read the read me file. It helps a lot. I know it might sound hard be it isn't.

  ScannerMaster does indeed install the keys as part of the paid service when the DMR or ProVoice options are selected. I would think the other dealers do so as well.

I usually suggest that people do the updates themselves if they are able so they know how and will explain the process to them but I am surprised by how many people still prefer us to do it for them.

As far as DMR programming itself goes, until the firmware is publicly available of course there is little we can do. Once it is available customers that select the DMR option will have identified DMR systems installed. Since DMR monitoring is a new thing the databases are still pretty raw and as they mature more accurate data will be available to install into the radios.

On Tue, Jun 14, 2016 at 3:48 AM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The cheapest route to take;
Local help for free is #1... For the reasons expressed in another post... Attempting to do it yourself (as Paul referred to) is #2... My preference... Purchasing from a dealer that will program for a fee is #3.
If no one is available locally, you may try #2. As Paul stated, it's an easy step by step process and it will only cost the price of the scanner, plus the two additional key charges, one for ProVoice and one for DMR.

I should note purchasing the ProVoice and DMR keys at the same time the scanner is purchased from a dealer such as Scannermaster may or may not get the scanner set up to be ready to listen to these options. I'm sure the salesman will ask you if you would like them to activate the scanner's new options however. But you may end up with a scanner and two keys, leaving the activation process up to you. Call them to learn if their doing the activation process incurs an additional fee.
Scannermaster has a programming service (which may or may not include activation of your two keys, again this only sets the scanner up to be ABLE to receive ProVoice and DMR. It does not load the scanner with any ProVoice/DMR systems.) Once your scanner has been ProVoice/DMR upgraded, Scannermaster's programming service (traditionally) then deals with loading the scanner with frequencies and all other necessary parameters (settings) for the stuff you care to monitor. If you choose to ask them to do it.
I'm trying to separate the two needs you are looking for. One being how to get and install keys for the optional ProVoice and DMR, the other is the loading of the scanner with the services you want to listen to. Below, I offer some insight on the latter...
As an example I use Scanner Master. They will do all that you have asked for, for a fee. But before you have to pay others to program your scanner you should first know that Radioteference.com (RR) offers this for a subscription fee, allowing you to download the radio systems you are interested in from their website to your computer and scanner with the Sentenel software and USB cable, both provided by Uniden with the scanner, and included in the scanner purchase cost. This is the preferred programming method. It saves you the trouble of sending the scanner back to whomever you had program it and paying another programming fee when you wish to add additional stuff. (I don't know if Scannermaster offers their programming service as a lifetime one charge fee-if I had to guess I'd say no-but having to return the radio to them in order to re-program it is a hassle, being without your scanner, and incurs additional shipping & insurance costs.) RR gives you the ability to make your own changes by simply choosing what comm systems you want to listen to and downloading them into your scanner in a matter of minutes. Your scanner was deliberately designed to avail itself of this type of download. It's a foregone conclusion you will be wanting to add systems that you may have forgotten to request when others load your scanner for you.
Please forgive me if I'm preaching to the choir. I'm assuming you're new to the hobby. Downloading a copy of Uniden's owners manual will give you a better understanding of how scanner manufacturers use RR to make the chore of programming easier... Much faster and immensely easier.
Hope this helps,
Bill

Thomas,

Fine Business on all. But you are giving me the impression that you are comparing RR vs Paul's suggestion. Meaning; you have an issue with RR so instead, you are going to follow Paul's advice.

Paul is referring to HOW we make the scanner able to accept DMR and ProVoice systems. RR is all about (the database you helped build and maintain) and the added ability of allowing what I call "automatic" downloading of the frequencies.

I realize RR is not your cup of tea, but jeez, manually programming trunked systems? Seriously?

Glad to learn you are not a newbie. I remember waiting for my scanner to get "programmed" for weeks at a time. But it didn't have anything to do with computers and software programs... It had everything to do with out-of-stock crystals and back-orders! And we call that the good ol days!

Bill

And as was pointed out, RadioReference subscriptions are not required to use the Sentinel software, so any issues with RR are moot.

Joe M.

I know all this.

I kept that list up to date for many years free of charge. Being a good person.

Then years later they seen they could make a profit off of others hard work to keep it up to date they then started charging.

I asked them for an exemption from have to pay to download the files and was told in a very, very rude manor that they made no exemptions

regardless of how many year and hours I put into it giving them all the correct information even through several differ radio system swap over.

going to towers and getting the correct LCN order and such. Plus a whole lot more.

Thanks’

Thomas

Believe me - I understand.

That said, you don't have to pay RR a cent to use Sentinel.

Or are you saying that because Sentinel is based on the RR data you refuse to use it as a matter of pride? If that's the case, then I guess manual programming it is, but then you can't complain about how long that may take you since that's the choice you made for yourself.

Personally, I would use the SW. Use the RR data, then modify it to match your likes. That's what I did to start out with.

Evan,

Ok, my apologies... Then I must be missing something... Could you elaborate further? I realize my penance for miss-speaking should be to research this myself but in the interest of expediency...

...Assuming what you say is true, I spent needlessly. But throwing a couple of appreciative bucks towards RR won't break the bank. At least not in my case.

It's nice to see those that started RR with the idea of compiling a databank for all to use freely, gain some sort of appreciation for the effort.

So, what did I miss?

Bill

You are welcome Thomas. I'm sure you have your reasons. My concern was that a confusion was getting in the way of the difference between what RR does and how Paul's explanation of preparing your scanner as it related to the upgrade for DMR.

But if you care to go offline, my email is n1chu@...

Yes, that's a premium feature.

You don't need that with Uniden Sentinel.

The average user won't need that.

Getting Started

To download frequency and trunked information into your scanner, follow these three steps:

Step 1 - Become a RadioReference.com Premium Subscriber

Users who have a RadioReference.com Account with active premium subscriber status automatically have access to the Web service. To view the complete details on your premium subscription status and to upgrade your account, see the Premium Subscription Information Page. Subscribing is easy and instantaneous by credit card.

Not sure what you mean by what did you miss... To use sentinel doesn't need
a premium RR account. Anyone can update through Sentinel.

Subject: Re: [BCD536HP] Can't apply my DMR upgrade key

I am using the software. I will try the radio itself and see where that gets me. (Probably "gets" down the same road of confusion. LOL)
Sent from my Verizon Wireless 4G LTE DROID

"N1CHU n1chu@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

You can reset user settings in the main menu under settings or you can use Sentinel to to reformat your SD Card. Sentinel loads factory settings to the card after formatting so the scanner can communicate with Sentinel going forward. I'd like confirmation on this from the others in the group please...

Firmware is 1.11.09
How can you totally reset the scanner to where it is a factory reset? Will the final upgrade rectify these problems to finally get me where I belong? I am pretty tired of messing with it now.
Thanks,
Steve

! Garret,
Are you using the scanner menu or using the Sentinel software when you see the system types. You mentioned "drop down list" which is a term more associated with software.

From: Uniden UPMan
Topic: 3395 Message: 3473

This question is covered in the FAQ at:
http://info.uniden.com/twiki/bin/view/UnidenMan4/DigitalMobileRadioUpgrade

- Q:When will the update be released?
- A:We will make a clear announcement when we release it. Until then, we will answer such questions as we can (and this one we cannot).

- Q:Will I need a new version of Sentinel?
- A:Yes, a new version of Sentinel will be released along with this update.

That's because only Uniden knows, and they won't cite a date based
partially on criticism and flames for missing dates in the past.

The only answer is that it will be released when it's ready.
(same answer as when the final firmware will be released)

Uniden pays RadioReference for access to their database. Every Sunday night Uniden downloads the entire database and then massages the data to remove extraneous stuff which cannot be scanned by the HP series. On Monday sometime before Noon (usually) the update appears on Uniden's server where Sentinel can download it.

Topic: 3439 Message: 3478

There is no need for any type of RadioReference subscription to use Sentinel or EZ-Scan for ZIP Code scanners.

There is no need for a subscription of any type to view RadioReference forums and databases.

A free subscription is required to participate in RadioReference Forums.

A paid RadioReference subscription is required to use the database support feature in programming software line ARC536, FreeScan, Pro-Scan etc. that supports various radios. A paid subscription also allows you to download PDF reports of various items int he database and to post ads in the Classified section.

Bob,

That rings a bell! I vaguely remember reading about the process somewhere. So I got it wrong. Thanks for taking the time to post. It helped me remember.

Thanks Richard,

... I can put this issue to bed. believe I got the impression due to my use of Butel's ARC536 software.

Thanks for the info.

Bill

On Jun 15, 2016, at 4:00 PM, Richard Carlson n9jig@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

There is no need for any type of RadioReference subscription to use Sentinel or EZ-Scan for ZIP Code scanners.

There is no need for a subscription of any type to view RadioReference forums and databases.

A free subscription is required to participate in RadioReference Forums.

A paid RadioReference subscription is required to use the database support feature in programming software line ARC536, FreeScan, Pro-Scan etc. that supports various radios. A paid subscription also allows you to download PDF reports of various items int he database and to post ads in the Classified section.

It's the same answer I got from my Mom as a teen every time I asked when dinner would be ready... "When it's done!" I suppose I've been conditioned by her answer. But always took satisfaction in the knowledge she never missed putting dinner on the table! I also learned over the years if she heard me grumble, dinner seemed to arrive slightly later each time. I think she was teaching me one of life's lessons!

3485. BCD536HP Question

Yahoo group: BCD536HP
Date: 2016-06-15 20:00:55 UTC
From: Joe Polcari
Topic: 3485 Message: 3485

Did any of you consider the whistler scanner before buying the 536?
Or do any of you have both?
I’m in the market for a new one and not sure what would be better – I like the detachable head-end so I’m also considering the 996P2 with the RH option.

You can reply off list if you think answering is inappropriate for the list – j o e @ p olcari.com

Are you possibly listening to a trunked system? Are you listening on the repeater input instead of the output?

Is it DMR, CON+ or CAP+?
All would help to figure out the issue.

If DMR it should be programmed as such, if either of the other two then it should be as Trunked MOTOTRBO, even if it's a single channel.
Having it programmed wrong you will only get part of the talk.

The 996P2 is not compatible with the RH96 remote head. You'd want to find a 996XT for that. And good luck finding a RH96 remote head in any case. They're very hard to come by.

Speaking of which;

Short version;

I've got an RH96. Purchased new when they first came out. If the price is right I may part with it. I don't remember the cost new. I am wondering if anyone recalls what they may have seen the RH96 selling for used, now that they are so scarce?

Long version;

I've got an RH96. It's buried in storage but I'm inclined to bring it forward if it's worth selling. It was purchased new. I had it attached to my Uniden BCD996XT, a Uniden BC23A 15 watt amplified speaker and a Uniden BC-GPSK GPS receiver... All in a successful attempt to equip my motorcycle with scanning capabilities. The scanner resided in the travel pack, the RH96 and BC23A speaker were mounted to the handlebar and the BC-GPSK under the upper front fairing, magnetically attached to the AM/FM radio. It worked nicely and would have been even better with a decent antenna (I had intended on swapping out the motorcycle' stock CB antenna). But, the RH96 is rather large, blocked out my viewing some gauges. I was always disappointed in its size, thought it could have been smaller. So I replaced it and the BCD996XT with a Uniden HP1, mounted on the handlebar in instead. That left me with a remote head and a scanner. I dedicated the scanner to my man cave garage. I stored the remote head, with the knowledge it was out of production and might increase in value if I were to sell it later. Or, modify it, maybe remount the components in a smaller home-brew inclosure. Looking for original cost and today's value...

The original retail price of the RH-96 was about the same as the price of the 996XT. Almost like buying two scanners. $369 comes to mind. Scannermaster, for a while was selling them for $169 and would occasionally have them for $139, before selling out completely.

Hello John and all,the attenuater is off,and I have my services checked,actually I checked them all,and I checked the all on the customs also,and if they are on,I will just shut them off.I am going to use the ARC536PRO and set the Lake County Public Service System Types to P25 Standard,then reload it again and set it to P25 one Freq,then load it again and set it to P25 TDMA,going to try all 3 of the P25 Service Type settings and see if there is any difference on the 3 settings for any receive. I would think and hope something would come over the scanner,with the settings left alone.I will update you with the results to see if any of these settings will work.I am at my breaking point with the scanner,I am trying everything I can and with your suggestions. If nothing works,I will be calling Uniden tech service and hope they can help or figure the scanner out,I am as lost as all of you are.Thank you all,Mark KB9GTB,,,

I have a remote head I may want to sell also,I used it with my BCD996XT. I purchased a wall wart for it and put the scanner behind my recliner,and would use the remote head sitting in my lap and control the scanner while watching the news and drinking my coffee,worked awesome. I remember Paying like $350.00 on eBay,had a price battle,paid a bit more than what I wanted to,but what a great accessory to the scanner sitting on my recliner.If anyone is interested,I may be willing to part with it,including the wall wart,or plug in jobber for the wall,original box,directions,car wiring,everything is in the box that came with it.If I am aloud to post this,contact me a whyme505898comcast.net,and I may consider a best offer.Thanks you,,Mark,KB9GTB
If not able to post or sell like this,you can remove this and I will post on something,not sure where to sell things,but I will hunt around,,Thank you,,,,

Ahh - Ok I see that now, so that's a start - what if I want to add this department to another department - and again sorry if I'm not using the right terminology.... I have a system that has our county on it - police, fire, ems, etc.
I know I could use quick keys for this, but instead what I'm doing is breaking it into systems - so for my county, I may have one system "County Law Enforcement" with all the PD channels for the county. Then "County Fire" with all the county fire channels. Then "County EMS" which has EMS. Then say Tri City Police - which has law enforcement for just 3 of the X cities in the county.

What I want to do is add those channels to say Tri City Police? Does that make sense?

Thanks :)

Create a whole new favorites list? That sounds like a backwards way to do it, no?

Not really. It actually works well.
Another way I have done it is one FL for PD and one for Fire/EMS.
Both work, although I do like the latter better.

3504. BCDx36HP Preview 4 Available

Yahoo group: BCD536HP
Date: 2016-06-17 13:14:38 UTC
From: Uniden UPMan
Topic: 3504 Message: 3504

Download (and yes, there is a new password to get to the new stuff) is at this link right here.

-- New Supported and Modified Items --
1. Modified LCN Finder
2. Improved tracking in CAP Plus
3. Supported RAS in CAP Plus
4. Improved connection to the control channel in CON Plus
5. Modified display order for source ce ID and destination ID of DMR Private Call
6. Modified display switching of color code
7. Modified swapping to Quick Search on searching in Conventional Discovery
8. Supported recording Network ID, Site ID and TGID in Conventional mode
9. Changed format of DMR Activity Log UpManUpMan FAQ:
http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

I don't know. Something looks really weird or wrong after updating to this Preview 4. It seems that even with a full signal, I can't get any info on a DMR CON+ control channel using the System Status mode. On conventional, only get the Slot number but no Color Code anymore and it doesn't seem to be tracking the system anymore in Trunked mode. I'll keep testing...

3507. BCD536HP Sietinel Software Question About My Location

Yahoo group: BCD536HP
Date: 2016-06-19 04:23:58 UTC
From: Kajj 1
Topic: 3507 Message: 3507

I do not know if there is a separate group for the BCD536HP Sentinel Software or NOT?

I have a few questions and if I am posting on the wrong site, would you please give me a link to wherever I need to go?

In the Data Base under the state of Alabama, County of Mobile,

why isn't the 700MHz system for The City of Mobile listed? It is a Harris Digital ProVoice System Unencrypted.

I have had 2 people in another group that is close to me in Mobile tell me that they have the Hand-Held version of this radio and it works great! (436)

I would think that if that is the case and is true (which I have no reason not to believe them) that the Frequencies and Info would be in said Data Base.

I have asked for them if they would to provide me those Frequencies but no one will answer.

I have spent a lot of money over my lifetime on scanners and before I purchase the 536 I would like to see where the towers are located and get the Frequencies.

If I sound as if I am talking out of my head, I am. I have never seen one of these 536 scanners.

Thanks for any and all help..

Thomas

From: bob.peloquin@...
Topic: 3507 Message: 3510

As has been said by others, the database at RadioReference.com does not contain any 700 MHz Harris EDACS system, Provoice or otherwise, for the City of Mobile, Alabama in Mobile County. The Uniden download for the HomePatrol series of scanners is derived from the RadioReference database. That database is 100% user-contributed and if it doesn't contain the frequencies and correct LCN order for the EDACS system and its talkgroups then some user (hint-hint) needs to contribute that data in order for the HomePatrol scanners (including the BCD436HP/BCD536HP) to begin picking the system up.

If you know the frequencies and talkgroups, please spend the time to SUBMIT the information to RadioReference. Otherwise - you'll just have to be happy in the same boat as everyone else. We don't want unhappy people so I hope an explanation of how systems are added to the Uniden database is sufficient... If not, it's certainly your right to be unhappy - just don't make us all unhappy, OK.

If it's not in the scanner DB there are no known TGID's. Those without TGID's are not downloaded by default when Uniden imports the data.

3512. Using the GPS/Location feature while traveling

Yahoo group: BCD536HP
Date: 2016-06-19 09:05:13 UTC
From: AJB5540@...
Topic: 3512 Message: 3512

I will be traveling from Maine to Florida. I have the 536 and I have the GPS unit installed. I would like to set the scanner up so that as I travel down I-95, I can hear everything in the areas that I am traveling through, without my having to do or manually update anything once its turned on (I want to be able to keep my eyes on the road). Is this possible and if so, how would I go about setting it up?

Thanks in advance, regards and Happy Fathers Day.
AJ

3513. [BCD536HP] BCD536HP Sietinel Software Question About My Location

Yahoo group: BCD536HP
Date: 2016-06-19 11:37:00 UTC
From: Kajj 1

Joe M.,
Thanks for replying.
Yes there is a ProVoice System. The City paid Harris Radio over $30 million for it and was supposed to have been County Wide 6 years ago.
The City was changed over about 2 years ago and the other Municipalities within the City are just now changing over to it, and the system is already out of warranty.

I have never programmed anything other in my life but Convectional Systems and The OLD Trunked EDACS system.

I would love to be able to program the Burns Site into myBCD996P2 scanner bought I honestly don't know how.

I am using Butel Pro Software and I know how to copy and paste from RadioReference.
I just don't know how to set it up. You know, where to place what and what to tick, turn on or off, etc.

Any help would be appreciated very much. Maybe someone who has the Butel with a P25 system could send me one of their files so I could import it into my scanner to see how one is set up.

Thanks again Joe & Group.

Thomas

From: Kajj 1
Topic: 3507 Message: 3514

Here is the link to the OLD City of Mobile

http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=2923818

Location Tower No. 1

Old Call Sign: WQHC621

Type of Radio Service: YE – PUBSAFTY/SPECEMER/PUBSAFTYNTLPLAN.806-817/851-862MHz, TRUNKED

WAS a Motorola System.

Now A Harris Digital System (ProVoice Unencrypted Supposedly)

New Call Signs: WQWK941 , expires 9/24/2025

Type of Radio Service: SY - Trunked Public Safety 700 MHz

Here is the link to the new System:

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3737378

Now I am lost more than I was before. And believe me, I WAS LOST!!!!

Thank You,

Thomas

With the Uniden (or other serial NMEA 0183 compliant GPS) connected to the rear GPS/remote 9-pin port, go to Menu, Set Your Location, Set Up GPS, Set Serial Port and select the correct baud rate to match your GPS (usually 4800 BPS).

When the scanner detects GPS data coming in from the serial port, I believe it will prompt you to use GPS data. Select the E (yes) button and enjoy. Range will automatically be set to 0 miles meaning you will begin picking up each system as you come into its predefined service area stored in the database and they will be deselected as you leave that system's service area. You can increase the range if you desire.

Also, be aware that scanner use in some states (including Florida and New York) is prohibited without an amateur radio license. So don't get caught...

Set the scanner to e main database. Set the services to the types of things you want to hear. Make sure the GPS has a clear view of the sky and that the rear port is set to 4800 bps (the default).

Subject: [BCD536HP] Using the GPS/Location feature while traveling

  I will be traveling from Maine to Florida. I have the 536 and I have the GPS unit installed. I would like to set the scanner up so that as I travel down I-95, I can hear everything in the areas that I am traveling through, without my having to do or manually update anything once its turned on (I want to be able to keep my eyes on the road). Is this possible and if so, how would I go about setting it up?
Thanks in advance, regards and Happy Fathers Day.AJ

According to a post a few days ago on RadioReference:

The City and County are also in the process of building a Harris P25 system that will reportedly be encrypted. When that change will happen is unknown, so how long you'll be able to hear them is also unknown.
(followup says not everything will be encrypted)
Another post from last month says that they were able to monitor it flawlessly using a BCDx36HP with the ProVoice upgrade installed.
So: A) The Harris system will be APCO Project 25, not EDACS ProVoice; b) The Harris system is not yet in operation; and C) The current system, which is an EDACS Provoice system can be monitored just fine (as long as you have the ProVoice upgrade). 3522. Display GPS info

Yahoo group: BCD536HP
Date: 2016-06-19 22:48:42 UTC
From: Richard Carlson
Topic: 3522 Message: 3522

On my 996's and 15's one just presses the GPS button to see GPS info such as elevation and speed. I cannot seem to find out how to do that on a GPS connected BCD536HP. I seem to recall reading how some time ago but an hour of searching has come up empty...

Does someone know?

From: JETorres
Topic: 3524 Message: 3524

Do Connect Plus systems have that feature just like most other system types? And how does the scanner handle it? Recently one of our local systems must've gone into that mode for a couple of days and even conventionally is hard to track with all the frequencies in use transmitting data constantly.

Watch out when you go through Brevard county – I heard for the first time – FHP and BCSO working together with a fixed radar site somewhere north of Melbourne, south of beeline - they'll call to any available HP, sherrrif, or local city with tag, car id, and speed – and which exit they are passing – some they go for some not.

Keep it under 80

R

Subject: [BCD536HP] Using the GPS/Location feature while traveling

I will be traveling from Maine to Florida. I have the 536 and I have the GPS unit installed. I would like to set the scanner up so that as I travel down I-95, I can hear everything in the areas that I am traveling through, without my having to do or manually update anything once its turned on (I want to be able to keep my eyes on the road). Is this possible and if so, how would I go about setting it up?

Thanks in advance, regards and Happy Fathers Day.

AJ

Restricted to amateur radio license holders, members of the press, and aux police -- but mostly don’t care. Haven’t heard of anyone being popped for it.

Subject: [BCD536HP] BCD536HP Sietinel Software Question About My Location

I do not know if there is a separate group for the BCD536HP Sentinel Software or NOT? I have a few questions and if I am posting on the wrong site, would you please give me a link to wherever I need to go? In the Data Base under the state of Alabama, County of Mobile,why isn’t the 700MHz system for The City of Mobile listed? It is a Harris Digital ProVoice System Unencrypted.I have had 2 people in another group that is close to me in Mobile tell me that they have the Hand-Held version of this radio and it works great! (436)I would think that if that is the case and is true (which I have no reason not to believe them) that the Frequencies and Info would be in said Data Base.I have asked for them if they would to provide me those Frequencies but no one will answer.I have spent a lot of

money over my lifetime on scanners and before I purchase the 536 I would like to see where the towers are located and get the Frequencies.If I sound as if I am talking out of my head, I am. I have never seen one of these 536 scanners. Thanks for any and all help….
 Thomas

People will pass you – I usually go 85-95 on I 95 when making a run - but this weekend, I uncovered this before unknown to me , coordinated speed ‘traps’ must be distributed remote radars linked by a network – dispatchers calls out car, tag, speed and direction (north or south) and opens it to any HP, Sherris, or city to pursue and what exit they are at – haven’t heard anyone take them up on it yet – maybe they are still debugging it.

You can monitor most. CID, etc are encrypted. Of all of Brevard country, they are now on two simulcast systems, north and south, only palm bay uses encrypted channels on their sensitive talk groups. Palm Bay dispatch 1 & 2 are in the clear.

All the other cities are in the clear -- florida highway patrol has always been encrypted and never (in the last 16 or so years) been able to be monitored.

You should note, that the home of Harris IS in southern Brevard county – and most of us engineers (around 6,000) are employed therein. But that helps out with nothing as far as scanners, and radios, etc etc. just the name on the paycheck. The public safety stuff was acquired and is done out of state. I really hate EDACS being called HARRIS radios, we make fantastic military and broadcast radios, the public service line was an acquisition of a conglomeration of MaCom, and others. Not a big money maker – not our design.

Richard,

At the risk of beating a dead horse, bear with me for raising this concern once again...

I came across what I have copied below while looking at the Town of WINDSOR, Ct., Hartford County, under the download reports tab, in the RR Database...

It refers to "Programming Your Scanner with the RadioReference Web Service".

It appears to contradict your understanding of NOT needing a premium subscription to RR in order to freely program using the Sentinel software. While I do not doubt what you understand to be true, I question my understanding of what you write... So, I ask for your help in understanding your take on the subject. I've read and re-read your post but can not grasp how your post can agree with what I've copied and posted below. Am I misreading and missing your meaning?

Note the "Last updated 2009-03-05" date at the end of what I have copied here. Old material? Needs an update?

Here is what I have copied;

You can download information directly into your radio by using a scanner programming software application that supports the RadioReference.com Web Service Direct Download feature. Please see the following page for information on how to get started using this feature:

(A hyperlink brings us to the following page...)

Programming Your Scanner with the RadioReference Web Service.

Overview

The RadioReference.com Web service provides users the ability to download scanner frequency and trunked radio system information directly from the database to their scanners. The Web service works by providing scanner programming software applications direct access to the database through a set of common, documented communications standards. The graphic below shows the information flow between different components.

(A graphic depiction of the RR data server to your computer running Sentenel Software and finally, to your scanner)

Getting Started

To download frequency and trunked information into your scanner, follow these three steps:

Step 1 - Become a RadioReference.com Premium Subscriber

Users who have a RadioReference.com Account with active premium subscriber status automatically have access to the Web service. To view the complete details on your premium

subscription status and to upgrade your account, see the Premium Subscription Information Page. Subscribing is easy and instantaneous by credit card.

Step 2 - Download and Install a Supported Scanner Programming Software Application

A scanner programming software application is required to access the Web service and download information directly to your scanner. These applications function as the bridge between the RadioReference Database and your individual scanner or radio.

Scanner programming software applications are written by numerous third-party organizations and individuals and many of them directly support the RadioReference.com Web service download feature.

To see the complete list of scanner programming software applications that support the Web service please see this reference page:
* Supported Scanner Software Applications
NOTE: it is important that you determine whether or not your individual scanner or radio is supported by a Web service capable programming application. Not all scanners are supported by application developers. See the above supported programs link for details.

Step 3 - Follow the individual software application instructions

Each individual software application will prompt you to enter your RadioReference.com Premium Account Username and Password before being able to access the Web service directly and program your scanner. Please reference the instructions for each application on how to access the Web service.

Last Updated: 2009-03-05 14:30:00

Step one of this process is obviously in question... If it was accurate back in 2009, but has been changed since then to NOT requiring a premium subscription, (or was an incorrect statement from the get go) it should have been updated to reflect the change. If it IS an incorrect statement, a guess on my part why it's still there is... Since WHERE I read it is probably a part of the database accessed by the regional administrators (those responsible for the review of and inclusion into the database for all user submissions), and the overall functions of the site, relating to the policy editing needs, it did not get referenced at the submission level. And was missed?

I bring this up to gain insight to what I may have misunderstood, or, if I AM reading it correctly, in an effort to gain an "Attaboy"! I may have stumbled upon a needed update for a minor oversight by the regional level of submission administrators. But I'm not holding my breath for an attaboy. If I had to guess, I'd bet it is me that is missing the point!

Your (and anyone else's) patience with me will be greatly appreciated...

Bill

That's for OTHER radios, not those like the x36, HP and so on that have their own DB. So NO, you do NOT need a subscription for the 536. A 996 etc you can have a subscription for.

Uniden does the "pull" from RR for you with the x36's and HP's that have built in databases si you don't need a subscription.

Get it now?

John

From: bob.peloquin@...
Topic: 3439 Message: 3541

The instructions on RadioReference.com are for programs which use the radioreference.com database (directly) to program your scanner. Sentinel DOES NOT use the RadioReference.com database directly - it uses a copy of the database which has been massaged by Uniden and is stored on Uniden's servers. It is FREE and requires no subscription (by you) to RadioReference.com.

The horse is now VERY dead. I cannot understand why you seem to be having so much trouble understanding the process and the flow of database info from RadioReference.com --> to Uniden --> to your Sentinel program --> to your HP-series scanner. It's not going from RadioReference.com to your scanner... It goes from RR to Uniden and then to your scanner. RR has the subscription to the data and distributes it to you for free. RR pays a lot of money to have this ability (as does Whistler).

Bob - KB1VUA
RR db admin (Massachusetts)

You do not have to guess or wonder. Just download Sentinel (it is free and you can download/run it even if you have not bought the scanner). Update the main database. You are not prompted for your own login (or any other).Under our license with RadioReference we are allowed to download the entire database for use in our licensed scanners. This license is free to the end user (we do pay something for this license). UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Yep, exactly what I've suggested a few times over :) I pay for a premium RR account, but have used Sentinel and updated the DB many times before I paid for the RR account and never had to enter my info.

The proof is in the pudding :)

You really should take this "beef" up with Radio Reference. Uniden has said you don't need a premium account and Uniden has proven you don't need a premium account. Name one thing Sentinel will not do without a premium account???? Sounds like the problem is with RR, so there's not even a horse to beat here.

Evan, Paul, Bob and John,

I get it! Finally!

I have to preface this reply with a statement "I wouldn't dare ask another question on this topic, never mind how dead the horse is or will be!" I'm sure there are a few of you out there muttering under your collective breaths "Dumb Ass"!

I finally have an understanding of the WHY behind my not getting it. I continued to get hung up on WHERE the updates were coming from. I use ARC programming for as much as possible. I find myself using Sentenel for what I can't get from ARC, such as the firmware updates. I had become so used to the ARC programming (their tab reads "Internet" and when opened, reads "Radioreference") that I was thinking it was the ONLY way to get the data... DIRECTLY from RR... Which requires a subscription. I had ignored the fact that Sentinel allowed for the downloading from Uniden's server, not RR's server. And I ignored the numerous repeated attempts by you all to explain that to me due to this roadblock I had constructed in my thought process. But to my credit, I knew you guys were trying to get through to me, all with the same story... I felt your frustration... "What the hell is this guy's problem?" I also, was frustrated.

But;

When you have four guys telling you "You are dead", you lie down and die! It's that simple. I may not have gotten your meaning up until now, but I was smart enough to know I better get to the root cause of my error in thinking. I knew deep down you all were right. So that made me wro... wro... (It's tough to admit and say)... Wrong. There, I said it. I was wrong and you were right. Happy? I know I am. lol.

Seriously, thank you all again, both those I mention by name and the others (who probably gave up on mealong the way).

This question is finally put to bed. It did however get me thinking about the ARC software as it relates when used in conjunction with Sentinal for the loading of data. Editing my FL's using either or both might cause problems? I'm thinking I should be using Sentinel for all it provides and the ARC only for what Sentinel does not provide. Up until now it's been mixing and matching but mostly the opposite.

Bill

Richard,

At the risk of beating a dead horse, bear with me for raising this concern once again...

I came across what I have copied below while looking at the Town of WINDSOR, Ct., Hartford County, under the download reports tab, in the RR Database...

It refers to "Programming Your Scanner with the RadioReference Web Service".

It appears to contradict your understanding of NOT needing a premium subscription to RR in order to freely program using the Sentinel software. While I do not doubt what you understand to be true, I question my understanding of what you write... So, I ask for your help in understanding your take on the subject. I've read and re-read your post but can not grasp how your post can agree with what I've copied and posted below. Am I misreading and missing your meaning?

Note the "Last updated 2009-03-05" date at the end of what I have copied here. Old material? Needs an update?

Here is what I have copied;

You can download information directly into your radio by using a scanner programming software application that supports the RadioReference.com Web Service Direct Download feature. Please see the following page for information on how to get started using this feature:

(A hyperlink brings us to the following page...)

Programming Your Scanner with the RadioReference Web Service.

Overview

The RadioReference.com Web service provides users the ability to download scanner frequency and trunked radio system information directly from the database to their scanners. The Web service works by providing scanner programming software applications direct access to the database through a set of common, documented communications standards. The graphic below shows the information flow between different components.

(A graphic depiction of the RR data server to your computer running Sentenel Software and finally, to your scanner)

Getting Started

To download frequency and trunked information into your scanner, follow these three steps:

Step 1 - Become a RadioReference.com Premium Subscriber

Users who have a RadioReference.com Account with active premium subscriber status automatically have access to the Web service. To view the complete details on your premium subscription status and to upgrade your account, see the Premium Subscription Information Page. Subscribing is easy and instantaneous by credit card.

Step 2 - Download and Install a Supported Scanner Programming Software Application

A scanner programming software application is required to access the Web service and download information directly to your scanner. These applications function as the bridge between the RadioReference Database and your individual scanner or radio.

Scanner programming software applications are written by numerous third-party organizations and individuals and many of them directly support the RadioReference.com Web service download feature.

To see the complete list of scanner programming software applications that support the Web service please see this reference page:
* Supported Scanner Software Applications
NOTE: it is important that you determine whether or not your individual scanner or radio is supported by a Web service capable programming application. Not all scanners are supported by application developers. See the above supported programs link for details.

Step 3 - Follow the individual software application instructions

Each individual software application will prompt you to enter your RadioReference.com Premium Account Username and Password before being able to access the Web service directly and program your scanner. Please reference the instructions for each application on how to access the Web service.

Last Updated: 2009-03-05 14:30:00

Step one of this process is obviously in question... If it was accurate back in 2009, but has been changed since then to NOT requiring a premium subscription, (or was an incorrect statement from the get go) it should have been updated to reflect the change. If it IS an incorrect statement, a guess on my part why it's still there is... Since WHERE I read it is probably a part of the database accessed by the regional administrators (those responsible for the review of and inclusion into the database for all user submissions), and the overall functions of the site, relating to the policy editing needs, it did not get referenced at the submission level. And was missed?

I bring this up to gain insight to what I may have misunderstood, or, if I AM reading it correctly, in an effort to gain an "Attaboy"! I may have stumbled upon a needed update for a minor oversight by the regional level of submission administrators. But I'm not holding my breath for an attaboy. If I had to guess, I'd bet it is me that is missing the point!

Your (and anyone else's) patience with me will be greatly appreciated...

Bill

Bill;

Sometimes it takes a while for the epiphany to hit and to grasp a concept. I had the same issue years ago with trunking systems. For several years I just couldn't wrap my brain around the concept until a friend explained it in a way that I understood it. It appears that you now "get it"!

As for your other questions: Sentinel is fine for most HomePatrol and x36 owners. It is free and allows one to create and edit Favorites Lists, which accounts for what most people need.

ARC-536 allows more detailed programming of the Favorites Lists as well as virtual control and recording directly to the computer (vs. recording to the SD Card). It still requires Sentinel for database updates to the radio as well as normal firmware updates.

I usually talk more people out of ARC-536 than copies I sell since it really is intended more for radio geeks and gods (like myself). "Normal" scanner users can get by fine with Sentinel.

If you edit or create a Favorites List on the radio, within Sentinel or in ARC-536 any of the other methods will recognize it and edit it without issue. The biggest problem you might have is version control. (What version of the Favorites list do you have at the radio, on the computer etc.)

A lot of people who pay us (ScannerMaster) to perform the initial updates later edit the Favorites Lists we create for them to make them more precise to their needs. I have coached many of our customers (and several customers of competing sellers) how to do that.

Richard,

Thank you for the kind words. The observations from one who knows... concerning using two different but compatible programmers is appreciative. Actually, I could end up with three different files, all with the same FL name! That possibility was apparent to me, always backing up the edited files to both the radio and computer using Setinel and then ARC. Talk about overkill.

Thanks again,

Bill

As for your other questions: Sentinel is fine for most HomePatrol and x36 owners. It is free and allows one to create and edit Favorites Lists, which accounts for what most people need.

ARC-536 allows more detailed programming of the Favorites Lists as well as virtual control and recording directly to the computer (vs. recording to the SD Card). It still requires Sentinel for database updates to the radio as well as normal firmware updates.

I usually talk more people out of ARC-536 than copies I sell since it really is intended more for radio geeks and gods (like myself). "Normal" scanner users can get by fine with Sentinel.

If you edit or create a Favorites List on the radio, within Sentinel or in ARC-536 any of the other methods will recognize it and edit it without issue. The biggest problem you might have is version control. (What version of the Favorites list do you have at the radio, on the computer etc.)

A lot of people who pay us (ScannerMaster) to perform the initial updates later edit the Favorites Lists we create for them to make them more precise to their needs. I have coached many of our customers (and several customers of competing sellers) how to do that.

>
> I finally have an understanding of the WHY behind my not getting it. I continued to get hung up on WHERE the updates were coming from. I use ARC programming for as much as possible. I find myself using Sentenel for what I can't get from ARC, such as the firmware updates. I had become so used to the ARC programming (their tab reads "Internet" and when opened, reads "Radioreference") that I was thinking it was the ONLY way to get the data... DIRECTLY from RR... Which requires a subscription. I had ignored the fact that Sentinel allowed for the downloading from Uniden's server, not RR's server. And I ignored the numerous repeated attempts by you all to explain that to me due to this roadblock I had constructed in my thought process. But to my credit, I knew you guys were trying to get through to me, all with the same story... I felt your frustration... "What the hell is this guy's problem?" I also, was frustrated.
>
> But;
>
> When you have four guys telling you "You are dead", you lie down and die! It's that simple. I may not have gotten your meaning up until now, but I was smart enough to know I better get to the root cause of my error in thinking. I knew deep down you all were right. So that made me wro... wro... (It's tough to admit and say)... Wrong. There, I said it. I was wrong and you were right. Happy? I know I am. lol.
>
> Seriously, thank you all again, both those I mention by name and the others (who probably gave up on mealong the way).
>
> This question is finally put to bed. It did however get me thinking about the ARC software as it relates when used in conjunction with Sentinal for the loading of data. Editing my FL's using either or both might cause problems? I'm thinking I should be using Sentinel for all it provides and the ARC only for what Sentinel does not provide. Up until now it's been mixing and matching but mostly the opposite.

The FHP does not use the OpenSky format, they use ProVoice. ProVoice can be heard on a BCD436 or BCD536 scanner with the ProVoice update.

AFAIK the only OpenSky in Florida is a local system in the Palm Beach area.

If you look at RR it shows all talk groups for FHP encrypted. They also encrypt the control channels in most cases. As another person already stated they have been 100% encrypted for about 15 years now. There are other users on the system but most police are encrypted. You can view the system here. http://www.radioreference.com/apps/db/?sid=1678

3562. Re: [BCD536HP] ATTN: Paul Opitz BCD536HP According to a post a few days ago on RadioReference: City of Mobile & Mobile County BCD536HP

Yahoo group: BCD536HP
Date: 2016-06-22 02:26:19 UTC
From: Gary Saffer
Topic: 3545 Message: 3562

There seems to be a lot of bad or confused information here.

Mobile City used to be on their own EDACS system. About 3 years ago, they moved to the Mobile County system and started using Pro Voice. For a while Mobile City was still on the city system, but apparently now all city agencies are on the County system.

Mobile County and all of the municipalities outside of the city are on the County system, using analog voice. That includes the various fire departments and Mobile County EMS.

There is a combined City/County P25 system being built or has been mostly built. It's by Harris and the story about possible bid rigging/corruption has been going on for a while. Apparently this has been part of the delay in activating the new system.

I have been told, but can't confirm, that new Harris radios have been installed, but are still configured to work on the existing EDACS system. Since Harris owns the EDACS system and the radios are software controlled, this is possible.

To the best of my knowledge, Motorola is not involved in any of this. They don't have licenses to use EDACS software.

There is a 700 Mhz system in Baldwin County that includes most of the public safety systems. The Baldwin County Sheriff and a number of the city PDs are encrypted. None of the FDs seem to be encrypted. With a few exceptions everyone over there is using Phase II.

That system has three towers in Mobile County, including one in Mobile itself. I don't know if those are for the Mobile City/County system or just for coverage in parts of Baldwin County. If I were down there more often than I am, I would put those three sits into my scanner and listen.

Personally, I hope Mobile stays on EDACS for a couple more years since I put the Pro Voice upgrade so I can listen when I'm down there.

I hope that clears up some of the confusion.

3566. Re: [BCD536HP] BCD536HP General Question

Yahoo group: BCD536HP
Date: 2016-06-22 14:45:39 UTC
From: Jim Stein
Topic: 3439 Message: 3566

Great explanation and I think I get it now as well. I have ARC software for a couple of my older scanners but have stayed away from it on my 536 as I didn't want to buy ARC-536 and then have subscribe to RR also. Now it looks like that is not necessary. But to clarify (and get it into my ancient brain) just a couple of questions:
Using only the RR database downloaded via Sentinel and no RR subscription could I: - create a FL in Sentinel and then open and edit it in ARC-536, upload it to the 536 and use ARC's additional functions (virtual control etc)?- will ARC-536 see the Sentinel installed database and allow me to create a new FL from using that data and upload and run it on the 536?
I had the impression that I could buy and run ARC-536 on the scanner OK but that I would have to manually type in all data as opposed to pulling it from the RR database - highly impractical. Evidently I was wrong???
Thanks for the help - and for the patience!
Jim

Bill;

Sometimes it takes a while for the epiphany to hit and to grasp a concept. I had the same issue years ago with trunking systems. For several years I just couldn't wrap my brain around the concept until a friend explained it in a way that I understood it. It appears that you now "get it"!

As for your other questions: Sentinel is fine for most HomePatrol and x36 owners. It is free and allows one to create and edit Favorites Lists, which accounts for what most people need.

ARC-536 allows more detailed programming of the Favorites Lists as well as virtual control and recording directly to the computer (vs. recording to the SD Card). It still requires Sentinel for database updates to the radio as well as normal firmware updates.

I usually talk more people out of ARC-536 than copies I sell since it really is intended more for radio geeks and gods (like myself). "Normal" scanner users can get by fine with Sentinel.

If you edit or create a Favorites List on the radio, within Sentinel or in ARC-536 any of the other methods will recognize it and edit it without issue. The biggest problem you might have is version control. (What version of the Favorites list do you have at the radio, on the computer etc.)

A lot of people who pay us (ScannerMaster) to perform the initial updates later edit the Favorites Lists we create for them to make them more precise to their needs. I have coached many of our customers (and several customers of competing sellers) how to do that.

Evan, Paul, Bob and John,
I get it! Finally!
I have to preface this reply with a statement "I wouldn't dare ask another question on this topic, never mind how dead the horse is or will be!" I'm sure there are a few of you out there muttering under your collective breaths "Dumb Ass"!
I finally have an understanding of the WHY behind my not getting it. I continued to get hung up on WHERE the updates were coming from. I use ARC programming for as much as possible. I find myself using Sentenel for what I can't get from ARC, such as the firmware updates. I had become so used to the ARC programming (their tab reads "Internet" and when opened, reads "Radioreference") that I was thinking it was the ONLY way to get the data... DIRECTLY from RR... Which requires a subscription. I had ignored the fact that Sentinel allowed for the downloading from Uniden's server, not RR's server. And I ignored the numerous repeated attempts by you all to explain that to me due to this roadblock I had constructed in my thought process. But to my credit, I knew you guys were trying to get through to me, all with the same story... I felt your frustration... "What the hell is this guy's problem?" I also, was frustrated.
But;
When you have four guys telling you "You are dead", you lie down and die! It's that simple. I may not have gotten your meaning up until now, but I was smart enough to know I better get to the root cause of my error in thinking. I knew deep down you all were right. So that made me wro... wro... (It's tough to admit and say)... Wrong. There, I said it. I was wrong and you were right. Happy? I know I am. lol.
Seriously, thank you all again, both those I mention by name and the others (who probably gave up on mealong the way).
This question is finally put to bed. It did however get me thinking about the ARC software as it relates when used in conjunction with Sentinal for the loading of data. Editing my FL's using either or both might cause problems? I'm thinking I should be using Sentinel for all it provides and the ARC only for what Sentinel does not provide. Up until now it's been mixing and matching but mostly the opposite.
Bill

  Richard,

At the risk of beating a dead horse, bear with me for raising this concern once again...

I came across what I have copied below while looking at the Town of WINDSOR, Ct., Hartford County, under the download reports tab, in the RR Database...

It refers to "Programming Your Scanner with the RadioReference Web Service".

It appears to contradict your understanding of NOT needing a premium subscription to RR in order to freely program using the Sentinel software. While I do not doubt what you understand to be true, I question my understanding of what you write... So, I ask for your help in understanding your take on the subject. I've read and re-read your post but can not grasp how your post can agree with what I've copied and posted below. Am I misreading and missing your meaning?

Note the "Last updated 2009-03-05" date at the end of what I have copied here. Old material? Needs an update?

Here is what I have copied;

You can download information directly into your radio by using a scanner programming software application that supports the RadioReference.com Web Service Direct Download feature. Please see the following page for information on how to get started using this feature:

(A hyperlink brings us to the following page...)

Programming Your Scanner with the RadioReference Web Service.

Overview

The RadioReference.com Web service provides users the ability to download scanner frequency and trunked radio system information directly from the database to their scanners. The Web service works by providing scanner programming software applications direct access to the database through a set of common, documented communications standards. The graphic below shows the information flow between different components.

(A graphic depiction of the RR data server to your computer running Sentenel Software and finally, to your scanner)

Getting Started

To download frequency and trunked information into your scanner, follow these three steps:

Step 1 - Become a RadioReference.com Premium Subscriber

Users who have a RadioReference.com Account with active premium subscriber status automatically have access to the Web service. To view the complete details on your premium subscription status and to upgrade your account, see the Premium Subscription Information Page. Subscribing is easy and instantaneous by credit card.

Step 2 - Download and Install a Supported Scanner Programming Software Application

A scanner programming software application is required to access the Web service and download information directly to your scanner. These applications function as the bridge between the RadioReference Database and your individual scanner or radio.

Scanner programming software applications are written by numerous third-party organizations and individuals and many of them directly support the RadioReference.com Web service download feature.

To see the complete list of scanner programming software applications that support the Web service please see this reference page:
* Supported Scanner Software Applications
NOTE: it is important that you determine whether or not your individual scanner or radio is supported by a Web service capable programming application. Not all scanners are supported by application developers. See the above supported programs link for details.

Step 3 - Follow the individual software application instructions

Each individual software application will prompt you to enter your RadioReference.com Premium Account Username and Password before being able to access the Web service directly and program your scanner. Please reference the instructions for each application on how to access the Web service.

Last Updated: 2009-03-05 14:30:00

Step one of this process is obviously in question... If it was accurate back in 2009, but has been changed since then to NOT requiring a premium subscription, (or was an incorrect statement from the get go) it should have been updated to reflect the change. If it IS an incorrect statement, a guess on my part why it's still there is... Since WHERE I read it is probably a part of the database accessed by the regional administrators (those responsible for the review of and inclusion into the database for all user submissions), and the overall functions of the site, relating to the policy editing needs, it did not get referenced at the submission level. And was missed?

I bring this up to gain insight to what I may have misunderstood, or, if I AM reading it correctly, in an effort to gain an "Attaboy"! I may have stumbled upon a needed update for a minor oversight by the regional level of submission administrators. But I'm not holding my breath for an attaboy. If I had to guess, I'd bet it is me that is missing the point!

Your (and anyone else's) patience with me will be greatly appreciated...

Bill

3568. Re: [BCD536HP] BCD536HP General Question

Yes, you can create a Favorites List in Sentinel and open/edit it in ARC536. ARC536 will see the Full Database in the radio or in your Sentinel installation to draw upon to import to a new or edited Favorite List so no RR Subscription is required.

If you do have a RR Premier Membership (subscription) then you can import from the RRDB just like you would in other programs.

So the upshot is that you can pretty much do anything you want with the 435/536 radios and not need a RadioReference subscription, using either Sentinel or ARC536.

Jim,

Richard "pretty much" says it all;

"So the upshot is that you can pretty much do anything you want with the 435/536 radios and not need a RadioReference subscription, using either Sentinel or ARC536."

The thing that I stumbled over was a confusion between the two programming softwares I am using, namely Sentinel and ARC. When you get the 536 or 436 you also get Sentinel, it's a Uniden product which INCLUDES a database from which we can create our Favorites Lists (FL) from. When we use Sentinel to create our FL's, we do it WITHOUT an additional charge to ourselves. Uniden includes it in the price of the scanner. But it just so happens Uniden acquires the information used in the Sentinel database from RR! I have now learned to put that piece of info out of my mind. It's really none of my business where Uniden (Sentinel) gets their information from and the fact that I knew just screwed me up more. I now refer to the database that Sentinel uses as simply "The Sentinel database" and I did NOT require a subscription to RR.

The ARC software is different... It uses the RR data. It's software will attach us directly to RR. And that's where the difference is... In order to program our scanners with FL's created by the data we download from RR, we need to buy a subscription to RR.

So, Uniden's Sentinel costs nothing to use when we create our FL's, we are in fact using a Uniden database which I now call the "Sentinel Database". Butel software provides for a link to RR and does use the RR database for a fee, which is paid to RR.

Richard says "pretty much anything" when comparing the two pieces of software and given the context from where it is coming from, it's a correct statement. I think Richard did not include "Using ARC to access the RR database requires a subscription" goes without saying. However, I think it wouldn't hurt to again note it...

Sentinel allows for the ability to update the "Sentinel Database" and the scanner's firmware. ARC can not update the firmware. Although the ARC software has many worthwhile features, it won't do the Uniden firmware updates/upgrades. I like to think of the ARC programmers for the x36 radios as an "add-on", optional extras that are fully compatible with the Sentinel software, both chugging right along side by each... But not as a necessary integral piece. And the subscription required with one but not the other.

I doubt Uniden has an interest in identifying the frequency database service they provide to us but purchased from RR as a Uniden feature, giving it a name. No, I believe they acknowledge it comes from RR and they simply pay a fee for its continued use within the Sentinel software. I call it the Sentinel Database only as a manner in which to differentiate between WHERE I get one or the other.

On Jun 22, 2016, at 10:45 AM, Jim Stein jdstei3@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Great explanation and I think I get it now as well. I have ARC software for a couple of my older scanners but have stayed away from it on my 536 as I didn't want to buy ARC-536 and then have subscribe to RR also. Now it looks like that is not necessary. But to clarify (and get it into my ancient brain) just a couple of questions:

Using only the RR database downloaded via Sentinel and no RR subscription could I:
- create a FL in Sentinel and then open and edit it in ARC-536, upload it to the 536 and use ARC's additional functions (virtual control etc)?
- will ARC-536 see the Sentinel installed database and allow me to create a new FL from using that data and upload and run it on the 536?

I had the impression that I could buy and run ARC-536 on the scanner OK but that I would have to manually type in all data as opposed to pulling it from the RR database - highly impractical. Evidently I was wrong???

Thanks for the help - and for the patience!

Jim

Subject: Re: [BCD536HP] BCD536HP General Question

Bill;

Sometimes it takes a while for the epiphany to hit and to grasp a concept. I had the same issue years ago with trunking systems. For several years I just couldn't wrap my brain around the concept until a friend explained it in a way that I understood it. It appears that you now "get it"!

As for your other questions: Sentinel is fine for most HomePatrol and x36 owners. It is free and allows one to create and edit Favorites Lists, which accounts for what most people need.

ARC-536 allows more detailed programming of the Favorites Lists as well as virtual control and recording directly to the computer (vs. recording to the SD Card). It still requires Sentinel for database updates to the radio as well as normal firmware updates.

I usually talk more people out of ARC-536 than copies I sell since it really is intended more for radio geeks and gods (like myself). "Normal" scanner users can get by fine with Sentinel.

If you edit or create a Favorites List on the radio, within Sentinel or in ARC-536 any of the other methods will recognize it and edit it without issue. The biggest problem you might have is version control. (What version of the Favorites list do you have at the radio, on the computer etc.)

A lot of people who pay us (ScannerMaster) to perform the initial updates later edit the Favorites Lists we create for them to make them more precise to their needs. I have coached many of our customers (and several customers of competing sellers) how to do that.

On Tue, Jun 21, 2016 at 11:05 AM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Evan, Paul, Bob and John,

I get it! Finally!

I have to preface this reply with a statement "I wouldn't dare ask another question on this topic, never mind how dead the horse is or will be!" I'm sure there are a few of you out there muttering under your collective breaths "Dumb Ass"!

I finally have an understanding of the WHY behind my not getting it. I continued to get hung up on WHERE the updates were coming from. I use ARC programming for as much as possible. I find myself using Sentenel for what I can't get from ARC, such as the firmware updates. I had become so used to the ARC programming (their tab reads "Internet" and when opened, reads "Radioreference") that I was thinking it was the ONLY way to get the data... DIRECTLY from RR... Which requires a subscription. I had ignored the fact that Sentinel allowed for the downloading from Uniden's server, not RR's server. And I ignored the numerous repeated attempts by you all to explain that to me due to this roadblock I had constructed in my thought process. But to my credit, I knew you guys were trying to get through to me, all with the same story... I felt your frustration... "What the hell is this guy's problem?" I also, was frustrated.

But;

When you have four guys telling you "You are dead", you lie down and die! It's that simple. I may not have gotten your meaning up until now, but I was smart enough to know I better get to the root cause of my error in thinking. I knew deep down you all were right. So that made me wro... wro... (It's tough to admit and say)... Wrong. There, I said it. I was wrong and you were right. Happy? I know I am. lol.

Seriously, thank you all again, both those I mention by name and the others (who probably gave up on mealong the way).

This question is finally put to bed. It did however get me thinking about the ARC software as it relates when used in conjunction with Sentinal for the loading of data. Editing my FL's using either or both might cause problems? I'm thinking I should be using Sentinel for all it provides and the ARC only for what Sentinel does not provide. Up until now it's been mixing and matching but mostly the opposite.

Bill

On Jun 21, 2016, at 6:57 AM, n1chu@comcast.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Richard,

At the risk of beating a dead horse, bear with me for raising this concern once again...

I came across what I have copied below while looking at the Town of WINDSOR, Ct., Hartford County, under the download reports tab, in the RR Database...

It refers to "Programming Your Scanner with the RadioReference Web Service".

It appears to contradict your understanding of NOT needing a premium subscription to RR in order to freely program using the Sentinel software. While I do not doubt what you understand to be true, I question my understanding of what you write... So, I ask for your help in understanding your take on the subject. I've read and re-read your post but can not grasp how your post can agree with what I've copied and posted below. Am I misreading and missing your meaning?

Note the "Last updated 2009-03-05" date at the end of what I have copied here. Old material? Needs an update?

Here is what I have copied;

You can download information directly into your radio by using a scanner programming software application that supports the RadioReference.com Web Service Direct Download feature. Please see the following page for information on how to get started using this feature:

(A hyperlink brings us to the following page...)

Programming Your Scanner with the RadioReference Web Service.

Overview

The RadioReference.com Web service provides users the ability to download scanner frequency and trunked radio system information directly from the database to their scanners. The Web service works by providing scanner programming software applications direct access to the database through a set of common, documented communications standards. The graphic below shows the information flow between different components.

(A graphic depiction of the RR data server to your computer running Sentenel Software and finally, to your scanner)

Getting Started

To download frequency and trunked information into your scanner, follow these three steps:

Step 1 - Become a RadioReference.com Premium Subscriber

Users who have a RadioReference.com Account with active premium subscriber status automatically have access to the Web service. To view the complete details on your premium subscription status and to upgrade your account, see the Premium Subscription Information Page. Subscribing is easy and instantaneous by credit card.

Step 2 - Download and Install a Supported Scanner Programming Software Application

A scanner programming software application is required to access the Web service and download information directly to your scanner. These applications function as the bridge between the RadioReference Database and your individual scanner or radio.

Scanner programming software applications are written by numerous third-party organizations and individuals and many of them directly support the RadioReference.com Web service download feature.

To see the complete list of scanner programming software applications that support the Web service please see this reference page:

* Supported Scanner Software Applications
NOTE: it is important that you determine whether or not your individual scanner or radio is supported by a Web service capable programming application. Not all scanners are supported by application developers. See the above supported programs link for details.

Step 3 - Follow the individual software application instructions

Each individual software application will prompt you to enter your RadioReference.com Premium Account Username and Password before being able to access the Web service directly and program your scanner. Please reference the instructions for each application on how to access the Web service.

Last Updated: 2009-03-05 14:30:00

Step one of this process is obviously in question... If it was accurate back in 2009, but has been changed since then to NOT requiring a premium subscription, (or was an incorrect statement from the get go) it should have been updated to reflect the change. If it IS an incorrect statement, a guess on my part why it's still there is... Since WHERE I read it is probably a part of the database accessed by the regional administrators (those responsible for the review of and inclusion into the database for all user submissions), and the overall functions of the site, relating to the policy editing needs, it did not get referenced at the submission level. And was missed?

I bring this up to gain insight to what I may have misunderstood, or, if I AM reading it correctly, in an effort to gain an "Attaboy"! I may have stumbled upon a needed update for a minor oversight by the regional level of submission administrators. But I'm not holding my breath for an attaboy. If I had to guess, I'd bet it is me that is missing the point!

Your (and anyone else's) patience with me will be greatly appreciated...

Bill

Sentinel just allows you two ways to get the data. If you already have a RR subscription then getting it that way just makes it consistent with other ARC products. If not then just go thru the database collected by Sentinel, either off the radio or already resident on your computer.

Additionally, Uniden has never been shy about identifying its source for the database as the RadioReference database, their own manuals say so and they are very open about it in their forums etc. Nothing secret about it.

3574. Re: [BCD536HP] EDACS ownership history

Yahoo group: BCD536HP
Date: 2016-06-22 20:22:14 UTC
From: Gary Saffer
Topic: 3564 Message: 3574

The history as related by Bill is mostly correct. I guess it must be a sign of my advanced age that I remember when all of this happened.

30 years or so ago GE was still heavily into two way radio. EDACS was developed to compete with Motorola Type I trunking. The formats were similar, but incompatible.

Motorola dominated, and still does, the trunking market and went on to develop Type II trunking with Smartnet and Smartzone technology. Type II came with a digital option. Originally that was P16 technology, but that's been obsolete for some time now. GE developed Pro Voice as it's digital format.

GE divested themselves of two way radios to Ericcson, which then sold it, and so on until Harris now owns the technology.

Open Sky was invented by M/A Comm, originally for FedEx. I don't think that FedEx actually ever used it. Doesn't much matter, really. The only two big contracts for Open Sky were New York State and the PA State Police. The New York system was never fully operational and was abandoned. The PA State Police deployed it, but it never worked as intended and they are replacing it with a P25 system that uses both UHF and 700/800. Based on that, I'm guessing Motorola as they make mobile and portable radios that are dual band.

Harris now owns EDACS and Pro Voice and has announced EOL sometime in the next year or so. Which means that they won't be supporting the technology and will probably stop making equipment that can work on EDACS.

A couple of side EDACS notes. When GE owned it, the system would transmit a series of tones that were supposed to simulate the "We bring good things to life" jingle that GE used at the time. There was a piece of hardware that could be installed in a scanner that would mute the tones so you could listen in conventional mode without the scanner hanging up. I think that was called GE Whiz or something like that.

The same two guys eventually figured out how to follow EDACS systems and sold the technology to Uniden. That story used to be on line, but I can't find it any longer. Their website is still up with some information, http://gtrac.ztn.net/.

As I recall, they used the Worcester EDACS system to develop the software as they were both affiliated with WPI at the time.

For those who are really interested or really bored, here is a link to the patent application.

I have what may be a unique problem with my BCD536HP, that I also have with my BCT15X. It will randomly stop on a channel and emit nothing but white noise. This can last from anywhere from 5 seconds to 30 seconds at a time. At first I thought it possibly was picking up a motor, but it is not static like that a motor makes. It also appears to happen during warm weather and dies down during the winter.

The only way I can get it to stop is to turn the squelch up to 15 which reduces my reception, and it even does it there occasionally, but more briefly.

This also occurs more when either scanner is connected to an outside antenna, but, DOES NOT happen with my BCD436HP at all, but there is no squelch adjustment on it.

Any thoughts or clues on how to eliminate it would be greatly appreciated. If I “avoided” channels it occurs on, I wouldn’t be left with much to hear.

To actual hear it happen, you can listen to my BCD536HP by either the 5-0 Radio Pro or Scanner Radio Deluxe app and drill down to "Illinois>Marion County>Centralia Area Fire and EMS Dispatch”, or go to the “Broadcastify” home page and do the same. But, it is more prevalent during the day.

Thanks!

3576. Re: [BCD536HP] EDACS ownership history

You write;
"The history as related by Bill is mostly correct."

I question "mostly"...
But your firsthand knowledge puts you in a unique place...

Please read Wikipedia's complete definition and history as THEY wrote it. I stated I had edited. I don't think I changed the details, just cut and pasted. Some or all of what you relate may be included in the Wikipedia definition and history, helping you better determine if I got it "mostly correct", and where you remember it differently. It's really a matter of Wikipedia getting it mostly correct...

Bill

I guess it must be a
sign of my advanced age that I remember when all of this happened.
On Jun 22, 2016, at 4:22 PM, Gary Saffer ghs159@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The history as related by Bill is mostly correct. I guess it must be a

30 years or so ago GE was still heavily into two way radio. EDACS was
developed to compete with Motorola Type I trunking. The formats were
similar, but incompatible.

Motorola dominated, and still does, the trunking market and went on to
develop Type II trunking with Smartnet and Smartzone technology. Type II
came with a digital option. Originally that was P16 technology, but
that's been obsolete for some time now. GE developed Pro Voice as it's
digital format.

GE divested themselves of two way radios to Ericcson, which then sold
it, and so on until Harris now owns the technology.

Open Sky was invented by M/A Comm, originally for FedEx. I don't think
that FedEx actually ever used it. Doesn't much matter, really. The only
two big contracts for Open Sky were New York State and the PA State
Police. The New York system was never fully operational and was
abandoned. The PA State Police deployed it, but it never worked as
intended and they are replacing it with a P25 system that uses both UHF
and 700/800. Based on that, I'm guessing Motorola as they make mobile
and portable radios that are dual band.

Harris now owns EDACS and Pro Voice and has announced EOL sometime in
the next year or so. Which means that they won't be supporting the
technology and will probably stop making equipment that can work on EDACS.

A couple of side EDACS notes. When GE owned it, the system would transmit a series of tones that were supposed to simulate the "We bring good things to life" jingle that GE used at the time. There was a piece of hardware that could be installed in a scanner that would mute the tones so you could listen in conventional mode without the scanner hanging up. I think that was called GE Whiz or something like that.

The same two guys eventually figured out how to follow EDACS systems and sold the technology to Uniden. That story used to be on line, but I can't find it any longer. Their website is still up with some information, http://gtrac.ztn.net/.

As I recall, they used the Worcester EDACS system to develop the software as they were both affiliated with WPI at the time.

For those who are really interested or really bored, here is a link to the patent application.

What frequencies does this occur o.The last few Uniden scanners I have bought has the same issue on 132.000 and also 157.100. Different models but have had the same issue at a few different locations.

I listened for 20 min just now and I heard it twice. From your description, it sounds like it could possibly be some form of encryption. Do you hear anything else on that frequency?

It does not occur on any one particular frequency. When I happen to be at the desk and catch it, I've tried "avoiding" that frequency and it pops up somewhere else.

What this reminds me of is power line noise.

This may not be your situation al all.

For quite some time, much of my listening was to
VHF and UHF aircraft. Aircraft comms use AM and
AM is more susceptible to man-made noise.

For many summers, mostly during the days, I had
S-5 to S-6 noise in the VHF aircraft band (measured
on the analog S-meter on an Icom R7000, long
discontinued).

It seriously annoyed me.

I had a general coverage portable radio and would
walk the power lines in my local area. As I recall,
it was also strong around 21 MHz that coincided
with the VHF noise.

The noise could be intermittent or pretty steady.

I ruled out marijuana grow lights, another problem
I had with a neighbor.

Then, maybe three years ago, it just went away.

I figured the power company did something, or
at least, something happened. Winters were quiet
and rain helped, maybe by washing insulators,
I don’t know.

My first stab at diagnosing would be to isolate it from existing noise sources. Easiest way to do that would be to put it in the car and drive somewhere for a while and monitor at least twice as long as you'd normally have between noises. If the noise persists, then something in the scanner is causing it and it will likely not be something you can fix yourself.If that results in no noise, then I'd try to incrementally isolate other causes. Different antenna, different room in the house, turning off appliances that operate intermittently for a while to see if the noise goes away (or determine when it comes back). I read a funny story once about a guy working shortwave trying to complete an elusive weak-signal contact for 3 or 4 hours. Eventually, he figured out he'd spent all that time trying to send Morse code to his refrigerator (the compressor motor brushes were wearing out and causing a lot of weird RF hash on the way). Hahaha, yup, and if you have those "new" type light bulbs they actually can cause noise. That's partly why I moved all my radios out to the shop.

First thing I'd do when it happens is unplug & replug the antenna and
see if it stops and returns. (this should prove external source)

If it's external then the fun comes of finding it. Close call may help
with that.

3587. DMR Release Candidate 1

I know that we'll need to merge the forked code for the Motorola Patch bug, still, but with this version DMR seems to be set.

Of course, still need to modify Sentinel and the RRDB Database processor, too.

Release notes (and password for the good stuff) is in the zip file at:

3588. Re: [BCD536HP] BCD536HP & Static or White Noise

Yahoo group: BCD536HP
Date: 2016-06-24 19:49:20 UTC
From: TLFerg53
Topic: 3575 Message: 3588

Well, I “avoided” a second frequency it was occurring on a lot, and that was used very little, and it has dramatically reduced the number of occurrences so far. We’ll see what happens now and what I may need to do next.

Thanks for all the help, ideas and support!

Tim

Purely for my non-technical knowledge of this topic, what is different between the original BCD536HP Scanner and the Phase II version? At least the wi-fi dongle is, anything else?

3591. Re: [BCD536HP] Uniden BCD536HP and Uniden BCD536HP Digital Phase 2 Differences

There is only one BCD536HP. Whoever told you differently was mistaken.

Joe M.

You are mis-informed, there is only one versions of the 536 -all have Phase 2 and wifi

You’re probably thinking of the “Home Patrol” models, the “HP-1” and “HP-2”, the main difference being that the “HP-2” will receive “Phase II.

The 536, as has already been pointed out, was “Phase II” ready when it was released.

Or, possibly you are referring to the firmware updates for the newly added, optionals, such as DMR capabilities (for the BCDx36HP radios)... Same radio, added system types which cost extra.

You can order the radio by itself, and add any newer capabilities at any time (purchasing the licenses from Uniden), and install the licensed firmware yourself, or in some cases, have the dealer (a specialty dealer like Scanner Master as opposed to a Walmart for example) install the optional extras, for an additional cost (which includes the license cost and any dealer prep)... But you need to check with your dealer in that case. I am not sure how a specialty dealer would arrange the license acquisition from Uniden.

Bill

Well, actually, it is one-frequency trunked (using multiple talk groups on one frequency and controlled by signaling).
Not sure if we made up that term or not... :)

3605. Why my Sentinel won't load FL to my 436

Yahoo group: BCD536HP
Date: 2016-07-01 16:10:58 UTC
From: tom kosner
Topic: 3605 Message: 3605

Ever since I received my 436 back from Texas, I cannot get my FL to write to scanner as they took out my original SD card with the FL on it and programmed a card with the Nationwide and California on it and sent it back. Since that time I have bot been able to write my FL to the unit so I had to create via You Tube, my own list from in the scanner itself. Guess that's my only way. So, do I delete the originals from the Sentinel and start over and try to write it or just leave it the way I have it?

Sent from Yahoo Mail on Android

Have you updated Sentinel? Sounds like that's the problem.

From: N1CHU
Topic: 3595 Message: 3607

I've found color code, time slot, frequency and talk group... I chose the DMR system type. Then I tested by transmitting with my DMR transceiver. But still no joy. What am I missing?

Bill

Had the same thought-radios were sufficiently separated... But it's also a moot point, didn't really need to try that. Instead, lock the scanner down on a known talk group and monitor the ham transceiver for activity... No joy.

3612. Re: [BCD536HP] DMR Prerelease 2 with Sentinel

Yahoo group: BCD536HP
Date: 2016-07-01 23:38:13 UTC
From: N1CHU
Topic: 3595 Message: 3612

One thing I didn't do... After I chose "ham" as the service type, I neglected to go into "Select service types and turn "ham" on. After I did this I believe I heard something.

But previously I had the radio locked down on the same talk group but heard nothing. I knew I wouldn't hear anything if it wasn't scanning the service type I assigned to it and then neglected to turn that service type on... But would I not hear when I locked the radio down without turning on that service type?

On Jul 1, 2016, at 6:54 PM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Had the same thought-radios were sufficiently separated... But it's also a moot point, didn't really need to try that. Instead, lock the scanner down on a known talk group and monitor the ham transceiver for activity... No joy.

No. I just posted my latest goof! But it's still got a couple of confusing aspects to it.

That said, it has nothing to do with the DMR option or the manner in which we were instructed to upgrade the scanners. Sure, it would be easier if RR database were populated with the DMR systems, but I'm sure that will come in time.

I haven't finished checking out Sentinel Software... Gotta reread and figure out why I don't see the improvements. But it's a Beta? I can wait for the full version.

Subject: Re: [BCD536HP] Why my Sentinel won't load FL to my 436

  Have you updated Sentinel? Sounds like that's the problem.

Sent from my Verizon Wireless 4G LTE DROID

"tom kosner raidertom@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

Ever since I received my 436 back from Texas, I cannot get my FL to write to scanner as they took out my original SD card with the FL on it and programmed a card with the Nationwide and California on it and sent it back. Since that time I have bot been able to write my FL to the unit so I had to create via You Tube, my own list from in the scanner itself. Guess that's my only way. So, do I delete the originals from the Sentinel and start over and try to write it or just leave it the way I have it?

3617. RE: [BCD536HP] DMR Prerelease 2 with Sentinel

Yahoo group: BCD536HP
Date: 2016-07-02 00:32:24 UTC
From: Dewey
Topic: 3595 Message: 3617

I don’t know about that… if you are manually holding on a channel that has the service type for that channel turned off, I would think that you would still receive the comms. I *believe* that Service Type comes into affect when scanning, and what is loaded when powering on or coming out of the menu. The fact that he was able to hold on the channel means that it was loaded.

Dewey

Do you know if the newest beta of Sentinel shows a different version number? (Click on Help in the program.) I'm not sure if normal practice dictates beta releases sport a newer version tag, or not... It may be that only finalized updates warrant it.

On Jul 1, 2016, at 8:24 PM, John johnstark@earthlink.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Yup, BETA, and it sounds great here ??

No. I just posted my latest goof! But it's still got a couple of confusing aspects to it.

That said, it has nothing to do with the DMR option or the manner in which we were instructed to upgrade the scanners. Sure, it would be easier if RR database were populated with the DMR systems, but I'm sure that will come in time.

I haven't finished checking out Sentinel Software... Gotta reread and figure out why I don't see the improvements. But it's a Beta? I can wait for the full version.

John, just a bit more clarification please... I get that I wouldn't hear the talk group if I neglected to turn on that service type while in scan mode... But does it also hold true (I still would not hear anything) if I stop scanning and park (hold) on that same talk group?

On Jul 1, 2016, at 8:22 PM, John johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

3621. DMR Favorites List for Connecticut

Yahoo group: BCD536HP
Date: 2016-07-02 11:53:03 UTC
From: n1chu@...
Topic: 3621 Message: 3621

In case anyone is interested I've compiled a Favorites List of the Ct. ARES for my BCD436HP. The way I programmed was to label the system as CT ARES DMR. That's how the display reads. For department I show BRISTOL (the repeater site closest to me) in the display when scanning, and the various alpha titles assigned to the talk groups when the scanner stops on a busy channel. And the lowest third of the display shows the talk group number assigned to the talk group.

I've done this for only one repeater site. There are many other ARES repeaters in Ct. (They piggybacked onto the state police trunked system, using tower sites throughout the state) but they all use the same talk groups... To add the additional repeaters to this FL, it wouldn't be much of a chore if someone wanted to fill out the statewide system, just duplicate my FL for each additional repeater and then edit the site names and frequencies for those additional repeaters.

I hope to add this FL to the files section here and RR later, in the hopes some interested party will review it. My thinking is there may be a better way to program the system before I submit it to RR for inclusion into their data base.

Bill

Great info Wayne, thanks

On Jun 5, 2016, at 7:32 AM, Wayne M wa1pma@gmail.com [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Hi Bill,

You may want to look at the 2 in 1 laptops and also Trio makes a 10" tablet with attached keyboard that runs Windows 10 which would load all the software. It has a slot for a SDHC card to expand the storage. I can run Sentinel, Butel for 3 different scanners, and some other ham programs on the Trio. If you really need Butel etc stay with a Windows 10 OS tablet and make sure it's the latest version of Windows 10. There was an earlier version for tablets that was very limited. ALso the MS Surface will work. Price is a consideration though.... If you need more than one USB port at a time, a USB hub will get it done.

Wayne WA1PMA

>
> While traveling, I'd like to pack a smaller device where I can load my programming software. I've got a deal on an android tablet with a USB port but not sure if I can use Sentinel AND the aftermarket Butel software on it. I'm guessing not, at least not with Butel. If not, I'm asking all to share what they have come to depend upon, the consideration being physical size.

3623. Re: [BCD536HP] DMR Favorites List for Connecticut

Yahoo group: BCD536HP
Date: 2016-07-02 16:12:09 UTC
From: N1CHU
Topic: 3621 Message: 3623

Using ARC 536 Pro (it now provides for DMR) I was able to fill out the Ct. ARES repeater sites in Connecticut. I also included the PVRA Brandmeister system. The file is about as comprehensive as it can get... For Ct. You can visit www.ctares.org for the ARES systems and do a search for PVRA Brandmeister for the two other DMR systems I am aware of. Something like 30 ARES repeaters and 2 PVRA systems.

When I finished compiling, I saved it in ARC536PRO and Sentinel. It's not going to the files section until or unless there is the need for it as I'm having a job trying to park it there.

Bill

Not sure that TG would be loaded if the type isn't selected. Not sure actually.

3626. Sentinel update to 1.10.02

Yahoo group: BCD536HP
Date: 2016-07-02 15:37:12 UTC
From: tom kosner
Topic: 3626 Message: 3626

I am trying to find an update for my Sentinel. I have 1.06, need to have 1.10.02 as I have subscribed to ProVide on both of my X36 scanners. Both my scanners have the 1.10.02 firmware but my Sentinel is 1.06. Any help is appreciated

1.07 rev 2

Sent from my Verizon Wireless 4G LTE DROID

"N1CHU n1chu@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

Do you know if the newest beta of Sentinel shows a different version number? (Click on Help in the program.) I'm not sure if normal practice dictates beta releases sport a newer version tag, or not... It may be that only finalized updates warrant it.

On Jul 1, 2016, at 8:24 PM, John johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Yup, BETA, and it sounds great here ??

Sent from my Verizon Wireless 4G LTE DROID

"N1CHU n1chu@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

No. I just posted my latest goof! But it's still got a couple of confusing aspects to it.

That said, it has nothing to do with the DMR option or the manner in which we were instructed to upgrade the scanners. Sure, it would be easier if RR database were populated with the DMR systems, but I'm sure that will come in time.

I haven't finished checking out Sentinel Software... Gotta reread and figure out why I don't see the improvements. But it's a Beta? I can wait for the full version.

Update Sentinel via the Update button in program. If it doesn't update then it is up to date.

From: N1CHU
Topic: 3595 Message: 3629

Well, now that I've got the scanner receiving DMR it's an easy thing to check. I wasn't sure it was programmed correctly before. Butel just released an update for their 536 software. It now recognizes DMR. And it was a breeze to program. Yes, I had to plug in the parameters instead of downloading them but that too will go away once we propagate RR. I think I'm going to submit my DMR FL (Ct.-DMR) to them after I study how to properly submit.

The DMR submission is the same as others, just make sure to add the proper LCN if trunked and Color Code for all.

I like that Sentinel automatically sets empty Color Code to Search!

I neglected to turn on that service type while in scan mode... But does it also hold true (I still would not hear anything) if I stop scanning and park (hold) on that same talk group?

Topic: 3631 Message: 3632

Just checked and got the same thing. I get the feeling that it’s a server issue as I get the same thing when using the HomePatrol Sentinel as well.

I've never heard that either, but I can't say with 100% certainty he is wrong. Maybe it's just that it always goes down during holidays when there is nobody in the office who can reset it. But, I know UPMan has reset it remotely in the past. Was that during a holiday? I don't remember.

It is plausible that they might shut down the servers during holidays to thwart hackers, but on the other hand they ARE servers, and should be serving. Maybe some lobbyists got the government to grant servers time off. Computer rights? I seriously bet there is a group who fights for that!

I guess only UPMan would be able to verify which is correct.

Date: 2016-07-05 07:21:07 UTC
From: John
Topic: 3631 Message: 3639

??? Since when?

There were storms, maybe that caused an issue that even a reset can't fix

But they don't just shut down the servers due to holidays. Many a holiday I have done DB updates.

Sent from my Verizon Wireless 4G LTE DROID

Maybe he was referring to...

"If a breakdown SHOULD occur during a holiday shutdown period, it would be reasonable to expect to wait until someone reports back to work. (For all non-critical servers)."

I didn't copy the above from some boilerplate... It was just my take on expecting a wait when something goes wrong on a weekend or holiday in general.

Bill

I think you nailed it Joe. Computer rights! Why not? When we've got ATM's dispensing money. And CHARGING for it if you aren't using an in-network machine! (They should have named them something more appropriate-not starting a naming competition-wrong venue.)

These "Magic Money Machines" are human Teller replacements. They have a work ethic that beats anything a human would ever be capable of. They work 24-7, take no bathroom breaks, vacations or accrued time off. They are paid $0 in salary, receive no retirement, 401K's and get no insurance benifites! They cost the financial institutions nothing. In fact, they save millions in benefits and salaries. Yet, when we use an out-of-network machine we get clipped a fee from the bank owning the machine and again, from our own bank. They call it "processing fees". I call it "Unmitigated Gaul".

Think of it this way... A salesman for ATM's walks into a bank and offers Tellers at no cost. The banker says "Yea! Where can I get some? For nothing? Wow!"... And then turns around and charges customers to use them. If they can do all that... What's to stop them from shutting down when they feel like it?

Joe's point is well taken- It seems computers have a strong lobby or union is right on!

None of which has the slightest relation to this groups intent... So it's nuff said...

Just sayin...

Bill

From: Gary Saffer
Topic: 3631 Message: 3642

He's wrong. I updated the DB via Sentinel about 10:00PM or so last night. The database does go down once in a while, but there's not pattern to it. Almost all servers go down unexpectedly now and then.

3643. Re: [BCD536HP] Uniden DB down?

Yahoo group: BCD536HP
Date: 2016-07-05 14:56:42 UTC
From: Uniden UPMan
Topic: 3631 Message: 3643

I believe we experienced a power failure yesterday morning that took out our servers for a while. We keep several non-critical sites (including the db update server) in our physical servers here. We see maybe 2 or 3 outages a year...not worth paying for the cloud for them.
UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Subject: Re: [BCD536HP] Uniden DB down?

  I've never heard that either, but I can't say with 100% certainty he is wrong. Maybe it's just that it always goes down during holidays when there is nobody in the office who can reset it. But, I know UPMan has reset it remotely in the past. Was that during a holiday? I don't remember.

It is plausible that they might shut down the servers during holidays to thwart hackers, but on the other hand they ARE servers, and should be serving. Maybe some lobbyists got the government to grant servers time off. Computer rights? I seriously bet there is a group who fights for that!

I guess only UPMan would be able to verify which is correct.

From: Uniden UPMan
Topic: 3646 Message: 3646

http://info.uniden.com/twiki/pub/UnidenMan4/Digitalmobileradioupgrade/DMR_RC_3.zip

I think you guys know the drill by now, but if you are new to the prereleases:

1) This is not applied using Sentinel.
2) We think everything is fixed, but no guarantees.
3) You must read the README file in the above zip in order to get to the good stuff.

3647. DMR Release

Yahoo group: BCD536HP
Date: 2016-07-10 01:17:22 UTC
From: timeichelman@...
Topic: 3647 Message: 3647

Hey all,

I ask please dont' rip my head off if this has been answered,

I've downloaded the current version that UPMAN posted here , I successfully performed the upgrade , Now i'm looking for a little guidance as to how to program a DMR channel in the Scanner , Am I missing something?

3648. Re: [BCD536HP] DMR Release

Yahoo group: BCD536HP
Date: 2016-07-10 08:47:08 UTC
From: MCH
Topic: 3647 Message: 3648

Did you:

1. Purchase the DMR Upgrade from Uniden for $50?

2. Install the key in the scanner? (Settings, Upgrade, DMR)

3. After 1 & 2, it's just a matter of programming the same as any other system, but you select the appropriate DMR mode when entering a new system, enter the frequencies, LCNs (if applicable), and TGs (if applicable).

I would keep it simple at first and just program any frequency you think is DMR in plain conventional mode and monitor and see what the screen shows. That way you'll know if it's DMR, DT3, CON or CAP. Keep track of the Network ID, Site ID, Color Codes and Slots also to learn more about where they belong as part of a system or standalone frequencies. Or maybe someone already has that info and can provide it to you to be sure you program it properly right off then bat. Just for starters...

Presuming DMR channel are now included in the Radioreference database, which we get through Sentinel, wouldn’t this information be programmed into the scanner like any other system would be? Why should we have to “know how to” enter such things?

Eventually, the DMR systems will be supported in Sentinel. But they are
not yet. Either RR has to convert to standard designations or Uniden
will have to convert the data on DL. I believe the former may be underway.

That said, maybe you should re-read the DMR Beta firmware release notes.
They specifically state that you acknowledge that not everything is
complete yet. Granted, just about everything is except the RR import,
but even 95% is not 100%.

Mark,

Joe M. wrote;
"Eventually, the DMR systems will be supported in Sentinel. But they are not yet."

You write "presuming the DMR systems are supported"... Why do we need to know how to manually enter DMR systems?"

You don't. In which case you simply wait until the data base becomes populated with DMR systems and Sentinel is updated. Then use the software to program.

For those of use who don't care to wait, we have the ability to enter manually and use our scanners for DMR system monitoring while waiting for the data base to become populated with DMR systems and Sentinel is updated.

Bill

Because it isn't supported yet.

And besides, you SHOULD know how to program any system by hand anyway. If not, and there is a disaster that knocks out internet for a month or longer and you find your services have changed and you have no internet to program the scanner you are out of luck. It's something that could happen.

Like Joe M. said, RR database is not yet implemented and that's one of the caveats for using the Beta/RC software. Even when the database is up, somebody still needs to populate it so you can download it. And it might be a while in some areas, if ever, so you might still need to experiment on your own.

Besides, that used to be for most of us the best part about the radio/scanner hobby, "the hunt" for the unknown and figuring out stuff, putting the pieces together, etc. Long before all the technology and websites we have now do the work for you....

WHat Ports did you forward? I sent you an email if your willing to help.

3662. City/State Location

Yahoo group: BCD536HP
Date: 2016-07-11 15:18:14 UTC
From: Richard Carlson
Topic: 3662 Message: 3662

Was there ever an option to set location by City/State on the 536 and 436? I have it on my HP1 and HP2 and I could have sworn I had it on the 436/536 before I did the DMR updates.

I tried reverting to an earlier version of the firmware on the 436 but there is still no option for City/state.

Am I imagining things? Could it have been that 12-pack I had for breakfast killing off a few too many brain cells?

3663. Problem receiving DMR from a Tytera MD-380

Yahoo group: BCD536HP
Date: 2016-07-11 09:26:22 UTC
From: photogusa3@...
Topic: 3663 Message: 3663

Hi, I have been testing the DMR Release-Candidate 3 here for the last couple of hours but I am unable to get my 536 to properly receive transmissions from my MD-380.
I have set up several different types of systems. None are getting more than a second or two audio decoded.
I have tried as conventional, this is the most successful I have found so far with 1 or 2 seconds of audio every 30+ transmissions, the DMR and color-code show up a bit more frequently.
DMR one frequency is not getting anything at all, not with the correct color-code programmed nor with search. I tried this as one site with all frequencies and one site per frequency.
I have received a few transmissions on a commercial system (Linfield College, Yamhill Co, OR) but even on here it takes a moment to get the audio.

Does anyone have any suggestions?

I can send my system file as well as my code-plug per private email to any of our experts, I just don't want them on the web.

Thanks and 73,
Achim

How close are you to the 536? You may be overloading the receiver. Try low power and try further away from the scanner. And you definitely want one frequency.

Have you tried setting the frequency to 'FM' and 'Threshold Mode' to Manual? That sometimes help... I know it shouldn't be...

In English, that would be: Register your scanner on the Uniden web site. When they have your serial numbere, you can look up your registered products. When you see your scanner listed , there will be a link for the DMR upgrade and one for the Pro Voice upgrade. Click on either of those and it will take you to a page to pay your $50 and download it (or both – you'll have to do one at a time).

Frank,

At the risk of continuing a discussion concerning group etiquette, I second your comment. Lenny's wisecrack was not called for. (But I see where he's coming from!)

While it's true, some reinforcement of our "due diligence" (at least a cursory search BEFORE posting a question with the group) is necessary from time to time, it certainly can be done in a less crass fashion.

And, before someone jumps in my do-do, yes, I am guilty on occasion of not researching before asking a question here. But the point that needs to be made is this... Protecting our investment... As it applies to encryption, which has the capability of turning our scanners into $500 paperweights...

Aside from proper group etiquette, the practice of monitoring comms (as a hobby or part of your job) is threatened by encryption. More so now with the ease in which it is acquired and applied (digital radio). It's cheap. New comm systems are including "scrambling" at an alarming rate. And why not, it's available for free in some cases as an incentive to purchase. Municipalities include it because NOT doing so puts them in a position of ridicule when asked why not? It was free, or practically free... so what if you don't think you need it... get it and don't use it... And in the future, if a need comes to light, you've already got it!

To my knowledge, the only way to combat the use of encryption is to get involved with budgetary concerns in our towns, cities and states. Simply following proposed expenses placed on referendums won't do it. By the time it is put up for a vote it's too late. Instead, inquire at a town meeting (or whatever forum is appropriate) what is in the pipeline and get in on the ground floor, any planning for a new system. Ask to be notified of any such future concerns as they arise.

This interest by the voters is the point I am trying to make. The more people involved in our hobby the better. Because that means there are added voices asking questions and raising awareness. And that's what brings me to this... I'd be very careful about including insulting comments when someone doesn't do their "due diligence" before posting a question. We need all the help we can get.

Years ago AT&T offered a directory assistance service free of charge... When asked, they would look up a number for you and an automated reply would give you the number. But it was prefaced with "That number IS listed in your directory", a subtle reminder to stop being so lazy and look it up yourself! The intent should not be wasted here. So when I see a post, obvious that no forethought was used, I just chuckle to myself and think "There but for the grace of God go I". And leave it for others to field, or respond POLITELY if no one else does.

Make everyone feel welcome, grow the hobby. The bigger we are the better we will fare when it comes to the enjoyment of our fun pastime. It's an investment in the continuing expectations we have that manufacturers will devote the time and resources to develop newer

toys. It's all about market share. If hobby interest drops due to things like encryption, sales will fall off. If there's not a buck to be made, the product line drys up and our $500 scanners turn into doorstops! Protect our investment!

One man's view,

Bill

Subject: Re: [BCD536HP] DMR Release

Frank,

At the risk of continuing a discussion concerning group etiquette, I second your comment. Lenny's wisecrack was not called for. (But I see where he's coming from!)

While it's true, some reinforcement of our "due diligence" (at least a cursory search BEFORE posting a question with the group) is necessary from time to time, it certainly can be done in a less crass fashion.

And, before someone jumps in my do-do, yes, I am guilty on occasion of not researching before asking a question here. But the point that needs to be made is this... Protecting our investment... As it applies to encryption, which has the capability of turning our scanners into $500 paperweights...

Aside from proper group etiquette, the practice of monitoring comms (as a hobby or part of your job) is threatened by encryption. More so now with the ease in which it is acquired and applied (digital radio). It's cheap. New comm systems are including "scrambling" at an alarming rate. And why not, it's available for free in some cases as an incentive to purchase. Municipalities include it because NOT doing so puts them in a position of ridicule when asked why not? It was free, or practically free... so what if you don't think you need it... get it and don't use it... And in the future, if a need comes to light, you've already got it!

To my knowledge, the only way to combat the use of encryption is to get involved with budgetary concerns in our towns, cities and states. Simply following proposed expenses placed on referendums won't do it. By the time it is put up for a vote it's too late. Instead, inquire at a town meeting (or whatever forum is appropriate) what is in the pipeline and get in on the ground floor, any planning for a new system. Ask to be notified of any such future concerns as they arise.

This interest by the voters is the point I am trying to make. The more people involved in our hobby the better. Because that means there are added voices asking questions and raising awareness. And that's what brings me to this... I'd be very careful about including insulting comments when someone doesn't do their "due diligence" before posting a question. We need all the help we can get.

Years ago AT&T offered a directory assistance service free of charge... When asked, they would look up a number for you and an automated reply would give you the number. But it was prefaced with "That number IS listed in your directory", a subtle reminder to stop being so lazy and look it up yourself! The intent should not be wasted here. So when I see a post, obvious that no forethought was used, I just chuckle to myself and think "There but for the grace of God go I". And leave it for others to field, or respond POLITELY if no one else does.

Make everyone feel welcome, grow the hobby. The bigger we are the better we will fare when it comes to the enjoyment of our fun pastime. It's an investment in the continuing expectations we have that manufacturers will devote the time and resources to develop newer toys. It's all about market share. If hobby interest drops due to things like encryption, sales will fall off. If there's not a buck to be made, the product line drys up and our $500 scanners turn into doorstops! Protect our investment!

One man's view,

Bill

Awesome Paul! Glad to see more info for DMR on the search screen.

Question: Is time Slot there? I don't see a 1 or a 2. I do see a few fields
I don't 'know':
NT and S. I see Nt is 319 and S is 7.. Network / Site?

Thanks :)

What kind of search are you doing? On my searches I see NET and SITE
which is obviously Netowkrk and Site. I also see either Slot 1 or S1
flashing depending which mode I'm in. This is using Quick Search and CC
Search when scanning the channel, and Custom Search.

Someone else asked about the display. I hit hold on one of the systems,
and hit function & 9, which turned off the 3 line display.
It made the print in the display smaller but did add a 4th line and I
did just see a RID show up, so that must be it.
It also appears if you do the function & 9 it covers all systems as I
went to check the other ones and they had all be switched already.

Thanks fort the help.

3686. Moving to trunked systems...

Yahoo group: BCD536HP
Date: 2016-07-18 11:03:24 UTC
From: n1chu@...
Topic: 3686 Message: 3686

This is probably not where this question belongs but I'm hoping someone can definitively direct me to the group or forum it does belong...

It has been my understanding that the reason trunking was introduced was because the finite number of available VHF High band and UHF band frequencies were, for the most part, assigned, leaving no new repeater frequency pairs available. All gone. (In the northeast they were/are assigning little or no use forestry frequencies to complete a needed pair for repeater use.) And when any entity were to transition to their new trunked system on the bands provided by the FCC (ex: 800MHz), they were to relinquish their old VHF High and UHF band frequencies, allowing for the repopulating of available VHF & UHF frequencies.

But when I look at the FCC Weekly Grants, I see license renewals for the old VHF/UHF frequencies for entities that have made the transition to trunked frequencies. Are these entities allowed to continue renewing on a conditional basis? Where they may keep them until there is a request for reassignment? It seems EVERY entity that has moved to trunking is still holding on to their older system frequencies.

My inquiry is made with the assumption the FCC intent was to provide additional available frequencies and do it in a manner that would allow for reducing the need to commit additional bands going forward. In other words, slow the requests for more frequencies by using trunking. But allowing entities to keep their older VHF/UHF systems seems counterproductive.

Why, when before, entities operated on one system in a satisfactory manner, do they now require two systems? Why aren't they relinquishing their older VHF/UHF frequencies?

Again, sorry to post here, where although a relationship in general could be argued, it's more off topic than on, admittedly.

Where I'm coming from;
When I suggested instead of spending $70 grand for vehicular repeaters (for the local fire department which was on a simplex low band VHF frequency, 33.04MHz, in order to fix the portable radio failure to communicate with dispatch directly-eliminate the need to have a higher power mobile unit repeat portable comms) we go to a VHF High band repeater system. But APCO (the regional authority in charge of allocating frequency assignments) told me nothing was available and the radio dealers were suggesting a trunked system instead. I found one frequency available, taken from an adjoining town that went to trunking and got the second from the forestry portion of the band. But acquiring that first frequency was like pulling teeth, wrangling it away from the former assignee, when admittedly, they no longer had a need for it. We ended up negotiating with that town's radio consultant who did a little selling and programming on the side. I suspect it was a bit illegal, paying for programming in order to get the consultant to recommend that other town relinquish the frequency. Which they weren't about to do without the consultant's ok. But it was the fastest route to gaining a repeater pair so we agreed and I was asked to not object. But to this day, I know it was at best a shady deal, them holding us to what amounts to "paying" for a frequency, knowing If I fought them it would take much longer to get the frequency.

But all is well that ends well. We now have an excellent VHF High band repeater system.

From: bob.peloquin@...
Topic: 3686 Message: 3687

The most common reason for moving to a trunked system is that the old system is so busy that you have congestion that limits how much certain departments can use it. For example, Worcester MA once used 2 UHF frequencies for police (east and west) and one for fire. No other departments in the city had radios.

Now along comes the 10 frequency EDACS system in the 800 MHz band and every department had radio communications which never interfered with each other. Big improvement. They went from about 200 3-channel radios to around 1000 multi-talkgroup radios and everyone had their own virtual private 'channel' for their department.

It also made the dealer a butt-load of money selling them radios and programming services. What it did not do was improve radio reception - in fact, it reduced the apparent signal strength and created dead spots in certain areas which used to work fine with the UHF 460 MHz radios. The new 800 MHz system was worse at city coverage than the 460 MHz system with the same repeater location. Never fixed to this day...

So Worcester bought a new set of repeater radios (10) and a high-speed microwave link between two different hilltop repeater sites. It now became a simulcast system that transmitted on the exact same frequency from both locations ON THE SAME FREQUENCIES!!!. EDACS, by default, switches to the next higher LCN for every microphone keyup so all 9 usable frequencies (10th was the control channel) had to be exactly tuned so there wasn't a lot of zero-beating between the two simultaneous transmitters. It never worked right. There is always simulcast distortion in addition to more multipath distortion on this system.

Result was mixed. It did cover the city better but there were still (and still are) some dead spots which give the users (and scanner listeners) fits. Simulcast distortion is a problem for intelligibility and works against the system coverage sometimes.

So what's the solution now that EDACS is an orphan child of a company that doesn't really want it anymore?
P-25 Phase-II (TDMA) is supposedly the savior. It looks like Worcester will be replacing over 1000 radios with brand new Motorola ones (making the dealer very rich) and setting their radio system up as a branch off the Mass State Police P-25 Phase-II TDMA system with 3 repeater sites. Being digital, it will have to have some really interesting tweaks to get these 3, fairly widely separated, sites working properly with the subscriber radios. I anticipate lots of problems including more new and different dead-spots.

So the main reason to go to trunking is NOT to allow handhelds to reach the repeater better - but to make someone a butt-load of money while allegedly improving the radio system (well - it does "improve" it, but doesn't make it perfect) while creating a whole new and different set of problems for the users (which, coincidentally, require time & materials service to 'fix')

Mobile repeaters in a system with VHF-low main channels is an obvious way of fixing the range problem for handhelds. Going to a trunked system does NOT directly solve this problem unless you place multiple repeater sites all across the coverage area or join and existing

wide-area trunked system. That, my friend, costs a butt-load of money and makes your dealer richer while providing dubious improvements to the system which was working well before the whole "trunking" question came up.

Maybe I'm a little jaded, being a Worcester property tax payer... But I know the "new and improved" system is going to end up costing us far more than the existing one and may or may-not work any better. And, by the way, you scanner-users all need new $500+ scanners to receive it now and some (or most) of it will be encrypted.

But I'm not bitter... The heck I'm not!!!

Bob,

I did not advocate trunking was our solution to allow handhelds to reach the repeater better. Please reread my post. I should suggest we take any discussion offline or to another forum (as soon as one is suggested.) I'd be happy to listen to the Worchester history. It sounds like it is interesting.

On Jul 18, 2016, at 9:15 AM, bob.peloquin@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The most common reason for moving to a trunked system is that the old system is so busy that you have congestion that limits how much certain departments can use it. For example, Worcester MA once used 2 UHF frequencies for police (east and west) and one for fire. No other departments in the city had radios.

Now along comes the 10 frequency EDACS system in the 800 MHz band and every department had radio communications which never interfered with each other. Big improvement. They went from about 200 3-channel radios to around 1000 multi-talkgroup radios and everyone had their own virtual private 'channel' for their department.

It also made the dealer a butt-load of money selling them radios and programming services. What it did not do was improve radio reception - in fact, it reduced the apparent signal strength and created dead spots in certain areas which used to work fine with the UHF 460 MHz radios. The new 800 MHz system was worse at city coverage than the 460 MHz system with the same repeater location. Never fixed to this day...

So Worcester bought a new set of repeater radios (10) and a high-speed microwave link between two different hilltop repeater sites. It now became a simulcast system that transmitted on the exact same frequency from both locations ON THE SAME FREQUENCIES!!!. EDACS, by default, switches to the next higher LCN for every microphone keyup so all 9 usable frequencies (10th was the control channel) had to be exactly tuned so there wasn't a lot of zero-beating between the two simultaneous transmitters. It never worked right. There is always simulcast distortion in addition to more multipath distortion on this system.

Result was mixed. It did cover the city better but there were still (and still are) some dead spots which give the users (and scanner listeners) fits. Simulcast distortion is a problem for intelligibility and works against the system coverage sometimes.

So what's the solution now that EDACS is an orphan child of a company that doesn't really want it anymore?
P-25 Phase-II (TDMA) is supposedly the savior. It looks like Worcester will be replacing over 1000 radios with brand new Motorola ones (making the dealer very rich) and setting their radio system up as a branch off the Mass State Police P-25 Phase-II TDMA system with 3 repeater sites. Being digital, it will have to have some really interesting tweaks to get these 3, fairly widely separated, sites working properly with the subscriber radios. I anticipate lots of problems including more new and different dead-spots.

OK, after re-reading your post here's my answer:

It's impossible to obtain new VHF High channel pairs. So why would we (a local government agency) relinquish ours? We might need it someday for something. It doesn't cost much to keep the license active even if we're not using it.

Pretty simple IMHO.

Ok I paid about $100 for both the Pro-voice and DMR. I followed the directions (I think?) and I was only able to input the Pro-voice Key and not the DMR and that was when I went to settings- Upgrade-. I did not even see the ability to input the DMR Key. Was it in the firmware? Can I re-download the Firmware? Better yet is there a way to fix this?

That pretty well sums it up.

There is no requirement to relinquish
licenses. Whoever told you that was wrong.

Why trunking is being pushed by the dealers? They make the most money on
that. It also provides the most communications paths using the least
number of frequencies.

Ok. I guess no one cares to take this offline. My point, which we seem to be missing, is this... Relinquished frequencies in the VHF/UHF Bands would repopulate those bands with available frequencies. But it's all a catch 22. If this were true, (a requirement to return the old freqs) why don't we wait for others to transition to trunked frequencies, turn in their old frequencies and then pick them up? As Joe M. and Bob has said, the reason to go to trunking is because the radio dealers stand to make a buck. But that's not what happened. First, we ran out of frequencies. Because of that, additional frequencies were sought. The FCC provided 800MHz freqs. They also needed a plan to reduce new requests for freqs or they would be right back to the saturation problems on VHF/UHF. But we all know what happens when we use higher freqs such as 700/800 MHz. The signals become more line-of-sight... requiring either higher powered mobiles and portables or a stronger infrastructure (more receiving sites/towers). High powered mobile and portable equipment is impractical. Higher RF fields are a health concern and would also be causing interference with existing electronics, not to mention the comm equipment would need to be engineered to a much higher degree of dependability. So, if we are stuck with 700/800MHz freqs, the added infrastructure was the cheapest way around it.

The FCC didn't open the higher bands because the dealers wanted to sell multi-million dollar systems, they did it because they ran out of available frequencies. I only wish they had re-assigned frequency bands closer to the current VHF/UHF bands. We wouldn't need as many receive/xmit sites like 800MHz.

But I'm sure the FCC has a plan for the future. Maybe trunking in the VHF/UHF bands when they mandate you can no longer keep your old systems assignments.

True, but it also costs much more to GET a license than maintain a license. So, once you have it, you don't want to get rid of it. It can be used for other things. For one, if the new system doesn't work as well, you can return to the older one. For municipalities, the old ones tend to be handed down to other agencies who were using systems less advanced than the old ones. That goes for the old radios, too. And as we are seeing in PA, the older frequencies may get reactivated with newer systems.

Not at all correct. The big boom in UHF (and primarily business) happened in the 80s with UHF repeaters. The 800 MHz band was released in the 80s if not before, so the demand for frequencies happened after the release of 800 MHz, not before.

> The FCC didn't open the higher bands because the dealers wanted to sell
> multi-million dollar systems, they did it because they ran out of
> available frequencies.

True on the first part - the bands were opened long before trunking was released. Wrong on the second part. People moved to 800 MHz because it was new and because you could get clear frequencies. Governments are like babies - they are memorized by new and shiny things. If it's new then it has to be better, right? It also makes them look like they are DOING something by putting up these new systems, and the appearance of doing something is how they keep their jobs. But I digress...

Just look at the trend. Everyone was on Low Band. Then they moved to VHF High Band. Then they moved to UHF, and then to 800 (now some to 700). Then some moved back to UHF/VHF because of performance issues.

Trunking systems were sold because they are more frequency-efficient and because the dealers could lock the customers into their systems. Then the government made industry develop P25 as a method to prevent this

lock-in of customers and promoted it - even mandating it if using federal funds.

Anymore, dealers push trunked systems because they make the big bucks on them compared to a conventional system. They even help municipalities get grants to pay for them because most could never afford them on their own.

The REAL and ONLY program to get more frequencies was the 2013 narrowbanding mandate by the FCC. That, in theory, opened up twice the number of frequencies. Many businesses simply abandoned radios during that time because new systems were too expensive compared to cellphones. What was left was largely gobbled up for use by networked trunking systems which not only are not more spectrum-efficient overall, but are spectrum hogs by retransmitting the same info on dozens of frequencies rather than one. Of course this increases the coverage area, but it also magnifies the need for clear frequencies - especially for dedicated control channels that are effectively exclusive users of that frequency for 60-75 miles.

Joe M.

Christ! How you DO love to split hairs. Cost was never part of my original post-I have no interest in cost or profitability other than debunking the use of it as a reason for making available a particular band of freqs.

You say that the 800 MHz freqs were available before they ran out of UHF Band... So my statement about first running out of frequencies is "Not at all correct". Maybe I SHOULD have better stated it as "First, the FCC ANTICIPATED the saturation of the UHF band made available in this anticipation, the need.

I'm not going to split hairs with you. In fact, I find trying to stay on your good side more of a challenge than I care to take on. I don't like those who "shoot from the hip" unless they are peace officers being shot at. To stay in the same vinacular, you are badge heavy. You were very helpful and I thank you for that. But that's as far as it goes... Not liking your negative attributes so much. Here's wishing you and Paul all the best.

I'll still be kicking around but doubt I'll do any posting. Just monitoring.

Governments are like babies - they are memorized by new and shiny things. If it's new then it has to be better, right? It also makes them look like they are DOING something by putting up these new systems, and the appearance of doing something is how they keep their jobs. But I digress...

Just look at the trend. Everyone was on Low Band. Then they moved to VHF High Band. Then they moved to UHF, and then to 800 (now some to 700). Then some moved back to UHF/VHF because of performance issues.

Trunking systems were sold because they are more frequency-efficient and because the dealers could lock the customers into their systems. Then the government made industry develop P25 as a method to prevent this lock-in of customers and promoted it - even mandating it if using federal funds.

Anymore, dealers push trunked systems because they make the big bucks on them compared to a conventional system. They even help municipalities get grants to pay for them because most could never afford them on their own.

The REAL and ONLY program to get more frequencies was the 2013 narrowbanding mandate by the FCC. That, in theory, opened up twice the number of frequencies. Many businesses simply abandoned radios during that time because new systems were too expensive compared to cellphones. What was left was largely gobbled up for use by networked trunking systems which not only are not more spectrum-efficient overall, but are spectrum hogs by retransmitting the same info on dozens of frequencies rather than one. Of course this increases the coverage area, but it also magnifies the need for clear frequencies - especially for dedicated control channels that are effectively exclusive users of that frequency for 60-75 miles.

There's already trunking in the V/UHF bands, but just like encryption, how does that relate to the x36HP topic?

What I think is funny is the City of Phoenix invested in a multimillion dollar 800 system. Now are migrating to 700 because there are not enough 800 frequencies available to expand the system. And the kicker is they do not use the trunking system for "Hazard" calls (AKA - fires) because it is not reliable in buildings. Fires, HazMat, etc are worked on the good old VHF frequencies.

I simply do not believe that the FCC released the 800 MHz band in the early 80s or late 70s in anticipation of a need that would occur 20 years later any more than they released UHF due to VHF overcrowding or VHF due to Low Band crowding. Bands were "released" as equipment was developed.

I never said cost was a reason for releasing frequencies either.

What I disagree with you on is your statement that (direct quote) "First, we ran out of frequencies. Because of that, additional frequencies were sought. The FCC provided 800MHz freqs."

That cannot be true when your claimed result happened before the cause.

This is not splitting hairs - it's remembering history as it happened. The FCC did not release a band in the 80s (or 70s) as a result of what happened in the 90s. Time just does not work that way despite what the Sci-Fi writers would have us believe.

As I said, the NARROWBAND mandate (2000's) was a result of the overcrowding (90's), and that had nothing to do with 800 MHz. They also saw that as a means to increase the sales of licenses, so money does factor in. The same was done with the upper TV band and was planned for channels 2 through 6 but that hasn't panned out yet. The FCC makes a boatload of money from spectrum auctions.

If you see this as splitting hairs, so be it. I don't see it that way.

Indeed; The FCC did at one time require public safety to relinquish VHF and UHF spectrum to qualify for NPSPAC 800 MHz frequencies. In addition, some years later, all Part 90 licensees were required to audit their licenses to determine if any frequencies were unused and to certify that construction was completed on remaining frequencies. That being said, in some areas, fire departments desired to stay on VHF or UHF conventional frequencies while their police and public works constructed 800 MHz conventional. So there were waivers and hold outs. Some technology such as paging and fire station alerting did not conform to trunking technology, so these frequencies were often retained.

And yes a lot of the FCC decisions, while driven by industry (M) were forward looking.

I am sure someone on the thread will expand on the time frame of these actions.

Topic: 3647 Message: 3705

Hello, I have noted something in the past week and was wondering if others are seeing it or if I am doing something wrong on the programming.
Programmed in several DMR systems and single freqs. (by hand)
Giving each their own Favorite list # say 1 through 9.
I was scanning / searching say 3, 5, 8 & 9. I turned off the radio and later turned it on and it says nothing to scan. Did nothing but turn the radio off and on.
Someone told me to change the system quick key from what it was say 5 to 7 and then change it back to 5. That worked and it then started scanning it.
This morning I turned off radio, un plugged it and moved to van. Plugged it in and the only Favorite showing was # 1, all the others were gone. Had to go in and turn on each system favorite on order to get them to scan. I returned home and brought radio back in and plugged in and this time all the scan lists were still on that were on before turning off.

Wondering if these 2 issues are related someone or if both different , any thoughts on what to do.
Thanks,
Scott

Two thoughts:

Sirst, how are you turning it off? You have to use the front on/off switch. Simply removing power will not let it write the state to be able to restore that state later.

Second, you may be seeing signs of the SD card going bad - especially if it's not the above issue.

From: shawnaolson@...
Topic: 3707 Message: 3707

Uniden Support…. Is there anyone home… On 7/8/2016 I was reading about the DMR Firmware and decided that I would buy it.. So I went to myuniden website and was updating my scanner ENS (Because it was not in there).. After entering the ESN and Sum I get an error on their website “Check Sum passes. in Please go back by clicking your back button and enter a valid 8 digit serial number using integers.

You must enter 8 digits and only 8 digits for the scanner's Serial Number.”

After looking at the back of the scanner, The menu on the screen and with the sentinel software.. to get the ESN and SUM (ALL THREE ARE THE SAME IT STILL WILL NOT LOAD). So I open a support ticket.. I included the description of the problem with photos of the scanner and screenshots of the ESN and SUM.. It took 11 days to have someone respond with a “Dear Valued Uniden Customer,

Please register your scanner at my.uniden.com.
To get your ESN number: On your scanner press MENU>SETTINGS>SEE SCANNER INFO>FIRMWARE VERSION.
The ESN will be the 3rd line and the Check sum will be the 4th line.
You will then be able to purchase the DMR key.
When you get your DMR key you need to make sure your using Sentinel Version 1.06.00
When you have these done, press Menu on your scanner, Settings>Upgrade DMR. You will enter in your number by turning the knob on top of the unit and pressing 6 to go forward and press yes(E) to save the number.

Thank you for Choosing Uniden!
xxxxxxx
Uniden Tech Supervisor”

Did you even read the ticket and look at what I sent…

So I was nice and replied again with the screenshots… I betting it will be another 11 days before I hear back..

I have worked for 20 years in computer services and electronics field. If I had done customer service this way I would be forced to pump gas for a living…

Did you READ the instructions? The ESN is NOT the serial number on the back of the scanner. It's in the scanner, not on it.
Thousands have NOT had any problems doing this.
Follow the instructions and it works fine. And the reply they sent you also has the instructions. FOLLOW THEM. Pretty simple actually.

Topic: 3707 Message: 3710

Thank you John for you comments.. I agree thousands have had no problems... Your comment about the serial number is not 100% correct.. He is a quote from
http://info.uniden.com/UnidenMan4/DigitalMobileRadioUpgrade
http://info.uniden.com/UnidenMan4/DigitalMobileRadioUpgrade.

Once registered, you will see a link to add an ESN to your scanner below to your registered scanner. Click that link and follow the on-screen prompts to enter the ESN and Checksum you recorded above (we enter the first 5 digits of the ESN for you, you only have to enter the last 9 digits).

"* If you cannot physically access your scanner's serial number, Replace the "260" in your ESN with the letter Z. For example: 37626038001234 = 376Z38001234"

I have pulled the ESN with the Sentinel software(Saved Screen Shot), I have the Firmware Version screen (Photo take with Phone) and also the SN from the back.. All three location come out to be the same.. And it still gives me the

"Check Sum passes. in Please go back by clicking your back button and enter a valid 8 digit serial number using integers.

You must enter 8 digits and only 8 digits for the scanner's Serial Number."

To me it looks like a problem in their database that runs the website.

3711. Ham Frequencies

I would export the Hp-1 file to an HPE file then import that into the 536. You may have assigned a Quick Key that is not enabled, or Monitor and/or Download might not be enabled in the profile.

You are entering the last 8 digits and not the first 8, correct?

Make sure you input ESN where it says ESN and SN where it says SN. As
you pointed out, they are not identical.

3714. DMR Release and last Chance for $50

Yahoo group: BCD536HP
Date: 2016-07-22 14:11:08 UTC
From: Uniden UPMan
Topic: 3714 Message: 3714

I've posted the DMR Release firmware to
http://info.uniden.com/twiki/pub/UnidenMan4/DigitalMobileRadioUpgrade/DMR_Release.zip

Next week, I'll incorporate this version into the Sentinel update system so that it will appear for everyone who checks using Sentinel.

At that time, the cost for the upgrade will increase. So, if you've been holding back on purchasing the key, now would be a great time to pull the trigger.

This increase will not reflect the final, final price. We expect that full DMR support in the main database will be incorporated in mid- to late-August. And, then, there will be some additional time while additional systems get documented and updated at RadioReference. So, the final, final price will start being reflected around the beginning of October.

Thank you for all the feedback during the pre-release period. I was quite impressed with the positive, constructive feedback we received from all of you.

Also, we should all thank our tireless software engineer, who was up late nearly every night, and worked through the night on more than one occasion as he evaluated your reports and fixed, improved, and polished the final product. He is taking a few well-deserved days off. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Thanks Paul! So I'm confused - will the Sentinel app 'support' DMR next
week or not until mid / late august?

Thanks :)

It supports DMR, now.
Next week, it will still support DMR. However, the main database (imported from RadioReference) will not yet have any DMR systems. That will come later in August. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Oh - Crud, you're right, sorry. LOL Brainfart! I mainly use Sentinel for automatic downloads from RR, not too frequently hand programming so to speak :)

Thanks - yep, I have even seen a few RR databases with more DMR data - no color code or TS, but at least radio ID. So we're getting somewhere!

3720. DMR Release and last Chance for $50

Yahoo group: BCD536HP
Date: 2016-07-22 20:37:40 UTC
From: James F. Boehner MD
Topic: 3714 Message: 3720

Paul,

I tried to monitor a simplex MotoTRBO signal without success. 446.075 MHz/CC1/TG99/(TS1).

Does this version decode simplex?

If you want to monitor DMR systems, it will do everything.

If you don't want to monitor them, it will do nothing for you.

Did you set it as instructed? I believe that includes the FM mode (not NFM as you would expect), and I forget the other criteria.

There is no "plan" - per se.

Business have been switching to DMR (or other digital modes) for years.
Some will never switch while others have been there for years.

This applies to all areas.

There is a low chance of Public Safety switching to DMR since it's not
designed for Public Safety (P25 is the Public Safety mode), but of
course that will not stop some municipalities from using it due to the
lower cost of equipment. Same with NXDN.

From: Evan Platt
Topic: 3725 Message: 3727

I can't remember if it was f/b or another forum, but I made a similar comment, and was quickly chastised... In some areas apparently DMR is VERY popular for public safety... I can't recall exactly where. But here in N. Cal, there's no PS on DMR that I'm aware. Closest is a ambulance company, but they aren't a 911 system ambulance.

Understood. Where I am coming from is what Motorola's recommendations are. Their DMR equipment is not made to Public Safety specs. For Public Safety they recommend the P25 equipment. Likely if someone using DMR for Public Safety, if there is ever an issue with the performance, Motorola cannot be held liable because their recommendations were not followed (someone purchased business radios for PS - taking on the resulting liability themselves). At least that's the theory.

They make some radios such as the XTS/APX series for Public Safety, and other radios such as the XPR for Business and Industrial users. That is how their literature is designed and written, too.

3729. DMR - What does it do for the metro cities that implement it?

Yahoo group: BCD536HP
Date: 2016-07-22 21:23:04 UTC
From: John Walker
Topic: 3725 Message: 3729

Good info.

I have not read or heard much about who may use DMR and the benefits of its use.

Subject: Re: [BCD536HP] DMR - What does it do for the metro cities that implement it?

There is no "plan" - per se.

Business have been switching to DMR (or other digital modes) for years.
Some will never switch while others have been there for years.

This applies to all areas.

There is a low chance of Public Safety switching to DMR since it's not
designed for Public Safety (P25 is the Public Safety mode), but of
course that will not stop some municipalities from using it due to the
lower cost of equipment. Same with NXDN.

Worked on both my 536 and the 436 flawlessly today.

Now to program some DMR in... manual programming = full body shiver ;-)

Install the version of Sentinel that came with the firmware. It supports DMR so you can enter the info in Sentinel and not from the scanner.

DMR is a digital voice/data mode. Business have been switching to DMR
(or other digital modes) for years. Some will never switch while others
have been there for years.

You might want it if you want to monitor businesses (or anyone else) who
uses it. It's also used in the ham realm (but isn't everything used there?).

DMR = Digital Mobile Radio (I believe). AKA Moto TRBO. It's a digital format of radio used by ham's and by organizations.

3740. Show band plans for a trunked site?

Yahoo group: BCD536HP
Date: 2016-07-23 06:32:34 UTC
From: Evan Platt
Topic: 3740 Message: 3740

Hi All,

So I know I asked this a while back but can't find the thread... I need to find the band plan for a p25 site.

I thought I'd simply need to let the x36 (I have both) listen to the system for a bit, then read the radio back into sentinel, and then click on the site and show band plan. I looked at a number of sites for systems I listen to very frequently, and they're all blank for band plan.

Is there something else I need to do?

Thanks :)

3741. Re: Show band plans for a trunked site?

Topic: 3740 Message: 3741

Ahh - so found it on the scanner itself. It apparently doesn't get
downloaded to Sentinel?

From: John
Topic: 3725 Message: 3742

Here 98% of DMR or TRBO is business type stuff.
However there are two public safety users. One an ambulance service and the other is Methodist hospital. They actually use it in several ways at the hospital. One is simplex in hospital use. One is a trunked system that both of their hospitals use and the last is Lifeline Center which is used for all of Methodist hospitals transport ambulances and for all medical flight helicopters in the state. It's also the system all Lifeline helicopters are dispatched on in the state. They use a regional radio system ERS which covers most of the state.

If it's P25, it will be broadcast on the control channel as long as it's not an IMPLICIT system. If it is, you will need to find the unique bandplan for that system as there is no standard.

Do what you said, but look at the bandplan in the scanner - not in Sentinel.

Thank you for the input. I’ve been playing with the amateur radio idea for some time, but haven’t made up my mind.

I would love, however, to have a radio that can be set to the tone out (page) frequencies of our two local fire departments (city and rural/volunteer) so I only hear their calls during the night. I, after retiring five years ago, was asked by the general manager of one of our local radio stations if I would take photos of local fires and accidents to go with their web news stories as I was available. I don’t mind hearing everyone during the day, but it can be annoying at night.

Thanks, again!

Tim

The 536 will do that. Read up on the "Fire Tone Out" feature.

It will only evaluate one frequency, so if you have two, you would need
two scanners. Even the recent analog-only models have it, so you can
purchase a less expensive scanner if you want a dedicated FTO receiver.

3747. INTRIGUING... An observation...

Yahoo group: BCD536HP
Date: 2016-07-23 10:39:36 UTC
From: n1chu@...
Topic: 3747 Message: 3747

Intriguing - to arouse the curiosity or interest of, appeal strongly to, captivate...

Just wondering how many non-scanning people, after surfing the Internet and unintentionally falling into one of the many news groups, help groups, (such as this one and ones relating to the different makes/models of scanners) end up being "intrigued" by scanning.

After reading some of the question/answer threads constantly floating within, their curiosity getting the better of them, to the point of doing further research. And end up buying a scanner!

Does anyone remember knowing/hearing of someone that got their start in scanning in this manner? I can vouch for one person who was introduced to scanning in this manner. Knowing I was into scanning, he asked about what he had read on the Internet and ended up buying a scanner (after I loaned him my old BCD396XT for a couple of weeks he was sold!)

3748. PROPRITARY vs ENCRYPTION. Are they one and the same?

Yahoo group: BCD536HP
Date: 2016-07-23 10:58:20 UTC
From: n1chu@...
Topic: 3748 Message: 3748

Certain radio systems use manufacturer's PROPRITARY modes that are owned and closely guarded by the manufacturer. OPENSKY comes to mind. A scanner can not decipher the comms (at least where it's intelligible). My question is this... Is the PROPRITARY method used considered ENCRYPTION? Or, is it simply the use of a "solely owned" unique set of firmware/hardware used in the design? And, if the latter is true, encryption can be added on top of PROPRITARY?

Not that it would make a difference given the PROPRITARY mode makes the need for encryption overkill.

Is it
PROPRITARY vs ENCRYPTION? Or
PROPRITARY equals ENCRYPTION?

3749. Re: [BCD536HP] PROPRITARY vs ENCRYPTION. Are they one and the same?

Yahoo group: BCD536HP

Topic: 3748 Message: 3749

No, they are different terms with different meanings. OpenSky is proprietary, and the fact that there are no consumer radios capable of receiving it makes it less susceptible to monitoring by it's obscurity. This was the same for other modes like ProVoice, DMR, NXDN and even P25 until radios were available to monitor them.

These modes can be both. It is very possible that OpenSky might be encrypted as well, but the fact that it is proprietary does not make it encrypted, just obscure.

The BCDx36HP radios do the tone out. That is the purpose for the '436 in my bedroom for the same reason (34 years and retired 10 ago), when it isn't used in the travel vehicle. Then one 536 is for the RV, the other is for the house... it's just a familiar background noise after so much time ...

That is, of course, assuming the fire department uses 2 or 5 tone. :) We have a number of departments here that are either P25 trunked, or simply use a data signal or some other method to tone out. (nothing is heard over the air to tone out).

How/where does one enter the frequencies, slot and CC for a Connect Plus system in Sentinel?
Is there an online tutorial of how to enter Digital int

Thank you! The city's FD is on it's own frequency, but the rural dept. shares a frequency with several other departments in the county.

Tim

On Jul 23, 2016, at 3:56 AM, mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The 536 will do that. Read up on the "Fire Tone Out" feature.

It will only evaluate one frequency, so if you have two, you would need
two scanners. Even the recent analog-only models have it, so you can
purchase a less expensive scanner if you want a dedicated FTO receiver.

The same way as for any other trunked system. Create a new system of the type "MotoTRBO", then create a new Site, then enter the frequencies and color codes, then create a new Department and enter the TGs.

Yep. Fortunately, I live in a county that doesn't even HAVE trunking (El Dorado, in CA) for emergency services (not needed and the terrain makes it brutal for UHF). It's mostly 2 tone.

On the bad side, 2/5 tone takes a LONG time to dispatch, must be repeated on a few different sites (terrain) on major events. The delay times out, even if extended. With a HIGH dispatch level for wildland (all this week); it can often take a couple minutes to get to the dispatch message. So hearing the pre-alert accurately is critical for responders.

I only use it for my immediate area stations and unit (medics have their own from fire).

However, back on topic, so far, the DMR audio sounds muddy, heavy on the lower frequencies (where usable clarity doesn't happen) and some of the stations clearly have momentary drops if you listen carefully. It's not as impressive as other trunking methods. With only one ham DMR repeater in the area, it's a LONG wait to see activity (or if I programmed it correctly).

I'm looking forward to being able to RR download into Sentinel instead of having to type stuff in (or manually enter, GAH!).

For the RR management folks on here, narcc.org has a list of frequencies and modes for ham radio in NorCal that is reasonably current and should be considered for collecting data. Unfortunately, it's again manual, not exported in a useful format.

Muting the tones while in scan mode (not Fire Tone Out) when they are set off would be something I'd be interested in. When the fire pagers in my town were added there was some concern about malicious attempts to set the pagers off using amateur portable radios that were easily modified to xmit out of band. So the tones were set to 8 seconds in duration. I'd like to mute them as I have no need to hear the audible tone portion, it's intent being to grab your attention.

They have added something new however, which may make the pagers obsolete... The use of personal cell phones getting dispatch text messages. What's nice about using a cell phone is the added ability to notify dispatch they are responding using a single "canned"reply message, activated by a one push send button. Monitors at the fire stations would show those just arriving to respond to the call, who else was on their way, the engine now waiting for that extra man to fill out the assignment when before, if that extra man was just around the corner, but out of sight, the engine might have left without waiting for him.

Unless the tones are set on a different PL, there's no way (that I can think of) to mute them.

And I don't get it - how does making the tones longer make it harder for someone with malicious intent to 'hack'?

Wow, sounds like some real paranoid people there. I have heard of a lot of silly things before but hacking fire tones isn't one of them. If you people are concerned about that you have more problems that need solved, and lengthening the tones won't fix those issues.

If you're scanning, there is a good chance you will miss the tones - making the feature useless. That's why the FTO is a dedicated mode.

As for the 8-second Group tone, it's actually easier to replicate a single tone than a dual-tone. There are very simple means that make any replication a simple task anyway, but the 8-second tone only serves to increase the chance of falses and delay dispatch since it takes twice as long to set off the pagers.

It's far more likely the department is using Group tones for the departments because they have officer or non-emergency tones that are two-tone so they can set off pagers as smaller groups or as the entire station.

Yes I did Paul but am still somewhat confused. Let me try to be more explicit what is confusing me. First of all the radio is copying digital fine in custom scan. I am trying to manually enter a Connect Plus system using Sentinel. I have the frequencies , CC, talk groups and slot numbers for the system.(also have the LCN Numbers) When I begin the Sentinel program after entering the system, (Mototurbo) the department, channels I see no where to enter the frequencies for the system. Where am I going wrong?

Thanks in advance for all your help and patience

People do strange things. I work in an ems comm center. I started working there in the 80s units used modat for status updates. Someone taped them and had a mobile on the frequency and would play the tones back during the midnight changing the trucks status assignments creating all type of confusion. Other time they would play them on a 2nd frequency that was turned up loud and when the dispatcher was keyed the modat tone was in the background and it stacked the tones for his unkey.
All sad but true.
Howie

The frequencies are entered in the Site tab. Also, you are using the
latest Sentinel, right? That's the one included in the zip file.

"Wow, sounds like some real paranoid people
there."

That's what they said about the lady FBI Agent who reported to her superiors what a flight instructor told her about a couple of his "students" who asked about taking an abbreviated pilot course without takeoff and landing instructions, that only taught how to fly an airliner once at cruising altitude! When she would not stop pushing it they told her she was just being paranoid and to "Shut up".. The rest is, well you know, as they say... History? It's all paranoia until it happens... Then it's Oh Crap!

But yea, you are correct. I suspect it was a veiled attempt on the consultant's part to let me know my interference wasn't appreciated, me being a ham, and the one who championed the idea of a VHF High Band Repeater. The town hired the only radio guy they ever dealt with on a regular basis (of all people) as our consultant. He was the former owner of the install/ repair facility called Huntress Electronics. It was affiliated with the Rocky Hill, Ct. Motorola Sales Dept! And his heart and wallet were favoring Motorola. I swear Motorola was also contracting him to look after their interest, but I could never prove it. Motorola was pushing a multi-million dollar trunked 800MHz system and I shot it down. Don't get me wrong, I like Motorola products. It's just that the sales staff wasn't fully truthful when we first asked for a VHF High Band Repeater System which they said was not possible due to a lack of an available frequency pair. Nothing against Motorola however... They ain't in business to loose money. It was the town's fault for not hiring an INDEPENDANT consultant to look after our interests. I simply did two things... first, I thanked Motorola, said no sale, but we will let you know what we decide, and two, hired an independent consultant and told him to let Motorola know what we decided. And, like you, not once have I ever heard of someone attempting to hack tone coded squelch. Interfering with PS traffic yes, but not tone activation.

On Jul 23, 2016, at 2:33 PM, John johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Wow, sounds like some real paranoid people there. I have heard of a lot of silly things before but hacking fire tones isn't one of them. If you people are concerned about that you have more problems that need solved, and lengthening the tones won't fix those issues.

And I don't get it - how does making the tones longer make it harder for someone with malicious intent to 'hack'?

On Sat, Jul 23, 2016 at 9:23 AM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Muting the tones while in scan mode (not Fire Tone Out) when they are set off would be something I'd be interested in. When the fire pagers in my town were added there was some concern about malicious attempts to set the pagers off using amateur portable radios that were easily modified to xmit out of band. So the tones were set to 8 seconds in duration. I'd like to mute them as I have no need to hear the audible tone portion, it's intent being to grab your attention.

They have added something new however, which may make the pagers obsolete... The use of personal cell phones getting dispatch text messages. What's nice about using a cell phone is the added ability to notify dispatch they are responding using a single "canned"reply message, activated by a one push send button. Monitors at the fire stations would show those just arriving to respond to the call, who else was on their way, the engine now waiting for that extra man to fill out the assignment when before, if that extra man was just around the corner, but out of sight, the engine might have left without waiting for him.

The 8 second tone was sold on the supposed merit of being able to eliminate other unauthorized people from activating the pagers. I knew it was bogus when I heard it and recommended adherence to normal parameters and was advised against pushing it, my objection having been noted.

You can certainly verify you suspicions by looking at their system. The tone frequencies are listed in the Wiki.
The system is Farmington, Town of, Ct., Hartford County. It's a pay-per-call type of volunteer organization consisting of 3 Companies augmented with 9 plus full time staffers during the week, a state paramedic squad and state hospital FD (John Dempsey Hospital).

On Jul 23, 2016, at 3:24 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

If you're scanning, there is a good chance you will miss the tones -
making the feature useless. That's why the FTO is a dedicated mode.

As for the 8-second Group tone, it's actually easier to replicate a
single tone than a dual-tone. There are very simple means that make any
replication a simple task anyway, but the 8-second tone only serves to
increase the chance of falses and delay dispatch since it takes twice as
long to set off the pagers.

It's far more likely the department is using Group tones for the
departments because they have officer or non-emergency tones that are
two-tone so they can set off pagers as smaller groups or as the entire
station.

Make sure the Service Type is enabled that you programmed. It defaults to Custom 1. Also make sure any assigned Quick Keys are enabled. I recommend starting without Quick Keys until you get everything receiving first.

I've run into a new setting that I don't understand.

"Add Current dB Channels"

Pressing E bring up a confirmation screen.

Pressing E again sveast channels to the system, but I have no idea what
is being saved.

I've never seen this option before, but it's not limited to DMR systems.

Thanks.

Scan the channels. All that is what would be
added to your FL if you "Add Current dB Channels".

Rick WA6NHC,

You wrote;
"And here is where your search begins..."

In reply to my;
It's a pay-per-call type of volunteer organization

Not sure your meaning but guess you refer to the makeup of the FD as a volunteer organization... And as such, there was no organizational skill, specifically relating to comms system? Or, are you keying on the "pay-per-call" status? I put that in as a way of defining the specific type of volunteer FD. Other VFD's do not get paid per se, instead, incentives are offered in the form of property tax breaks, insurance coverage, etc. People often split hairs over the term strictly "volunteering" which means no compensation of any kind.

If "Volunteer" is your meaning, you are correct! BOY, are you correct! There was absolutely no FD involvement other than making a call to the POC, read further; The only thing the town had that remotely concerned itself with the Town's radio communications needs was a Captain in the Police Department they saddled with keeping an eye on things, a "point of contact" (POC) for needed repairs to the town's two VHF Low Band simplex systems, Fire & Police. That Captain knew absolutely nothing when it came to radio comms. A fact he freely admitted to me and anyone who might ask. His radio responsibilities started and ended with making a phone call to the repair vendor when something went wrong. But, he WAS the POC so everything "radio" got dumped in his lap. Of course, that changed after my involvement. (I'm not patting myself on the back here-anyone who had knowledge of the situation at hand could have interviened. But since it was not widely known outside the FD & PD, and few if any but myself could intelligently speak to it, if I didn't interviene, it was wholly dependant upon reaching the bidding process before opposing views were introduced.

On a side note, Jeof, th PD Captain, showed me a Motorola low band mobile radio he was using as a foot rest under his desk with a serial number of #*001! He was pretty proud of that radio, asking me if I had any idea what it might be worth (the first radio manufactured in that model). I referred him to Motorola, who might have a company museum interested in acquiring it. It's worth, and it's whereabouts now,I have no idea.

On Jul 19, 2016, at 1:11 PM, rhyolite@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Indeed; The FCC did at one time require public safety to relinquish VHF and UHF spectrum to qualify for NPSPAC 800 MHz frequencies. In addition, some years later, all Part 90 licensees were required to audit their licenses to determine if any frequencies were unused and to certify that construction was completed on remaining frequencies. That being said, in some areas, fire departments desired to stay on VHF or UHF conventional frequencies while their police and public works constructed 800 MHz conventional. So there were waivers and hold outs. Some technology such as paging and fire station alerting did not conform to trunking technology, so these frequencies were often retained.

And yes a lot of the FCC decisions, while driven by industry (M) were forward looking.

I am sure someone on the thread will expand on the time frame of these actions.

In no way would I ever disparage volunteer FF. Once upon a time, I was one. Then I went into it for a full time paid career and spent another 32 years at it.

What I was referring to was unfortunately, on a pay per call department (one of my volunteer departments ran that way) it is/was possible that one (or more) of the members saw that as an opportunity to enhance their income by faking tone outs. Being mere humans, that and worse happens in any field.

That POC wasn't progressive at all, shameful because that is one of the attributes that really helps everyone, instead of being a mere babysitter.

Volunteer means just that, volunteer. For 12 years I volunteered on three different departments and never got a penny nor any tax breaks or anything else. If you get anything at all then the volunteer part has to be dropped because you are then paid. I had to drive to the scene most of the time and I had to pay for my own gear, safety lights, all of it. Nothing was given to us.
Some even bought their own portables for comms.
We even had to pay out own training.

I used to have a T-shirt "Volunteer Fire Fighters are unpaid Professional's"

Ok. I see where you're coming from now. I also spent 38 years in the Fire Service before getting out of the way (if you don't you get run over) and moving on. Both in the vols and paid depts.

Anyone caught enhancing their position or status in life at the expense of others... and jeopardize their safety in the process, must pay a higher price for their crime. Setting off tones simply to get a couple extra bucks for a false alarm and getting someone hurt or worse while responding to a false alarm is a terrible crime. But when the perpetrator is a fellow Firefighter... He better hope the cops get to him before someone else does. The safest place he can be is a jail cell!

> Not sure your meaning but guess you refer to the makeup of the FD as a volunteer organization... And as such, there was no organizational skill, specifically relating to comms system? Or, are you keying on the "pay-per-call" status? I put that in as a way of defining the specific type of volunteer FD. Other VFD's do not get paid per se, instead, incentives are offered in the form of property tax breaks, insurance coverage, etc. People often split hairs over the term strictly "volunteering" which means no compensation of any kind.
>
> If "Volunteer" is your meaning, you are correct! BOY, are you correct! There was absolutely no FD involvement other than making a call to the POC, read further; The only

thing the town had that remotely concerned itself with the Town's radio communications needs was a Captain in the Police Department they saddled with keeping an eye on things, a "point of contact" (POC) for needed repairs to the town's two VHF Low Band simplex systems, Fire & Police. That Captain knew absolutely nothing when it came to radio comms. A fact he freely admitted to me and anyone who might ask. His radio responsibilities started and ended with making a phone call to the repair vendor when something went wrong. But, he WAS the POC so everything "radio" got dumped in his lap. Of course, that changed after my involvement. (I'm not patting myself on the back here-anyone who had knowledge of the situation at hand could have interviened. But since it was not widely known outside the FD & PD, and few if any but myself could intelligently speak to it, if I didn't interviene, it was wholly dependant upon reaching the bidding process before opposing views were introduced.
>
> On a side note, Jeof, th PD Captain, showed me a Motorola low band mobile radio he was using as a foot rest under his desk with a serial number of #*001! He was pretty proud of that radio, asking me if I had any idea what it might be worth (the first radio manufactured in that model). I referred him to Motorola, who might have a company museum interested in acquiring it. It's worth, and it's whereabouts now,I have no idea.

That's what I was referring to. You feel strongly about the definition as I do. With me, it is to a point where I felt the need to point out the difference. As a way to recognize those of us who are or were vols in the strictest sense. I served during a transition period where increased social activities reduced interest in the VFD's and watched the waiting list for membership shrink then disappear. Today, all kinds of incentives are offered as an accepted necessity just to fill out the rolls. I guess volunteering ain't what it used to be...

On Jul 24, 2016, at 4:55 PM, John johnstark@earthlink.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Volunteer means just that, volunteer. For 12 years I volunteered on three different departments and never got a penny nor any tax breaks or anything else. If you get anything at all then the volunteer part has to be dropped because you are then paid. I had to drive to the scene most of the time and I had to pay for my own gear, safety lights, all of it. Nothing was given to us.
Some even bought their own portables for comms.
We even had to pay out own training.

I used to have a T-shirt "Volunteer Fire Fighters are unpaid Professional's"

Sent from my Verizon Wireless 4G LTE DROID

What the heck does this have to do with the DMR release? Could you please stay on topic or else start a new one of your own so that we can follow just the discussion that is critical to us?
Thanks!

  Ok. I see where you're coming from now. I also spent 38 years in the Fire Service before getting out of the way (if you don't you get run over) and moving on. Both in the vols and paid depts.
Anyone caught enhancing their position or status in life at the expense of others... and jeopardize their safety in the process, must pay a higher price for their crime. Setting off tones simply to get a couple extra bucks for a false alarm and getting someone hurt or worse while responding to a false alarm is a terrible crime. But when the perpetrator is a fellow Firefighter... He better hope the cops get to him before someone else does. The safest place he can be is a jail cell!

I once had a Captain that put it in a nutshell after a theft in the
firehouse.

"If *I* catch him before the cops, order an ambulance. And by the time
it arrives, I'll @#*(@# guarantee he'll need it."

And I believed him.

OK, so I created a new system. Let it track for a few minutes. Then upload the scanner to Sentinel and the bandplan showed up in its tab.

Here's my setup at the moment:

BCD436HP, firmware 1.11.15
Sentinel 1.07, Rev 3
System: VHF P25 Trunked

(I know this is the BCD536HP list but who knows, that could be the factor.)

3793. DMR Update Public Release

Yahoo group: BCD536HP
Date: 2016-07-27 18:05:14 UTC
From: Uniden UPMan
Topic: 3793 Message: 3793

I've moved the DMR Update firmware into public release. This means you can use the standard method for updating the firmware (using Sentinel).
The web pages reflect new pricing, but our IT guy has some other things on his plate, so it might take a day for the purchase process to reflect the increased price. So...really, really last chance to get in on DMR for $50.
 UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

3796. 536HP Problem

Yahoo group: BCD536HP
Date: 2016-07-28 17:21:24 UTC
From: Jim Stein
Topic: 3796 Message: 3796

I have a problem with my 536HP that exceeds my limited technical skills - so am looking for any suggested solutions.
I was away from home for several months. When I returned my 536 was scanning normally. Then a couple of weeks ago I ran the Sentinel Update Firmware and Update Database programs, just for normal maintenance. Immediately thereafter the 536 no longer received any of my P25 trunked frequencies though it continues to do conventional frequencies normally.
Unfortunately for me, 99% of my scanning is on Minnesota's Amer P25 system so I am hearing basically nothing. I am running the same program written last December with no changes.
Have also swapped out the SD card in case that was the issue. The 536 does have the clock issue (which I will be getting fixed soon) but that has been there for a long time. Other than the Update and trying a different SD, I have made no changes.
Any guideance would be really appreciated!

Most likely Service type was turned on through the scanner and in Sentinel nothing checked so you aren't scanning anything after rewriting the scanner

Good idea Michael - thanks. I did a check and all applicable Service Types are set to On both in Sentinel and the 546 so it doesn't look like this is the answer.

3799. BCD536 Clock Repair

Yahoo group: BCD536HP
Date: 2016-07-28 22:53:04 UTC
From: w9ql@...
Topic: 3799 Message: 3799

I was very happy that my 536 clock repair was completed in 13 days, door to door. I waited for the initial crunch to thin out before sending my unit back in, hoping that would keep the turn-around time to a minimum. I did have one issue that I will share: when I went to re-install the micro-SD card, I heard a "snap"rather than the click normally heard when the card is seated properly. When I looked at the front of the SD card opening, I found that the two metal edges of the socket were pressed together, preventing the card from going into the socket. So, the card went in on top of the socket assembly and was damaged. It took over an hour to remove it and it was damaged beyond repair. I purchased a replacement card and (gently) re-opened the socket opening so the card could be inserted properly. The good news is I'm back up and running. Not sure what may have happened during repair and whether anyone else has experienced this issue, but I thought I'd share my experience and suggest you look inside the card opening to make sure it is OK, before reinserting the micro SD card.

3800. Custom 1 will not check,with Sentinel software or different PC's.

Yahoo group: BCD536HP
Date: 2016-07-28 17:23:55 UTC
From: queenhorserider@...
Topic: 3800 Message: 3800

Why won't Custom 1 turn on,on my BCD536HP when I set it to turn on using Sentinel software? I tried using Windows 7 and Windows 8,2 different computers? I set my Service types,that works OK when sending it to the scanner,but I tried setting all of the Customs with the check mark,or just one check mark on Custom 1,and when I check my SER on the scanner,it is not checked.I have sent the scanner into Uniden 2 times and they tell me it is working fine on their systems in Texas.
Is anyone having this issue with the Custom 1 being sent to the scanner after being checked,from the PC,to the scanner.I am told this must be checked in order to pick up certain service types.I believe this is one of the reasons I am having issues with picking up my local area service types.
Could it be the Sentinel software,tried removing and reinstalling several times with no change,updating the driver,different computers.Any help or ideas will be deeply appreciated,as Uniden tells me there is nothing wrong with the scanner.Thank you very much,,,,Mark

Topic: 3800 Message: 3801

Custom1 (or any other custom number) won't turn on unless the database you have selected contains data with a service type of custom1.

Typically, you create a favorites list with frequencies and trunked systems you wish to monitor. If copied from the main database they will all have predefined service types already. When you add to it or enter your own frequencies and other information the default service type will be custom1. Once that favorites list is saved, the service type custom1 will be available if that favorites list is selected on the scanner - otherwise, it will be greyed out.

Are you checking Custom 1 in your Sentinel *profile*? When rewriting favorites to the scanner, the profile determines what service types are on and off in the beginning.

Gary, how's life in the retirement zone? Doing anything exciting? Got some questions if you don't mind answering.
1) link to the DMR upgrade?2) How well does it work? 3) What's you opinion of the 436/536 radios? 4) The Whistler 1095?
I've got a 396XT that I use nearly everyday because it out-receives the 436. I have a 536 but it suffers from the same problem all the scanners I have tried so far, It hates mush zones. Naturally we live in one...
Been keeping busy out here. Still messing with cellular. Cricket, the company I was working for was bought by AT&T. Doesn't seem possible that I've been doing cellular for nearly Nine years. Time to get back into LMR.
Take care,
Bill in Bubbaville

Mark, I have the same situation. I have a Favorites List I've named Federal. In the FL I have various federal parks/agencies. I made sure that the service type "Federal" was used for each agency. I have all service types selected in my profile. When I go into the service types on my 436 Federal is not selected. There's nothing I can do to select it (Function Zip/Services will not allow me to change it). Any help would be very appreciated. John

Nice to hear from you, Bill.
Retirement is good. I'm doing some EMS QA work which entails audits of patient care reports. It also involves in some instances going out to client agencies to talk with individual medics. I've learned quite a bit out how the various fire departments work!

I've had good experiences with the DMR upgrade so far. It's now in production, so the upgrade can be done through the Sentinel software.

http://info.uniden.com/twiki/bin/view/UnidenMan4/DigitalMobileRadioUpgrade has the information on the DMR upgrade.

I'm happy with the x36HP scanners except for the 536HP display. It's just not bright enough for my old eyeballs. Hopefully when Siren comes out, I'll be able to use that.

I never used one of the Whistler 1095s. The closest I came was a loaner PSR800 that I had a few years ago. Not a bad scanner, but the EZScan software takes a while to figure out. That being said, I think Sentinel is worse.

There is a thread at Radioreference on the UHF reception issue with the 436. The solution is to put copper foil on the inside of the battery door. No one is quite sure (yet) what the problem is, but it seems to have to do with the batteries. The foil sits on top of the batteries and the noise is reduced and reception improved. I did it and it seems to help.

LTR seems to have changed, at least around here. While there is still some use of UHF and VHF, a lot of companies have moved to the ICE 900Mhz MotoTrbo system. That includes a lot of private ambulance services.

No public safety DMR around here, but a good amount of Public Works Departments have moved when the narrowbanding mandate took effect.

Gary

Also make sure that those agencies are within your set range. If not, they will not load meaning the same as if you did not have any Federal systems in that FL.

It won't pick up DMR in CC unfortunately. You'll need a standard frequency counter - I picked up https://smile.amazon.com/gp/product/B01D86RR0S/ref=oh_aui_detailpage_o08_s00?ie=UTF8&psc=1 and it works great.

Were you trying simplex DMR or DMR on a repeater input? If so, those are not constant-carrier modes and will not trigger a CC hit unless there are users above the threshold on each timeslot. Then it will trigger a hit.

Repeater outputs will trigger CC hit since those do have a constant carrier. Even when transmitting only one timeslot, they send timing info in case another user keys up.

Ok, so technically you'll pick up DMR if you're close to the repeater, right? But I think when most people ask about CC, they're wanting to pick up the input from say a handheld or mobile.

That's an assumption I would not make. But, my reply quoted below covers all possibilities. And yes, repeated transmitters include trunking systems (I didn't specifically state that below - I'll include it now for completeness).

Close enough to a repeater (or trunk system) will hit (including control channels although constant control channels could block a voice channel hit - same applies to any trunking using a constant control channel).

Close enough to two users on simplex or an input will hit as long as both are above the hit threshold (18 dB above any other signal or the noise floor).

What will not hit is:
Hearing only one slot user on simplex or a repeater input - no matter how strong they are. Reason being they are not constant transmissions.

Some frequency counters will work. Some will show
only half the frequency if they average the frequency.
It depends on how large of a sample they take.

Shame it can't. I picked up that $40 frequency counter and can pick up my DMR HT keying a repeater or simplex.

I thought I read a comment from UPMan that Cloce Call will not work on DMR, but I could be wrong. It would seem that if it was a long enough simplex transmission, CC should pick it up.

That would be very helpful in tracking down an elusive user that I suspect is on a 900 DMR trunk system.

I'm sure he will correct me if I'm wrong, but I'm 99% sure I'm right. CC operation has been the same since the units were released. In the past you would simply get digital data on DMR hits. Now you will decode them provided you have the upgrade.

Now, I don't know how the scanner would react to a hit of two active slots above the CC threshold on simplex or an input. I assume it would decode slot 1.

It won't pick up DMR in CC unfortunately. You'll need a standard frequency counter - I picked up
https://smile.amazon.com/gp/product/B01D86RR0S/ref=oh_aui_detailpage_o08_s00?ie=UTF8&psc=1
and it works great.

3821. Frequency Issue

Yahoo group: BCD536HP
Date: 2016-08-01 02:58:11 UTC
From: Tim Ferguson
Topic: 3821 Message: 3821

I have an issue that developed this week when our local fire protection district decided to move back to their old frequency of 154.430. No problem on my older scanners, but on my 536 (and probably the 436) no reception even though 430 is programmed because the FD's in the county immediately south of us (Jefferson) still are on 430 and come in fine.

Any ideas? They have moved back to the old frequency because of serious overlapping a couple of weeks ago during a storm when other FD's in Marion County were also out.

Tim

Was that the output?

Also keep in mind - once you get a close call hit, you're 'monitoring' it.
You could travel for miles and still 'have' it.

Check that all relevant Quick Keys are active, that all
Service Types are enabled, and that all AVOIDs are unAVOIDed.

Might also want to check that location control
is not enabled or that if enabled it is accurate.

Yes of course. I would not have heard every call district on the input. Close call DND would have dropped it if the delay was not set for long enough. I held it by transferring the hit to Quick call group.

That was the Southborough, MA DMR-MARC MotoTRBO repeater. It's on a big tower about a mile north of the Mass Pike at Rt. 9 and I-495. It's also a high-power repeater in the 200-250 watt range from what I hear. 145.270 is the repeater output so Close Call would hear it since by default both timeslots always transmit when one or the other is in use.

Bob,I think I understand what you are saying. I load my favorites,set the FL Quick key and FL number tags,and location control to off. Set the range to 00.0,check mark the Service Types,and check mark the Custom 1,using Sentinel. I was told or trying to understand if Custom 1 is not checked,I will not get any receive from any of the systems Systems Checked? I do receive a few things,but nothing I have programmed from Centinel,some off the wall things,but no local police or fire. Actually the P25 Alpha Tagged Systems that are marked with the T,the TDMA Capable Talk Groups,I cannot pick up any of those Alpha Tag Groups at all.I can get the Motorola and Conventional to receive,but the Countywide TDMA mode is no where to be heard.But I believe I was told that Custom 1 needs to be checked to receive these Modes.
When I go to Read Scanner with Centinel,it shows the Custom 1 checked,but when checking the SER on the scanner,it is not checked,but Sentinel shows it is checked upon reading the scanner.I am lost,been messing with this scanner for 4 months now,and till not getting my local area police and fire,I can get a local police town,but they are still conventional,that's all I can get,some State Police that are still conventional,but nothing that is TDMA Mode receivable.
I guess I will still keep doing different settings and pushing buttons until i get something to work,Uniden told me this was functioning normally with their local P25 Systems and was OK.Thanks for the reply,any help I appreciate and will try.I don't thing the DMR download would make a difference,most of those Talk groups are in or near Chicago.Thank you,will keep trying.Have a great day..

If Custom 1 is not checked in the scanner, it means those systems/channels are not selected for scanning. If you are using location control, check to make sure the location is set correctly.

Also make sure any Quick Keys assigned are enabled. I usually recommend for new users not to assign any Quick Keys until you get a hang of how the scanner works otherwise. The nested Quick Keys can be confusing to some. For example, if the System Quick Key is not enabled, you can enable or disable the Department Quick Keys and they won't make any difference. Same with the Sites.

Make sure you go and write it to scanner. Just saving the favorite list in Sentinel is not enough.
I have made a similar mistake when I first got my536. I hope that is what does the trick for you.

Mark, I have the same situation. I have a Favorites List I've named Federal. In the FL I have various federal parks/agencies. I made sure that the service type "Federal" was used for each agency. I have all service types selected in my profile. When I go into the service types on my 436 Federal is not selected. There's nothing I can do to select it (Function Zip/Services will not allow me to change it). Any help would be very appreciated.John

It won't pick up DMR in CC unfortunately. You'll need a standard frequency counter - I picked up https://smile.amazon.com/gp/product/B01D86RR0S/ref=oh_aui_detailpage_o08_s00?ie=UTF8&psc=1 and it works great.

Not connected to anything. That's the odd part. I think
it's capacitively changing the frequency of the noise.

I did notice in the DB at RR, Jefferson FPD's modulation is set for "BM" and Centralia FPD's is set "RM". Can't find "RM" as a setting in the Sentinel software so set it to "Auto" for now.

What is the difference, and does it matter?

Thanks,

Tim

You're not looking at the modulation column. You are looking at the use column. BM = Base and Mobile. RM = Repeated and Mobile. That's not relevant to Sentinel.

You want the column near the far right. I think it's next to the last one that has the modulation.

3836. BCD426HP noise

Yahoo group: BCD536HP
Date: 2016-08-04 05:21:02 UTC
From: Rick WA6NHC
Topic: 3714 Message: 3836

Hi Joe,

If the noise is the same on USB (only) or with battery power (only) and the foil reduces it in both cases, then something in the radio is likely radiating (causing the noise). Adding the foil to the rear of the radio, not attached to anything and have it affect anything means it adds inductance or capacitance (or both) but one would surmise that it would reflect more back into the receiver... I've not taken mine apart (no reason) so it could be something as benign as the keypad needing a bit more capacitance or shielding. One tender spot on most portables is the antenna connection to the rx board, something worth checking.

If it IS only on USB power, I'd suspect the noise being on the power cable (either wall wart or computer power source, rarely perfect). For critical work, that means making up a battery based USB supply (5v at one amp... not hard to make - 2 or 3 cells of lithium depending on chemistry, a resistor and zener, close enough). OR buffering the power source with a LARGE cap (brute force to maintain voltage smoothly) and a few small ones to bypass RF. It's not super critical to me, signals are pretty loud most of the time.

When mine gets back from the recall, I'll test it. (It arrived in TX last Friday, was accepted into repair today but the web page and link don't match up to the email notice so I have no idea beyond that. It's in the system and at least I'm told something, unlike other companies (Kenwood, Icom) where it's simply in a black hole until you get a surprise package. So it'll get here when it gets here, then I can send one of my 536 in for the same things.)

Very odd though, piques the interest.

3837. Re: [BCD536HP] BCD426HP noise

Yahoo group: BCD536HP
Date: 2016-08-04 06:04:44 UTC
From: MCH
Topic: 3714 Message: 3837

Hi, Rick.

It is on both battery and USB power.

It is suspected that the shielding is either changing the resonance of the noise, or that it is reflecting it back toward the source which is not affecting the receiver circuitry. The source is far removed from the antenna connection point. specifically, it appears to be on the bottom of the unit behind the center cell slightly left of center. It is not the SD card itself, but is lower and to the left of it.

There is a very simple test that requires only removing the battery cover: After the cover is removed, put your finger across the gap between the bottom two cells then tune to a fairly weak signal. Remove your finger and see if the signal gets more noisy or drops below the squelch completely.

Tonight there was a fairly comprehensive test of 6 units. All seemed to exhibit varying degrees of the issue. The worst put out about 30 dB above the noise floor. The best about 10 dB above. The shielding provides about 20 dB of isolation which is enough to eliminate about 90% of the noise and receive many weak signals that were not receivable otherwise.

Tested were the copper foil fix and the aluminum foil fix (these are both tapes). In general, it seems the aluminum was better overall, but on some units the copper was better. It seems in addition to reducing the noise, the peak was shifted in frequency (makes sense given what is believed to be happening - specifically capacitive coupling to the cells).

There is ongoing testing, but even a single layer of either provides a huge improvement. To apply it, cut a piece to the size of the battery cover and apply it OVER the foam. This is important since a flat piece makes the problem worse. It is believed that the foam is creating more coupling to the cells.

The exact source is not known yet, but it is suspected to be the SD card communications circuit.

An interesting side note: The noise is also present on the 396 series and even a Whistler that was tested. But the levels are reduced enough on either that it has little effect.

Two of the units tested (one that had the issue and one that had virtually no noise) were using identical SD cards. Serial Numbers varied but there was no SN or year of manufacture correlation found. Units were tested from 2013 to 2016. The best was made in 2013 but another 2013

unit has the noise issue.

BTW, I CC'ed the 436 list since this issue affects only that model as
far as anyone has reported yet. I would recommend we continue the
discussion on that list. If you can think of anything else to try,
please mention it. I have not mentioned all the tests or all the
findings so as to keep the post less than novel-level.

Hello,Howie,thanks for the reply,how do I go about and write it to the scanner? I only know how to use the Sentinel to write to the scanner.Can you explain this to me on how to write it to the scanner? I will try anything to get this to work,very frustrated not hearing my locals since they change to Phase II,Phase 1 one my other scanner,my BCD996XT,had no problems with that scanner listening with the Phase 1.Any help with how to write to the scanner will be appreciated in advance.Thanks guys,Mark

3840. Re: [BCD536HP] BCD426HP noise

Thanks. I got there, but it blanks out when I enter the info, never provides status. I'm not too worried, they have it, will fix it and I have two here in the meantime (one to be sent when the 436 returns).

Thanks! I find it aggravating that the RR database had the old 154.430 line in it as of Monday for Marion County and for several months to where I could append it to my Favorites lists, but it’s gone today, of course. Fortunately, I had not changed the page on my browser that showed the original listing.

That is how I had added Jefferson County’s FD entry to the Favorites List.

To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] BCD426HP noise

Thanks. I got there, but it blanks out when I enter the info, never provides status. I'm not too worried, they have it, will fix it and I have two here in the meantime (one to be sent when the 436 returns).

Subject: [BCD536HP] BCD426HP noise

Hi Joe,

If the noise is the same on USB (only) or with battery power (only) and the foil reduces it in both cases, then something in the radio is likely radiating (causing the noise). Adding the foil to the rear of the radio, not attached to anything and have it affect anything means it adds inductance or capacitance (or both) but one would surmise that it would reflect more back into the receiver... I've not taken mine apart (no reason) so it could be something as benign as the keypad needing a bit more capacitance or shielding. One tender spot on most portables is the antenna connection to the rx board, something worth checking.

If it IS only on USB power, I'd suspect the noise being on the power cable (either wall wart or computer power source, rarely perfect). For critical work, that means making up a battery based USB supply (5v at one amp... not hard to make - 2 or 3 cells of lithium depending on chemistry, a resistor and zener, close enough). OR buffering the power source with a LARGE cap (brute force to maintain voltage smoothly) and a few small ones to bypass RF. It's not super critical to me, signals are pretty loud most of the time.

When mine gets back from the recall, I'll test it. (It arrived in TX last Friday, was accepted into repair today but the web page and link don't match up to the email notice so

I have no idea beyond that. It's in the system and at least I'm told something, unlike other companies (Kenwood, Icom) where it's simply in a black hole until you get a surprise package. So it'll get here when it gets here, then I can send one of my 536 in for the same things.)

Very odd though, piques the interest.

3843. Ham Radio DMR - NorCal

Yahoo group: BCD536HP
Date: 2016-08-06 16:58:26 UTC
From: Rick WA6NHC
Topic: 3843 Message: 3843

I have created (after a LOT of head scratching, DMR is new to me) a Favorite file that *should* allow folks to listen to all the ham radio DMR in the NorCal area. It can be used as a template for your area. Caveat emptor, don't blame me, I'm new at DMR etc...

I've taken the local frequencies listed on the ham DMR sites AND the NARCC (local Ham frequency coordinator, in theory) along with the more common talk groups in use (world, continental, regional, local). It appears to be working.... and it's a work in progress.

BUT, if the site(s) you're listening to is (are) set for using DYNAMIC channels, you won't hear anything until someone transmits into the site, to tell the controller what talk group(s) to use. There is a 15 minute inactivity timeout timer. As a listener only, you have no control over this. You will hear all the STATUS channels, but that's almost entirely up to the repeater owner to set up.

If you want to use this file, message me (or perhaps I can post it in the Files area). I'll attach the HPE file, but I suspect the email filters will remove it.

Hints:
Use DMR 1 Frequency mode (theses are NOT trunked systems, but ARE networked).
I created two departments; 2 meters and 440 to collect the frequencies (just so the display would tell me what band I was hearing).
LCN is NOT used (whew!).
The CHANNELS (TGID) are set up as a DEPARTMENT (which also sets the TYPE to HAM as well as ID'ing each talk group).
I leave ID search ON, in case something new pops up. If it's in a language I don't speak, avoid takes care of it.

I created another group specifically for the one local repeater I know I can hear, so I can AVOID the scanning of 30+ frequencies (faster to lock and listen). So if you have (like me) only one site available, there's another template.

If someone wants to make corrections, please mention the changes here and why, so we can all learn.

good luck, 73,

Rick wa6nhc

From: queenhorserider@...
Topic: 3800 Message: 3846

Dear Howie,YES I check Custom 1 every time after I do my favorites. After setting my Service list,I check Custom 1 and save the profile when done.Sending the info from the PC to the scanner,it seems all of my Services seem to be what I selected,but the Custom 1 is not checked. I would think the PC should send what I selected to the scanner,but not the Custom 1 is checked. I may go to the store and get a new Mini SD card,Format it and try starting over,as I formatted this card a few times. I have heard of people having bad SD cards,and is it a possibility I may have one? I am goint to try that and see if any difference is my settings.
Conventional works,Motorola seems to work,every so often I see P25 come up in the right side of the scanner,but non of the systems I want to listen to. I may start with a new card,try that,and get back to you unless you can think of anything else I am missing or screwing up. Even using the Zip Code install,I still do not receive any of my local ares systems at all,seems like just junk from Illinois,and I want Indiana to work,but it seems all Illinois working,some P25 Types,but not much from Indiana. Gonna start with a new card,will get back to you all soon,starting with a card,format,then go from there.Thanks to you and all,Mark,going nuts over here,wife is ready to move me outside,Ha Ha Ha,,,,Mark

3849. 536 issues

Yahoo group: BCD536HP
Date: 2016-08-08 21:48:11 UTC
From: Howie Seiden
Topic: 3849 Message: 3849

OK so just happened. I guess I now have the clock issue that I thought I was a lucky 1. After turning the unit on it asks me do I want the temp clock status to hit E otherwise it's blank after loading the databse. I then hit E and have to reprogram the time. The first few times the only difference was in the minutes now it affecting all aspects of the clock including the year.2nd issue I have is when scanning and it hits DMR sites scanner is just sitting on them not moving and no audio. So I will try a databse download to fix that but is this the clock issue everyone else had and if so I guess she will be taking a trip.
Thanks in advance
Howie

No PD Tac, they either use cell phones or encryption. Rent a cops, school buses, wineries are there. I'm not that bored, it's fire season here. EMS is the dark side of the force!

A LONG time ago however (Bearcat 250 era), I was really bored so I listened to ship to shore phone calls (marine band). This was near SF.

After a call to his wife, complaining that he missed her, the food was crap and he was two days out, still near Seattle (?!?!) he made a second phone call through the operator. "Hey baby, we'll be in dock in an hour, come pick me up."

I coulda made some bank on that; he wouldn't complain to the FCC without adding a divorce. :-D

3858. BCD536HP Learning Recommendation

Yahoo group: BCD536HP
Date: 2016-08-04 20:45:09 UTC
From: m_rabasa@...
Topic: 3858 Message: 3858

Does anyone have a suggestion on the best way to learn how to use the BCD536HP scanner? The manual is written by technical people for technical people. It certainly is not user friendly IMHO. I had an old Bearcat 220 that I could program every which way until Tuesday. It was relatively simple. Now, all I can seem to do is enter my zip code and it hardly scans anything worthwhile. I've looked at a few Youtube videos but they are more specific in nature. I'm looking for something overall that explains each of the functions and a general "How to" for dummies. I know I'm not getting my money's worth out of this radio. There's a good radio in there somewhere. I just haven't figured it out. Thanks for the help.

Mike

3859. Re: BCD536 Clock Repair

Yahoo group: BCD536HP

From: jack@...
Topic: 3799 Message: 3859

That doesn't surprise me. Once upon a time Uniden sold rock solid products. Up through the BCD396XT model I really liked all my Uniden radios. I've owned the 536 for 2 years and the 436 for 1.5 years. Both have had buggie firmware from the beginning. The 536 was sold for $100 more than the 436 with Uniden promising to quickly provide the Siren app and decent WiFi connectivity. It should never have been sold without that functionality already available and tested. It was a year later before they actually provided that functionality. The firmware upgrade to add DMR has now made my deaf 436 even deafer on UHF, even analog UHF. And since the DMR upgrade my 436 can no longer run more than a couple of hours on batteries. It was lasting 8 hours or so prior to upgrade, but dropped to less than 2 hours after. My 536 which got the DMR upgrade too just started the clock repair symptoms, and it has a dim backlight now. The 536 issues are likely not related to the DMR upgrade, but neither radio receives DMR that well. Cheap Chinese radios receive DMR way better and at 1/4 or 1/5 the cost of the 536/436. Uniden's quality has tanked, and so has their way of treating their repeat, long time customers. They hide behind fanboys at RadioReference dot com rather than provide their own support site. Uniden will never get any of my money again.

3860. Re: Now OT, was Re: [BCD536HP] Re: 536 issues

Topic: 3849 Message: 3860

Well maybe none today, but you never know. Not everyone lives in your area and there are those services in my area. Each area will be different, of course.

I, for example, have no ProVoice around. But I would not say it's useless because it is extremely valuable for those whose PS users are using that mode.

Try this. It may help with some of the new phrases/terminology, etc.

Easier to Read BCD436HP/BCD536HP
Digital Scanner Manual
New.marksscanners.com

There is also another guide published by Nifty Accessories that could help. On-line, there are Utube Videos and of course, here on this help site. Your frustration is understood but as you become familiar with the newest scanners you get a better understanding of where/what causes all this initial frustration.

There are some that say "What frustration?", never having a problem since the day they slid the scanner out of the box. But they are the exception. What you write could have been what I would have written when I first opened my boxes. The majority of us have purchased a full featured scanner that serves us very well, using the features we are interested in. But only after we all invested some time in attacking a "learning curve" using all or most of the aids I have included here. And the rest of the features are for another day when we can better understand them.

And of course if they had waited until the vendor fixed the WiFi, it would have severely hurt Uniden having that stock sitting in a warehouse doing nothing while the firmware was fixed. Uniden's only fault there was to trust the vendor when they said they would have it fixed before it was released by Uniden. It was nearly a year later. Of course, I'm sure all of your plans to exactly as expected.

Uniden's only solution would have been to sell it without the WiFi, but then it would have been another flame-fest if they did that. On the other hand, Uniden DID provide updates on the situation all the way through that year. And even after the WiFi vendor got them the working firmware, it would have been months longer for the testing.

There is a very easy fix for the "deafness" on the 436s.

There is a free repair campaign for the backlight and clock.

On the batteries, I routinely get 10-12 hours which is perfectly acceptable. And that's using DMR as well.

Uniden has a support site.

As for your buying choice, just be expecting the issues other manufacturers have, too.

Joe, when you send in the 536 for the clock repair do they automatically fix the backlight issue or would one have to send it in for a second time if that issue occurs at a later date? Thanks,

I can't say with absolute certainty, but I believe they fix both at the same time rather than risk a second repair which would be much more expensive (shipping) than the cost of the new LEDs.

Topic: 3799 Message: 3866

As the owner of a "Cheap Chinese" DMR transceiver (TYT380), I experience fabulous battery life. I believe it's because the TDMA radios, by design, are able to show big savings on power consumption. I'm guessing it is related to transmitting AND receiving, maybe it has more to do with how it manages power consumption while transmitting, but considering receive time is traditionally the longer of the two, it's a good bet the DMR radio is also saving power on the receive side also. It wouldn't be too much of a stretch to equate the power savings to the BCD436HP scanner. So the poor power consumption results you experience do not agree with MCH or me. I run DMR in my 436 without ANY noticeable increased power drain-I haven't deliberately run any comparison tests because there was no cause to. I haven't heard about the loss of signal caused by DMR upgrade software but haven't noticed my 436 becoming more deaf-(Joe, you mention there is a quick fix for this... can you direct me to where I can find it just in case I need it later?)
Joe explained the WiFi, my biggest issue with the 536. But as Joe has noted, Uniden worked the problem, taking a lot of flack for it (as they should) and came up with a workaround (almost as originally advertised). Sorry to see you have spent your last penny on Uniden. Whistler is the only other comparably priced reputable scanner manufacturer (if they stay tuned to the old GRE set of standards). Also sorry to see the use of this site used as a gripe site. I doubt that is its purpose, meaning the points you make should have been formatted in a manner less degrading of the reason for this site's existence in the first place. The validity and meaning of each point you made can be discussed calmly and intelligently here. Putting the group on the defensive only causes most of that help to not respond, in the end, hurting you, not getting the solutions you seek. Give the guys a chance to help... That's all most want to do here, enjoy the hobby and help it grow by helping each other.

Bill

And of course if they had waited until the vendor fixed the WiFi, it
would have severely hurt Uniden having that stock sitting in a warehouse
doing nothing while the firmware was fixed. Uniden's only fault there
was to trust the vendor when they said they would have it fixed before
it was released by Uniden. It was nearly a year later. Of course, I'm
sure all of your plans to exactly as expected.

Uniden's only solution would have been to sell it without the WiFi, but
then it would have been another flame-fest if they did that. On the
other hand, Uniden DID provide updates on the situation all the way
through that year. And even after the WiFi vendor got them the working
firmware, it would have been months longer for the testing.

There is a very easy fix for the "deafness" on the 436s.

There is a free repair campaign for the backlight and clock.

On the batteries, I routinely get 10-12 hours which is perfectly
acceptable. And that's using DMR as well.

Uniden has a support site.

As for your buying choice, just be expecting the issues other
manufacturers have, too.

Read the thread on this list titled "BCD426HP noise" (and excuse the
typo - that is the actual thread title). I think it was mixed in with
some other items.
<<https://groups.yahoo.com/neo/groups/BCD536HP/conversations/messages/3836>>

And the discussion continued here (as it was OT on the 536 list):
<<https://groups.yahoo.com/neo/groups/BCD436HP/conversations/topics/6417>>

Also in this thread:
<<https://groups.yahoo.com/neo/groups/BCD436HP/conversations/messages/6314>>

The original threads were started by Rich (not sure of his Yahoo ID).
I believe he was the first to try the shielding.

This is in the threads, but I will add it here only to save some time.
If you remove the battery cover, and place your finger on the gap
between the bottom and middle cell when receiving a noisy signal, and
some of the noise goes away, that is a quick test for the issue.

Some units have the issue and some do not. So far no relationship has
been found to year of manufacture, options used, new/old backlight, or
any other factor. More correctly is to say that some have the issue to
the extent it causes noise on the signals and some units do not have it
to that extent. All units tested had some noise - including the 396
series and even a Whistler model. The difference is that it is usually
not strong enough to cause reception issues.

But the fix is to add shielding (such as copper tape) OVER the foam on
the battery cover on the inside and that reduces the noise by about 20
dB which is enough to nearly eliminate all symptoms in units that have
the issue. This also reduces the Close Call evaluation noise floor by 20
dB which will dramatically increase the number of hits.

If there are other issues with the scanner, write a note and attach it
to the scanner. They will fix them at no additional charge after the
clock modification is done. If you write "display is dim", they will
replace the four LEDs that provide illumination.

Ironically, I sent a unit that didn't have the clock issue in for a non
warranty repair (scroll knob), and they did the clock modification too.

From: Scott Miller
Topic: 3799 Message: 3872

Hi, I tried to post this over on the 436 group but appears it never made it.
I have 3 436's all were upgraded to DMR and were all working fine.
I sent them all in to Uniden for the clock repair issue.
When they returned it appeared the DMR portion was no longer there.
I went back in and upgraded them with the key from before.
2 of them worked fine, however the 3rd unit would not work, kept saying
incorrect code entered.
I tried it 6 times and still no go.
Started looking more closely at the radio, the serial # still shows the
same.
However, the Check Sum # is different from the one I had previously
registered and upgraded.
I suspect that may be why it won't upgrade.
Has anyone heard of this before or have any thoughts on what else to try?

Thanks
Scott

It sounds like they messed up the ESN transfer. Is the ESN the
same as the SN? (minus the 260 in place of the z, of course)

i have been seeing and reading a lot about this dmr thing here and i would like to ask what is all this hype about dmr,what is dmr really supposed to do.are the fire and police going to dmr instead of the usual format for communications.it also seems to me that these new digital systems are getting much to sophisticated that even the fire and police are having trouble figuring out how to use these new systems and wind up using cell phones to communicate with each other and hospitals.the powers that be might claim digital systems are better,but digital systems also can have many dead spots.it just seems the juice is no longer worth the squeezing paying several hundreds of dollars for a radio that everyone is having so much trouble getting and making them function and also having to send them back to the manufacturer for faulty parts that should have been fixed before making them available to the pubic.i have a bcd 996p2 and have been thinking abut selling it and getting a whistler radio,but those are very expensive for a hobby that seems to be going down the tubes.

DMR is one of the digital modes designed for business and industry. It's not designed for public safety although that does not stop some PS users from using it for that.

Have your router assign a specific address based on the MAC address. That means EVERY time it's on the network, it will ALWAYS be the same address.

I do that for all my devices, in the long run it's simpler.

Great idea! We've had several power outages this summer, combined with some Internet modem issues where everything had to be rebooted, that caused the 536 to grab a different IP each time and threw Siren off.

Then the next step if your router allows out, pre-select and assign addresses OUT of the DHCP range but on the same subnet (they'll still get routed). That means ALL your DHCP are 'guests', you can narrow the mumber of DHCP (limit your guests) and it's easier to see if someone doesn't belong there by looking at the IP assigned. Not all routers allow this.

It takes time to set up but the wandering network printer IP on reboot was the trigger point for me. Because I now do this routinely, it also now shows me what a ridiculous amount of 'stuff' I have connected to the LAN/Internet; routinely more than 20 devices and I live alone.

From: N1CHU
Topic: 3884 Message: 3884

Checking the URL below shows a lot of P25 Phase II for frequencies listed to CSP. I'm not sure I am reading it correctly but it looks to me like CSP is getting (at least the paperwork) ready to accommodate new radios when they are scheduled. I believe the RR CSP page is in need of an update?

I would love it if someone more familiar with this to verify or correct my observations.

Would like to eventually create a VPN in to access allow Siren access from anywhere, thus another need for a static IP. I normally start the DHCP range at .101 allowing for .1 to .100 to be used for network devices.

3886. DMR: Am I doing this right?

Yahoo group: BCD536HP
Date: 2016-08-16 04:58:26 UTC
From: Evan Platt
Topic: 3886 Message: 3886

Ok, so unless I'm misreading / misunderstanding....

I have a few new frequencies I want to listen to for DMR. At this point, I'm not sure if they're trunked or not. 4 channels (well 2 + 2 inputs).

I created a system "DMR Channels".
Under that I have "Test PD" - I added it as - what was the wording, single frequency DMR? (Not trunked).

I have the channel name, then I have under frequencies the 4 frequencies, and "Color Code search".
TGID 0. I put ID search = Yes, but when I go to that system / department, I don't see a way to hold on any channel? Am I doing something wrong?

Thanks :)

If they are active, I would start with a simple monitor of the frequency (CHANNEL FREQ CHANNEL) and see what is shown on the display (CON, CAP, or something else).

It's likely conventional which means you programmed it correctly, but I would not bother with the inputs to start with - just the outputs.

If you want to hold channels, program them as conventional channels (not as one-freq).

3888. Re: [BCD536HP] Re: BCD536 Clock Repair

Yahoo group: BCD536HP
Date: 2016-08-16 11:19:37 UTC
From: Bill Nolan
Topic: 3799 Message: 3888

I did the quick finger test across the two lower batteries and can state there is a Definite noticeable difference. In my case, the UHF services I routinely monitor are strong enough, signal strength-wise, where the little noise I do experience wasn't enough to cause concern. But of course, now that I know the difference, it annoys me to the point where I need to get some copper foil! Not because there may be a design flaw, but because there is a cheap "quick fix" available which will correct the perceived design flaw permanently or until Uniden comes up with their official recommendation. (I the radio had come with a copper foul attached as part of the battery cover, we would all believe it was designed that way so I'm happy with the quick fix. Unless Uniden comes up with something the drops the noise floor even lower!

Bill

On Aug 9, 2016, at 11:07 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Read the thread on this list titled "BCD426HP noise" (and excuse the
typo - that is the actual thread title). I think it was mixed in with
some other items.
<<https://groups.yahoo.com/neo/groups/BCD536HP/conversations/messages/3836>>

And the discussion continued here (as it was OT on the 536 list):
<<https://groups.yahoo.com/neo/groups/BCD436HP/conversations/topics/6417>>

Also in this thread:
<<https://groups.yahoo.com/neo/groups/BCD436HP/conversations/messages/6314>>

The original threads were started by Rich (not sure of his Yahoo ID).
I believe he was the first to try the shielding.

This is in the threads, but I will add it here only to save some time.
If you remove the battery cover, and place your finger on the gap
between the bottom and middle cell when receiving a noisy signal, and
some of the noise goes away, that is a quick test for the issue.

Some units have the issue and some do not. So far no relationship has
been found to year of manufacture, options used, new/old backlight, or
any other factor. More correctly is to say that some have the issue to
the extent it causes noise on the signals and some units do not have it
to that extent. All units tested had some noise - including the 396
series and even a Whistler model. The difference is that it is usually
not strong enough to cause reception issues.

But the fix is to add shielding (such as copper tape) OVER the foam on
the battery cover on the inside and that reduces the noise by about 20
dB which is enough to nearly eliminate all symptoms in units that have
the issue. This also reduces the Close Call evaluation noise floor by 20
dB which will dramatically increase the number of hits.

3898. Friday Firmware Fun

Yahoo group: BCD536HP
Date: 2016-08-19 15:07:26 UTC
From: Uniden UPMan
Topic: 3898 Message: 3898

Well, a surprise present from the engineers. V1.11.17:

1. Stabilization of the data decoding in all trunking DMR
2. Fixed minor issues

We hope that this also resolves the bogus TGID issue.

http://info.uniden.com/twiki/pub/PartnerWeb/BCD536HPBeta/BCDx36HP_V1_11_17.zip

If you know how to manually update firmware and want to try it out, do so using the above. If you do not know how to do a manual firmware update, I recommend you wait until it is officially released. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

From: Evan Platt
Topic: 3899 Message: 3899

So I often leave my x36 connected in serial mode.. Is it possible to reprogram it while it's in Serial mode? I often leave my x36 connected via serial, and would love to not have to power off , connect, upload, power off, etc...

Thanks :)

3900. manual update firmware

Date: 2016-08-21 15:47:23 UTC
From: lorinengler@...
Topic: 3900 Message: 3900

Is there a step by step procedure on how to manual update the BCD536HP? I got the new firmware but I cannot for the life of me figure out how to manual update the firmware. I did click on firmware update in sentinel and it says I am up to date, but I know I am not since Upman just posted the new firmware update.
I have firmware 1.11.17.bin but I cannot get it to the scanner?

Thanks

You need to connect to your scanner in Mass Storage mode, then copy the BIN file to the SD Card of your scanner in the BCDX36HP\FIRMWARE folder on the SD card. Then reboot the scanner with no USB connected and you should see "Please wait updating firmware."

Doesn't matter if USB cable is attached when restarting the scanner. Just select serial when asked. I do it that way all the time.

From: Gary Saffer
Topic: 3900 Message: 3904

Download the ZIP file.
Unzip it on your computer.
Copy the 1.11.17.bin file from your computer to the Firmware directory
on the 536HP SD card.
Unplug the USB cable from the scanner. The scanner will update the
firmware from there.

It's really that simple.

I get 99% of my own messages. It is all dependent on your ISP, not Yahoo. However on occasion I don't get them and they could appear days, weeks or months later.
The biggest issue I have is getting some people's messages and only part of a conversation, and that's aggravating!

3917. Re: Sentinel question

Yahoo group: BCD536HP
Date: 2016-08-27 22:41:12 UTC
From: Scott Miller
Topic: 3917 Message: 3917

Hello, I have just a basic question about the Sentinel software. I have used Arc programs as well as Freescan for several other types of scanners.

I have been programming my 436 & 536 by hand. Now that DMR is set up on sentinel I uploaded my radios. It appears all of the data is getting loaded into one big group/program. I am seeing all of each radios contents in the same screen. In the above programs I had a separate program for each radio and could put in specific info into that program for that radio. It does not appear it is set up this way in sentinel. If this is the case, do you put all the info in to the one group and then somehow choose which scanner you want to load which data in to? Just trying to get a handle on how this program works, and how I can manage all of the data properly.
Thanks for any help.
Scott

3918. Does the x36 not handle DMR Simplex in search mode?

Yahoo group: BCD536HP
Date: 2016-08-30 03:05:25 UTC
From: Evan Platt
Topic: 3918 Message: 3918

So I programmed up my CS750 with a commercial repeater (although frequency shouldn't matter...) . I also configured a talk around switch on the 750. Put the 536 in search mode on that frequency. Nothing is decoded. No display change, etc.

It IS working - if I run DSD+ on the 536, DSD+ decodes the data and broadcasts the audio. But the 536 doesn't.

Am I doing something wrong? Can't recall if this worked on a previous firmware but I want to say I did it before and it did work...

Not sure what you mean? I'm in Quick Search. Did something change? I used to be able to simply go to quick search, and even just do a scan and it would find DMR traffic and decode it. I'm now in quick search mode and simply holding on the frequency I'm transmitting simplex on...

3921. New owner of BCD536HP scanner

Yahoo group: BCD536HP
Date: 2016-08-31 17:57:41 UTC
From: jg1067@...
Topic: 3921 Message: 3921

I have had my trusty BC-246T portable scanner since 2004 and after 12 years I have decided it was time to purchase a digital scanner since many local area law enforcement agencies have made the transition to digital. I thought the transition to the BCD536HP flagship scanner would be daunting, but within 5-6 hours of opening the box up, I have pretty much got it all down and the scanner working as I like. I love the Wi-Fi dongle capability, the recording capabilities and the scanning speed! Great work, Uniden!

I just have two questions:

I have a larger city about 15 miles away that is using P25 Phase-II for their their communications. I listen to the police "system" on their P25 site. Sometimes, the transmissions are clear or relatively clear and other times it sounds muffled or cuts out during the transmission. I read how to view the P25 error rate and sometimes it's as high as 70-75 before it cuts out the transmission, other times it's pretty low -- error rate around 6-7 and sounds pretty good. Are there any tips for adjusting the P25 settings so I can get a little more consistency while listening to this site?

I think the stock indoor antenna that comes with the BCD536HP scanner does a pretty good job overall for what I listen to, but is there an antenna that might be a bit better than the stock antenna? I was thinking maybe that might help with the high P25 error rates I sometimes see? I don't want to run coax for an outdoor antenna or want a huge, unwieldy indoor antenna -- I didn't know if a similar sized indoor antenna similar to the stock antenna might exist (a bit taller would be OK) that might be optimized for these P25 sites.

Thanks in advance for any responses.

Jim

For a phase-II system 15 miles away, you really need a directional outdoor antenna pointed at the system. Any outdoor antenna will be an improvement of course.

With Priority?

If so, how did you set the priority channel?

AFAIK, you need a FL in order to define a priority channel.

Only if you copy it. Otherwise it's the opposite of a FL.

3931. Editing the Radio Reference database file

Yahoo group: BCD536HP
Date: 2016-09-10 17:51:50 UTC
From: Bill
Topic: 3931 Message: 3931

Forgive the dumb question, but I have a problem. The RR database that I uploaded to both my 436 and 536 is missing a few talkgroups that I'd like to edit the alpha tag on and add a couple missing talkgroups. The person responsible for building the file for this area forgot one high priority talkgroup out of the group of fifteen. The alpha tags all start out the same and are long, so I don't automatically see which talkgroup it is. I need to rewrite a bunch of those files. Can it be done or will I have to build my own list?

Thanks,

Bill

You cannot edit the main dB. You can copy
that system to a FL and edit (or add to) that.

From: Richard Carlson
Topic: 3931 Message: 3933

The best thing to do is to submit the correction to RadioReference. This requires a user name and password, a free membership is sufficient.

Once submitted the admin for that area will "work" the submission and hopefully get the database corrected. Once you see it appear in the database it will be available to Sentinel the next time the data is pulled, usually on Sunday or Monday.

In the meantime you can add the talkgroup to a Favorites List, either on it's own or by importing the system from the HPDB in Sentinel and editing it there.

3934. Public Service Band Frequency Capability

Yahoo group: BCD536HP
Date: 2016-09-12 17:23:45 UTC
From: fd5016@...
Topic: 3934 Message: 3934

I'm considering purchasing Uniden's BCD536HP and have a specific question about Phase 2 frequency capability. Can anyone tell me if frequencies 806.0000 - 823.9875 NFM 12.5 Public Service Band and 849.0125 - 868.9875 NFM 12.5 Public Service Band are P25 phase II capable? Thanks in advance.

Larry

Yes, they are. Although the PS band was reduced
in size a little and no longer extends to 824/869 MHz.

The lower segment is the input for the upper segment.

Are you asking in general or in regards to the 536?
AFAIK, the x36 will handle Phase II on all frequencies...

3937. BCD436HP Using in vehicle

Yahoo group: BCD536HP
Date: 2016-09-12 20:26:40 UTC
From: TLFerg53
Topic: 3937 Message: 3937

I currently am using a Radio Shack 200-channel handheld scanner in my pickup to monitor local and area police and fire with it connect to an external high band antenna and it works great except it’s not digital. It is connected via cigarette lighter plug and comes on and goes off with the key and I’ve had it long enough to have used it in several vehicles.

I have had a BCD436HP for a couple of years now and would love to use it in the pickup, and have on occasion, but I can’t get it to automatically choose “serial” connection over USB when it powers up (plus need to get the clock update). It works great once it’s up and running and picks up both digital and analog as well, just is not as automatic as the RS handheld.

Any ideas or suggestions on how to get around this would be greatly appreciated.

Thanks!

Tim

If you don't need the recording features, you could remove the batteries
and just use the USB port for power. That may work.

Verification please;

Having read UpMan' reply with the following unknown to me "(IIRC)", phrase... at the same time apparently suffering from a senior moment, I went to the X36 manual. That resulted in a No Joy! So, I googled it. Learning it may stand for "If I Remember Correctly", I re-read UpMan's reply. Now it made more sense. But I am still guessing and would appreciate verification. Understanding UpMan's posting policy, a non-response by UpMan shall be understood as an affirmative... IIRC does, in fact, stand for "if I remember correctly"....

Well the 536 does automatically start scanning if you do nothing so I would say that verifies UPMAN's comment.
And the 436 also does the same.

Topic: 3946 Message: 3946

Just would like to add my thanks to Uniden Repair Service for the fast and efficient work they did on my 536. I submitted the unit for repair of the time clock issue but also included a description of an issue. Following a firmware update a couple of months earlier the scanner began acting erratically and had difficulty decoding digital transmissions. Result? They fixed everything perfectly and very quickly and the 536 looks and performs like new - in fact, better. THANKS!
Jim

I'm a new member to this group and have been a analog scanner fan since the days of the Bearcat 250 and I hope to make the giant leap into the digital world of scanning in the near future. I'm on flat ground in the South Bay area of LA and will have to live with an indoor antenna. I want to scan everything in the greater LA area, and I hope the BCD536HP is the scanner that will do the trick. I'll have plenty of questions and the first is for indoor listening is the 536HP much better than the 436HP? Thanks in advance for the help.

3948. No audio from new unit

I just got a new 536 did all of the preliminary settings required. I am scanning and I get no audio. I do not get any white noise even with the squelch wide oped but he scanning does stop with it wide open though. I am in the Michigan Public Communications system. I would appreciate any help I can get. My HP1 works just fine. I think it is defective but I may be wrong. Please help.

You won't get squelch on a trunked system. You also won't get squelch on a CTCSS/CDCSS/NAC programmed channel. You would have to program a channel with no squelch protection and even then if scanning you would only hear squelch noise when it got to that channel in the scanning cycle.

Even an external speaker will not have
squelch noise on a trunked system like MPSCS.

The audio gate never opens under that condition.

Yes, but the scanner won't "STOP" on the frequency if CTCSS/DCS were the issue. It may slow down or pause to sample the subaudible tone, but it won't stop as originally reported.

Program in one of the NOAA weather channels that you can normally receive. If you don't get any audio from that, I'd say that you have a defective unit.

Any NOAA channel or any AIR (aircraft/airport/control center, i.e. AM), will use the squelch, so if you turn the squelch to zero on one of those – you should hear at least static (if there is no station).

So program one of these

162.400

MHz

162.425

MHz

162.450

MHz

162.475

MHz

162.500

MHz

162.525

MHz

162.550

MHz

This is really embarrassing but my problem was that after i installed Sentinel on my computer and did both updates, I got distracted for about 15 minutes and when I came back the the scanner, I had forgotten to do the write to scanner. Wow, good memory but real short! Anyway the 536 works as it should. I thank everyone for their advice.

From: ka7gzr@...
Topic: 3959 Message: 3959

Hello all.!
I have owned my 536 for about 2 years. It runs on Radio Reference 24/7.I noticed yesterday that the display was blank except for some black thin lines on the left of the display. The radio works fine including the back lighting. I can connect to the radio with Proscan and see the radio display with the program. So the only thing not working is the display itself.
Any ideas?
Jim

Uniden repair.

It might be a loose connection, but taking it apart and checking that would be your call. It shouldn't void the warranty, but I can't say for certain.

I load new favorites and alter my favorites via sentinel. After I am done and write to scanner I have to set zip, serv, range and scan settings all over again. Is this normal or is there a setting I need to do to keep these settings?

Is there a way to scroll through your favorites on the 536 and then select the favorite you want to listen to?

Yes. If you are talking about your Favorite Lists (FL's).

Menu>Set Scan Selection>Select List to Monitor>

Yes. If you are talking about the systems that make up your FL's.

Menu>Manage Favorites>(choose a favorites list here)>Review/Edit System

Only read after you make changes to the scanner. In my case,
my newest version is always on the PC, so I never read it first.

In the case at hand, make the changes to the scanner then
read it. The SW will then have the latest version of your setup.
You are obviously making changes to the scanner after writing. The read
will solve that.

If you have all of them enabled, you can scroll the systems by hitting the SYSTEM button then let it hold (reversed contrast) then hit the SYSTEM button again and scroll through the Systems.

There is no FL hold button.

Of course, you can use the menu as the last post mentioned as long as all applicable Quick Keys are enabled.

I just use FL Quick Keys to select which FLs I want to scan.

3970. Setting a Priority Channel in FL list

Yahoo group: BCD536HP
Date: 2016-10-03 02:16:59 UTC
From: Tim Ferguson
Topic: 3970 Message: 3970

On scanners in the past I been able to set a channel, usually #1, as my priority channel that the scanner automatically switches to if there is any radio traffic, often at it sampling that channel every two or so seconds. Is there a way to do this on the 436 & 536? I may have a misinterpretation of the "Priority" channels and how they are used.

Thanks,
Tim

Same way as other scanners. Note that trunked priority works differently
since trunking works differently. Also conventional priority will not
work when scanning a trunked system.

Tim,

Priority assignments are not channel specific anymore. Just assign the channel you choose and make it one of your Priority Channels.

Menu>select the Favorites list>Review/edit system>choose a system>Edit Department>Edit channel>Set Priority. Turn Priority on.

You might like to check Set Alert also. It's one down from Set Priority.

Bill

Hello:
In Sentinel use the setting DND (which means "do not disturb") it is found "edit profile" then go to miscellaneous. This setting will keep the scanner from checking priority.
Thanks

That was interesting. I found that the “Priority” column had slid off the right-side of the screen. Once I readjusted column widths, it was back and programmable.

In all this process, though, I did find that you almost always need to use the USB cable from Uniden. I had a cable that powered up the scanner, etc., but neither computer would recognize the scanner, and I had to retrieve the Uniden cable from my car which worked like a charm.

Thank you, once again, for the help!

Tim

I am using a Uniden Bearcat amplified speaker on one of my BCD536HP's with no problems.

But I am also wondering if it's NOT the amplified West Mountain speaker causing the problem when you say it works fine on your ham gear. Plug it back into the ham gear and see if it has a buzz there. (It may be the speaker plug got frayed by the act of pulling it out of one radio and into another...causing the wire to fray or short out. Wiggle the wire by the plug. Any difference? If so, rewire/replace the plug.

Or, are you plugging the speaker into the headphone jack on the front of the radio? Or plugging it into the back of the radio? That's where it should go.

If plugged into the back and you still have the problem, and you tried what I wrote above with no results, get another speaker to try. An amplified speaker would be preferable.

There was absolutely no hum or buzz using the West Mountain speaker on other type of equipment. The speaker is plugged into the back of the radio. I had a similar problem using an amplified speaker on a Home Patrol plugged into the headphone jack since there is on external speaker provision on that model. I am now using a non amplified speaker on the 536 which does not have that problem.
I was contemplating buying the Uniden amplified speaker since it was made for this type of equipment.

The rear jack (assuming you have it plugged into the correct rear jack, there are 2). is meant to drive a speaker, not an amplified speaker. Impedance is different. An ampd speaker should use the front earphone low level jack unless the ampd speaker has an adjustable input.

Topic: 3980 Message: 3989

The West Mountain amplified speaker that I just looked up is a 12v speaker (https://www.dxengineering.com/parts/wmt-58406-947). If the scanner and speaker are using the same 12v source, such as a mobile installation, and the speaker is directly grounded, he could be introducing the previously mentioned ground loop ???? (question marks for I don't know).

Try powering the scanner and speaker from the same source.

Try powering the scanner from the RR. Your other radios likely
don't do it because they are powered from the same source.

I use two of these (MLS-100) speakers in my car, on the BCD536HP and FT-7900. On the scanner, the audio level is fine, because it has 5 watts of audio out. On the FT07900, however, it has only 2 watts. Often not nearly enough. THAT radio would benefit from an amplified speaker. However, the point, here, is, that as far as NON-ampllfifed speakers, the MLS-100 is the best there is.

Yes. Powering both the 536 and the speaker from the bus I ran direct from the 12 volt battery. (The bus utilizes 20 amp fuses both plus and negative). This bus is dedicated to a radio console in which I have the 536, 3 ham transceivers and 2 of the Bearcat amplified speakers you mention. Any inline fuses on the power cords on ANY items connected to this bus were left in place... didn't see a need to eliminate them plus if the item they were protecting where at a low amp setting, they need to be inline.

If you are having trouble getting the amplified speaker to deliver expected volume, make sure you are NOT plugging the speaker's audio cable into the front earphone jack. That jack is NOT designed for external speakers. That jack is deliberately "dummied down" in an attempt to protect your hearing. Earlier models did not have that feature, should you forget to turn the volume down BEFORE you put on your headset or earplugs... so you would not subject your eardrums to excessive and possibly damaging audio levels. Use the audio output jack on the rear of the 536!

Dean,

I answered previously your questions but find I'm wondering why you asked them... what caused you to be concerned with using an amplified speaker and how power was being supplied?

On an unrelated note, a third BC23A was installed on my motorcycle handlebars and used with a Uniden Home Patrol 1. I experienced a failure with that speaker-no audio whatsoever. I haven't trouble shot it yet so I can't give a cause for its failing.

Well, I just ordered a Bearcat BC23A speaker. When I get it I will power both using Anderson Powerpoles to a common Rigrunner from an Astron RS30M. I hope this will eliminate any speaker hum and buzzing I was getting using the West Mountain Power Speaker. I had the scanner hooked up using the included 12V adapter plugged into the wall and the West Mountain speaker plugged into the Rigrunner using Powerpole connectors powered by the Astron RS30M and got the hum and buzzing from the speaker. And yes, I realize the speaker gets plugged into the back of the scanner.
I really hope this works. If not, I will have a BC23A speaker for sale!

Your weak link in that chain is the wall wart power supply, notorious.
Try running everything from the Astron, direct.

Did you ever try running the scanner off the RigRunner?

Also, you will have to plug the amplified speaker
into the front jack. The rear jack is already amplified.

The scanner has enough audio output for me to hear the audio in my car, at freeway speed, with the windows rolled down and all the wind noise. No need for an amplified speaker. I certainly can’t see the need for one indoors. But to each their own.

When installing your scanner in dash or in a centerline radio console, the stock speaker is almost useless. Hence the need for an external speaker. Personal preference comes in when deciding on installing a non-amplified or amplified speaker. I figure spending the difference on an amplified version is money well spent, giving me the option of added volume should the need ever become necessary. Planning for the expected need, then doubling your ability eliminates the need to go back to well. Some like to be able to monitor while out of the vehicle (ARES functions, etc.), where the external speaker can have double duty. Motorola's external speakers used to come with an "L" bracket, used to hang it on its supplied mount attached to the interior of the car or removed and hung on a rolled up window outside. They weren't amplified, the speakers were built to accept the higher volume levels of a commercial radio. One speaker, dual purpose.

They were upgrading all the police radios in my town... used a firehouse to do the work. I found them throwing the old speakers in the trash, but the radios had to go back. But the speakers were free for the taking. I opened my locker and told them to toss them all in there. I made out pretty good... got 10 speakers and their brackets!

Since that's where you are supposed to plug in the speaker, it would operate as advertised once you supplied power to it.

The front earphone jack is for just that, earphones or earbuds. The level of volume is "dummied"" down" deliberately in order to protect your hearing (in cases where the volume wasn't turned down first... and BEFORE the headphones are donned.

It could over-drive the amplified speaker and damage it.

It could also cause distortion of the audio for the same reason.

I wish they kept the Line Out jack they had in previous
models, as that was ideal for an amplified speaker.

Dean,

I believe it's a wait and see kind of thing... I don't know if a cause was ever determined by lot number (a particular parcel of scanners created between known dates).

The good news is if it does affect your radio, Uniden has a repair program in place where you tell them, they inform you they will send you a return merchandise authorization with free shipping when they are ready to accept and turn your radio around as fast as they can. That way it's not sitting on a shelf in Texas waiting it's turn to be fixed, it's sitting with you until they are ready to fix it!

I have not heard of any date where they will be ending this program. I expect if the repair is for the clock issue it gets fixed free regardless of how old the scanner is.

Hope this helps,

Bill

If you are asking how to determine if your scanner is exhibiting the need for repair, your scanner will behave like this... when you turn it on it will prompt you to enter the date. If nothing is done, it will continue booting up after 5 seconds. Or you can do as instructed and start within the 5 second window and enter the date (and time?). But it will not remain after the scanner is turned off. You will again need to enter the date the next time you turn the scanner on. If you see this prompt asking each time you turn on, you will know it's got the problem. And that's how you will know.

Bill

And that's provided you have charged the RTC battery.

All scanners will do that if you have not charged the battery.

Keep in mind that the internal clock battery will only keep the time for some period of time between a couple weeks and a month if you've been using the scanner regularly for over 50 hours in the last several days. Turning it off and leaving it for long periods will deplete the battery.

The battery only charges when the scanner is on, not when it's plugged in but powered off. You're meant to USE the scanner - not ignore it for weeks at a time...

Yea, they should leave it up for longer periods or archive it where we can access it. I just sent that URL to the police chief of a neighboring town because the entire PD is encrypted. I bet he tried to open it and got nothing.

That exact situation happened last night in the Dallas/Fort Worth area. Texas Department of Public Safety Trooper got a lojack hit near the city of Grand Prairie which recently went to Phase 2 and Encrypted PD comms. Trooper requested DPS Helo which was already in the air on another call, cleared and headed his way. DPS helo guy is very well informed about radios and the area systems. He informed the ground trooper that his radio probably wouldnt work with Grand Prairie as they were encrypted and they didnt share the keys with DPS or other agencies. He tried to help the ground trooper by telling him to go to a common law channel on his radio which they could try to patch into the Grand Prairie radios. Yup that didnt happen.
They then tried to get another neighboring agency, Cedar HIll to assist but guess what, they are on a NXDN system and cant communicate with anybody either. So DPS, Grand Prairie and Cedar Hill are all out in this neighborhood looking for a stolen car / lojack hit and none of them can talk to the other.
Having different radio systems, different protocols, and different strategies in place has sure made a mess of the public safety community radio systems in my opinion. Having spent almost 10 years in a radio shop it really makes me question the leadership of some of the decision makers in police departments. Officers are required to go through all sorts of training but yet one of the tools they use the most they get no training on. I sat with a DPD officer the other day after they made a change to his radio at the radio shop and asked him if he knew how to really use it. He is good at switching through the primary police channels but was lost about anything else in his radio.

Maybe i should volunteer my time and offer a radio course to officers.

FEMA has an online course for interoperability. It's free but you have to register and get your ID number.

So an old saying is: You cannot have a secret police until they start keeping secrets.

For those of you that have experience with inter-agency responses mutual aid responses encryption is one of the biggest nightmares you can have. No real mandatory standard for encryption pretty much left to radio company to use what they see fit, different brands and models of radios will not communicate with each. I am aware of a mutual aid/task force incident where HTs were issued from fire to LE as the issued radios for the department although inter-operable could not be used as encryption was always active. The keys to the kingdom were with a radio contractor that could not respond in time to correct the issue and no the people on the ground could not disable as a user accessible was not available (and yes it should not have been).

Given the justice department aggressive behavior toward local PDs encrypting just breeds mistrust at a local level, what are they hiding why is this needed, should the DOJ investigate we have no idea what could be going on ?

On special ops, stings etc confidential discussions, negotiations a well managed encryption program does afford some level of protection to the LE.

And here we are, 15 years after the September 11 attacks. The follow up reports for both NYC and the Pentagon spoke of problems with radio interoperability. Millions of dollars in federal grants have been given to state and local agencies to upgrade their radio systems to improve interoperability. Some portion of that money has gone to build encrypted radio systems and agencies refuse to share encryption keys with other agencies.

So, 15 years and billions of dollars later, the situation is arguably worse.

Your tax dollars at work.

Well they really do have it figured out here in Wyoming. The system is "managed" state-wide by the state. All of the encryption keys are managed by the state at the state level. No one else is given any information. Here is an example; if a town needs to replace a mobile radio, the radio has to be shipped to the state capitol so the state radio tech with the secret decoder ring can enter the secret encryption into the radio and then send it back so they can use it. Fortunately the system doesn't work very well for our county so we don't have a great interest in using their system. Of course we also can't talk to the other counties.

Depending on your perspective, that's either they have it all figured out or a single point of failure.

I'd also venture to guess that the Wyoming radio system is much less complex and easier to manage than some of the cities we've talked about.

You also point out one of the potential problems with state wide systems. They don't always work equally well in all areas of the state.

If you're talking about WyoLink, they don't
just manage it - they own the system.

Now, what happens when you cross state borders?

No matter where you draw the line, there will always be a line with
proprietary systems (of which encryption is one since it requires a key).

Next, the Feds will create another agency to "solve the problem" and
they will be programming all the radios...

Someday they will figure out that analog is interoperable.

First, I draw your attention to the topic at hand... some time ago it was discussed on a specific scanner group. It wasn't getting heated, just off topic. But since it was off topic the administrator instructed any further discussion be taken elsewhere. And it was. I believe RadioReference.com has some groups interested in encryption, the good and bad.

I started this thread by posting something that might be encouraging to those of us who believe encryption is not a tool to be used as a blanket, covering ALL comms. And those that don't want to see anything at all encrypted. Attitudes are changing. It's encouraging that there is hope for the hobby or sport of monitoring. It will lend itself to the growth of the industry and allow the manufacturers to continue to produce and upgrade scanners. That's all I meant to do by boating the article link... Just to make all aware of some good news as it related to the hobby. I write this to make it known the topic may or may not get shut down. But if it does, it will be understandable as it relates to the scanning hobby generally, and not specifically to theBCDx36HT's, which is the title of this group.

FEMA has interoperability plans available to all situations. An encrypted system terminates in audible voice at the speaker. It's no longer encrypted. A mic can hear the intelligible audio and in turn send it any which way we care to. And that's the down and dirty definition of interoperability. From that low tech option, FEMA has built out the process (in some cases to a very high level of technology) whereby it matters not what kind of systems need to be linked together. The only question is Does anyone want to... it's a matter of choice.

The Justice Dept has zero control of whether a Dept encrypts or not, that all sales BS. And then the locals falling for it.

Sent from my Verizon Wireless 4G LTE DROID

>For those of you that have experience with inter-agency responses mutual aid responses encryption is one of the biggest nightmares you can have. No real mandatory standard for encryption pretty much left to radio company to use what they see fit, different brands and models of radios will not communicate with each. I am aware of a mutual aid/task force incident where HTs were issued from fire to LE as the issued radios for the department although inter-operable could not be used as encryption was always active. The keys to the kingdom were with a radio contractor that could not respond in time to correct the issue and no the people on the ground could not disable as a user accessible was not available (and yes it should not have been).

Proprietary encryption keys notwithstanding, my comments are valid. Because a key is not needed when a working encrypted radio is freely available to those agencies that wish to engage in interoperability. The portion of the signal that holds the audio that comes out of the speaker has already passed through the un-encryption process. Perhaps my post was misinterpreted.

Yet again, that is if everyone is using the same digital format as well as encryption.

Yes, Wyolink, which is a VHF system. The Wyoming Highway Patrol is on the digital (not encrypted) Wyolink. They can't talk between with local police and sheriff. Oh wait, they can here in Wyoming. Pull up next to each other and put your window down. Or meet at McDonalds (that happens a lot). Cross the state line 18 miles away and they are on the 700 MHz system.

No. once decrypted, passing along the speaker audio is NOT a encryption concerned. At that point there is no encryption. Therefore, keys or protocols are not in the mix.

Again no. I'm talking about the input to the speaker of the radio that is encrypted. At that point all encryption (and digital) has been converted to unencrypted analogue so it can drive the speaker.

I understand exactly what you are saying. But there is much more to a radio system than a speaker. You cannot simply program a radio with the correct frequency (assuming it uses the same protocol) and expect unencrypted audio from the speaker.

Just as there is much more to the moving violation than the traffic stop, you cannot ignore everything before the speaker audio. There were many steps prior to that to get the audio from the transmission there.

I will agree that audio at the speaker is not encrypted. But it takes more than a speaker to communicate with other radios. It's the rest of the system that is the issue, and is the obstacle to interoperability.

The same holds true for the microphone before that argument is raised.

Even using the same type of speaker and mic, a NXDN radio will not talk to a DMR radio, and an encrypted P25 radio will not talk to an unencrypted P25 radio.

From what I'm understanding, I think what he's trying to say is that you can take that radio running the encryption, place a mic at the speaker, and then broadcast that audio through another radio as unencrypted audio for interoperability purposes. All you would need from the encrypted agency is one radio with the encryption key enabled.

From: Bill Nolan
Topic: 4010 Message: 4050

Oh, where you are coming from is clearer now. Or hopefully it's understood. You are going for what happens AFTER I give you two leads that feed the speaker with intelligible audio (what our ears hear). The path I am explaining started BEFORE that, with the encrypted radio that feeds those two speaker leads... and ends at the speaker leads.

Now, if I were to go further (into the realm you are talking about (if I follow correctly), [I will set up a scenario-two non-compatible trunked encrypted systems. I want both to talk to each other];

That analogue speaker signal can be brought forward to a radio on the other system and inputed into the mic input, which now makes it the mic input to the radio. And you know the rest. At some point that signal gets digitized and encrypted and transmitted as an encrypted signal on that system. That takes two transceivers and you don't need to touch either of the comm racks back at the trunking sites. Do the same in the other direction using the same two radios and both systems will be able to communicate with each other. I'm just saying interoperability IS possible REGARDLESS of what kind of incompatible systems we talk about provided there is an interest on both sides to do so. My example may be down and dirty but it does work. It's the very same thing as two cop cars side by side, their hand mics stretched into each other's car and both running vox. When the speaker starts blaring in one car the vox mic starts the radio it's attached to transmitting what its hearing. Just on a more permanent basis.

Bill

Bill

Yes, I get that now, too, after his last post.

I would hardly call that reliable. If either of those radios fail, your interoperability is gone. Also, who would seriously hold a mic to a speaker 24/7/365? Any competent designer would just make a permanent patch rather than using speaker/mic audio.

There is also the issue that you would have all that radio traffic using one ID on a digital system - IOW, you would not know who is really talking.

Using this concept, even CBers have interoperability on the state police systems. ;-> They (the state) will be so happy to hear that.

Joe M.

It is always great learning things from these lists. So all I have to do is order the correct speaker and connect it to my scanner and I can hear ALL the encrypted radios transmissions. I never realized that is was that simple and easy to do. I'm really looking forward to it. ;)

Sure. What could possibly go wrong with that Mickey Mouse set up?

Interoperability with encrypted systems can work ONLY if all the participants are on the same system or at least have that system and it's keys programmed in its radios. If the keys change then they would have to be able to get the new keys over the air before the incident occurs or they would be locked out.

Using a speaker-mic patch is never a good idea. If that is the only way you have to make it work then you have failed.

A little bit better is a field-patch, this can be done with various interface devices (bridges). This now ties up 2 channels instead of one but will do in a pinch sometimes.

Better than that is unencrypted shared channels or talkgroups. These can be in any agency's radios and no keys are needed. As long as everyone has the channels they can communicate.

The biggest problem with interoperability is not the hardware but the mindset and training of the participants. Command and Communications officials need to know how and what to do to ensure that units that NEED to talk to each other can and keep the units that shouldn't be talking off the radio. They need to know what channels to use and the limitations of them. Don't use the statewide trunked system talkgroup when all the participants are 50 feet away from each other. Don't think you can talk to Mayberry from Mt. Pilot on a simplex channel on a portable radio.

Encryption has it's place, mostly for tactical and covert operations. I don't like to see it on dispatch channels but can understand why it is done. It should never be done on interoperability channels unless ALL possible participants and users have that encryption type and keys. Even then it is not a practical idea and is a poor operating practice.

If I recall my ICS training properly encryption is not supposed to be used on any interoperability channel anyway, even if everyone has that channel. Let the entry team use an encrypted channel but the guys on a traffic post don't need it.

Which of course makes encryption completely useless in the first place.

Sent from my Verizon Wireless 4G LTE DROID

Topic: 4010 Message: 4056

Training, training, training. I have heard incidents where no one had a clue what to do. Dispatchers who couldn't make patches and officers who can find a particular channel in their radio. In a hot incident neither is good. I sure wouldn't want to be an officer who is pinned down or trying to get to a scene lights and sirens and try to change channels on the radio. I've seen it too many times.
Here there is little encryption, and you still have major problems with interoperability due to a serious lack of training. And in some cases it's an issue that goes back to radio techs who don't program the radios properly. One officer last week couldn't talk to the responding LifeLine helicopter because the channels he needed were not present in his radio.
My guess is that part of the problem with that was an overworked tech who has been working 7 days a week on putting new systems online the last 6 months + and in this case we had serious life threatening issues with his radio. Fortunately another officer on scene did have the channels in his radio.
Again, it comes down to training however as this officer should have verified all the channels he is required to have were actually programmed in his radio and that he knew how to find them.

When Harry Marnell's LAPD communications system history website was up,
I recall a section about a similar system that LAPD used to rebroadcast
some calls. Since they didn't have repeaters, they'd put a microphone in
front of a speaker so they could rebroadcast "hot shot" calls. I forget
the details of how that worked.

Of course it was in the 1950s or very early 1960s, so I doubt it will
work now. ;)

good evening,

apologies in advance if this has been cover before, didn't find a resolution.

I have updated sentinel to latest version, purchase DMR upgrade installed per the instructions.(today)
Scanner displaces that DMR is activated
Have a local DMR Ham repeater with in line of site no reception
I also tried simplex and Close Call with no reception
using CS751

figure I must be missing something just not sure what?

Thanks in advance
Matt (N1TKF)

No reception at all or no decode?

Is the scanner running the latest firmware version?

Close Call will not work with any TDMA mode since TDMA does not use a
constant carrier in simplex mode or on repeater inputs.

Make sure you are not too close when testing in simplex.

Also it depends on how the ham repeater is set up. In some cases, a local user must use a talkgroup on that repeater in order to access the network (TELLS the repeater controller to access that group on the network; I'm explaining it poorly, just ended a 900 mile one day road trip an hour ago). Once that user accesses the net, only THAT talkgroup can be decoded.... once that user stops, it eventually times out on the repeater and you won't hear it.

OR the repeater can be set up to default to talkgroup(s) 'permanently'. Since there are fewer hams using DMR than analog FM, there may be LONG areas of silence.

Then there are a few networks that can be accessed, I'm unaware if they cross connect, I haven't been that deep into it yet. I may buy a cheap DMR to play with (under $150) but it hasn't risen to the top of the heap yet.

It works. It may be a LONG time before you hear anything. The commercial side is often more busy.

That example is just that... an example. In reality the radios would be hard wired together. A speaker output is the same as a mic input. All that is needed is to balance the input to the mic circuit from the speaker output. When you come right down to it a mic and speaker are one and the same! As for reliability, it worked as advertised and was used in cases of "quick and simple" or "down and dirty" until the techs built something better. As for dependability, go packs were built using two radios set up on low power and parked close to where the systems could be heard so as not to burn out their finals. And they ran and ran and ran. I remember a tech telling me "If it ain't broke don't fix it!" So they used this method instead of building out a patch system. Various reasons for this attitude... mostly because the systems were due for upgrades anyway, no sense throwing money into an old system.

4063. BCD996XT GPS vs 536 GPS

Yahoo group: BCD536HP
Date: 2016-11-01 10:48:47 UTC
From: AJB5540@...
Topic: 4063 Message: 4063

If my message is deemed off topic, I apologize but I cant seem to find an answer anywhere else. I have both a BCD996 and a 536. I use the GPS on the 536 every day without fail and it works great, but I cannot quite grasp the 996XT process. It would appear that in order to use the GPS for location based scanning on the 996, I would have to manually enter the Lat Long for any location I pass through, as opposed to the 536, which already has that info in its database. Is this correct?

Again, I apologize if this is considered off topic. If someone wants to PM me that would be fine as well as I don't want to be a nuisance to the group.

Thank you and regards.
AJ

The BCD996XT work almost the same as the BCD536HP when using location control. The main difference depends on how you program the BCD996XT. The BCD536HP has all the location information programmed into the main database for all sites and departments. For the BCD996XT, you must also program location information for every site and channel group. If you use software to import from RadioReference, I believe that most of the programs out there will include the location info. If you program by hand or manually type into the PC software, then you'll have to include the lat/lon by hand when you do that programming.

From: Evan Platt
Topic: 4065 Message: 4065

Found a new to me DMR frequency. Last night it was conventional, AFAIK (I don't recall seeing CAP or anything else) but today I'm seeing CAP indicators, and very quickly all '0's except color code: NT 0, Sys 0, TG 0, etc.

Is that normal?

4066. digital ID bursts

From: n1chu@...
Topic: 4058 Message: 4066

I listen to some conventional fire dept. frequencies that use Motorola ID data bursts. The bursts identify which radio is transmitting. Dispatch has an alpha/numeric display readout, assigning the code to a particular vehicle/portable and I was wondering if reading the code and assigning a alpha/numeric tag is possible with the BCDX35HP's. I believe it's possible with the P25 trucker systems but my need is for a non-trucked conventional VHF High Band system. If it is not, are there readers available for purchase?

Agreed. There was MDC decoder freeware out there at one time, I think through Batlabs, however, I don’t see it there anymore. There is still an entry for it on the Antistatic webpage (www.antistatic.org/winmdcd), but the download link is broken. You may be able to find it searching the net for “WinMDCD”, but Caveat Emptor, be careful what you download! As long as the OP is sure it was Motorola radios, the chances of it being MDC are very good, but if it was a competitor, such as GE’s G-Star, all bets are off.

Motorola radios.

It's technically possible for the scanners to decode it, but I doubt you will ever see it added to the firmware for lack of demand and possibly legal (copyright) reasons.

From: Bill Nolan
Topic: 4058 Message: 4076

Joe M.,

I doubt MDC (Motorola Digital Code) is treated as proprietary property, at least not anymore. Used originally to allow the comm system to identify a transmitter in use, other makes of radios were also able to be programmed as compatible (with the addition of a MDC or aftermarket chip). If there were proprietary licensing maybe the patents ran out long ago. I say this because I installed a non-Motorola radio in my Son's vehicle (a Ham dual bander certified for both Parts 90 & 94 of the FCC Communications Act). He is a Firefighter. When his radio didn't give dispatch an identifier, a comparable MDC type chip was added, programmed and satisfied the concern. And since we only paid for the component, and I don't remember it being a Motorola chip, we just figured there were no issues with licenses, etc. Its an assumption that may be wrong. If there ARE licensing requirements, it could be another good reason why scanners don't have that feature.

But it also raises the other question where a P25 trunked system can be programmed to provide alpha/numeric ID info in the display window? I know the process is different but the results would be the same. Hoping Paul Opitz weighs in on the question.

So I have one direction figured out, that of transmitting the code. But that just provides a digital code, a burst, to the FM signal, placed either at the front or rear of the transmission. Now I'm after the ability to read that code and tag it with an ID.

Bill

From: MCH
Topic: 4058 Message: 4077

There could have been licenses involved with the aftermarket chip.

All that aside, I expect any patent on MDC-1200 (the only type in any real use anymore) will run out soon if it has not already.

P25 is embedded in the datastream and is part of the P25 specs, so they are not at all the same as MDC-1200. Other manufacturers had their codes, too, such as GE's G-STAR (I think that's what it was called). Al;l of them used tones to indicate digits and they were sent at the beginning or end of transmissions (or both).

I forgot about the Hytera models, but those would be a cheap portable solution. There is also the SW Duane posted. I would get it while you can just in case it suddenly vanishes.

Close Call works fine on DMR repeaters. It's just simplex and repeater inputs that won't work since Close Call requires a constant carrier and DMR is TDMA in those modes.

4080. activating a specific quick key on a favorites list question

Yahoo group: BCD536HP
Date: 2016-11-07 02:26:24 UTC
From: jg1067@...
Topic: 4080 Message: 4080

I just recently purchased my BCD536HP scanner about 2 months ago and I quickly learned how to program it and configure it to my liking and it's working great. One thing that continues to elude me after much trial and error and reading a couple different manuals for the scanner is how to enable a specific quick key (I think that's the correct terminology).

Here is the scenario:

Favorites list Quick key 1 is configured as "Tazewell County". Under Tazewell County, I have TazComm (quick key 1) and Federal Prison (quick key 2). Under TazComm, I have City Police (quick key 1) and Sheriff (quick key 2). So to enable/disable the Sheriff, I can enter 1.1.2 and hit the enter key.

So, in other words, if the scanner is set to "nothing to scan", I press the 1 key and enter key to "enable" Tazewell County, and I can enter 1.1.2 + enter to toggle on/off Sheriff under TazComm under Tazewell County system. Hope I haven't lost you yet.

I have Quick key 4 set up as "nationwide" stuff with many sub-quick keys (18 to be exact) under it. For instance quick key 14 under quick key 4 is CB radio frequencies.

Now here is where I try to do something that doesn't work. Say I'm scanning Quick key 1 stuff for TazComm just fine and I suddenly have an urge to want to scan the CB radio channels that are assigned to quick key 4 sub-key 14 (4.14). If I just enter 4+enter, it starts scanning all 18 of my nationwide quick keys. I'd like to just be able to type 4.14+enter to have it scan all of my Quick Key 1 TazComm stuff and the CB radio channels but it doesn't work -- it just disables the CB radio stuff when I enable quick key 4.

The only way I can get it to do what I want is to type 4+enter on the keypad to enable "nationwide" favorites list containing 18 sub groups, then type 4.1+enter to "disable" quick key 1 under quick key 4, and continue to do the same thing for the other 16 quick keys which is very time consuming. I'm sure there is a way I can easily add CB radio quick key to my scans but it seems to elude me.

I am sorry if I am not using the correct terminology or if I have not explained myself clearly.

Any help would be appreciated! Thank you.

Topic: 4080 Message: 4081

Let's start by using the specific terms. You are saying Quick Key, but don't specify which ones. I think I can follow what you mean, but the hierarchy is:

Favorite List Quick Key (FLQK)
under those you have
System Quick Keys (SQK)
then under those you have either
Department Quick Keys (DQKs) and/or Site Quick Keys (SiteQKs)

With that understanding, and assuming I've followed your question, you cannot activate 4.14 if all the other 4.x SQKs are active. You would have to disable all the other 4.x SQKs and leave 4.14 active.

If you want to enable it alone you could also put it under another FL with its own FLQK.

Another option is to just disable all those SQKs (4.x) and leave the FLQK (4) active, then just enable the SQK you want to hear (4.14) and disable the one you don't.

One thing that trips up a lot of people is that you have to have the levels above active before you can activate lower QK levels. For example, you have to have FLQK 4 active before you can activate SQK 4.14.

Does that help?

That helps very much and you understood exactly what I was trying to explain. I think I'll probably move some of the nationwide stuff out of FLQK 4 and into other FLQKs to make it easier to toggle on/off SQKs I may want to listen to.

Thanks very much for your quick response and explanation!

Anytime.

In this case, you might be best off putting things in separate FLs and use the FLQK or even the menu to toggle them on or off. I usually don't recommend that, but in your case that might be the most efficient way if you have a lot of things you want to toggle on or off at random times. Remember you have 100 FLQKs and that way they would be available independently.

The exception to that might be a trunk system, as using the Department/Sites (and related QKs) would be easier to program and would scan more efficiently (you don't want to scan the same TRS more than once for reasons of scanning speed). It sounds like your System 1.1 is set up how I would recommend.

4084. Backing up BCD536HP

Yahoo group: BCD536HP
Date: 2016-11-14 13:16:29 UTC
From: Jim G.
Topic: 4084 Message: 4084

Is there any specific data stored on the scanner itself (like in NVRAM) or does everything get saved to the SD card? Now that I've got the scanner set up exactly how I want it, I am wanting to play around with other more advanced features such as ID Search, the analyzer, close call, setting tone-outs, etc.

The reason I'm asking is that I really want to explore this scanner and all of its more advanced features, but I'd like to be able to easily go back to my configuration I had before I start really exploring.

Is backing up the scanner to Sentinel good enough by "reading from scanner" inside the software and saving it, or should I purchase another SDcard and just clone my SDcard data onto it?

Thanks in advance for any replies.

Jim

Depending how "paranoid" you are, I would do both to be sure.

You know Murphy, don't you?

And following up on that... You shouldn't need to 'clone' the SD card
to another SD card. You can simply copy / paste the entire contents of
the SD card to a folder on your hard drive - maybe enable View Hidden
Files to be on the safe side..

Why not just copy the sd card to a folder on your HDD?

Let's say you do what you and Evan suggest and copy to your HDD. Your SD card crashes. Now what?

Answer: You have to go buy another SD card and copy the files to it. Why not just have it ready when you need it?

I prefer having a "hot backup" ready.

Not saying there is anything wrong with the HDD copy - do all three; SD Card, HDD, and Sentinel.

True, nothing wrong with having a spare SD card handy. I have about 5 somewhere in my room LOL... But no need to necessarily have one 'dedicated' to your data as a backup.

I always have extra sd cards on hand and fortunately there is nothing that important that I can't be without one of my 40 scanners for ten minutes. ☐

My scanner won't update off of the database. And when I called Scanner Master, the women tried to walk me through the instructions (as the written instructions are) but it still does not work. She then said that my scanner was unserviceable and that she could no longer help me.

I have no idea what you are trying to do. What exactly do you mean by "scanner won't update off the database."? What is the scanner not doing that you are wanting it to do? What is the symptom (don't try to infer a cause)? UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

4094. Scanner does not receive callback on a talkgroup

Yahoo group: BCD536HP
Date: 2016-11-15 22:49:09 UTC
From: haroldreaves@...
Topic: 4094 Message: 4094

On my scanner I seem to be missing the return call from units. I receive the first traffic but the response is not received. I just noticed this because I was helping someone set up their scanner and had both units on the bench. His is a whistler and it receives both transmissions just fine. The system I am listening to is Cumberland County Tennesse trunked simulcast system. Any help would be appreciated.

What is your channel delay set to? Is the reply on the same TG?

Are you running the latest firmware?

Firmware version is 1.11.17. The delay time is set to 2 sec, but I think I have tried other settings.

Thanks..

4098. Report Printout

Yahoo group: BCD536HP
Date: 2016-11-16 17:22:39 UTC
From: ke4gyn@...
Topic: 4098 Message: 4098

Sentinel does a decent job of handling programming of the radio, but it lacks one major feature. I could really use a report function out of it. Something that will give a complete listing of the Favorite Groups, Systems, Departments, Talkgroups and QuickKeys programmed into the radio.

I know someone had a utility a couple of years ago that could provide this, but I can't see to locate it now. Any suggestions of other software programs that provide this, or utilities that can print this from the Sentinel Database?

THANKS!

IF you could export to a .csv file you could make reports in Microsoft Excel but that is not a current option either.

4100. WiFi not working all the time.

Yahoo group: BCD536HP
Date: 2016-11-19 12:17:58 UTC
From: N1CHU
Topic: 4100 Message: 4100

I have an iPad mini sitting next to the 536 in my vehicle. I am using the WiFi option to have a larger display screen. But sometimes it works and sometimes it doesn't. There doesn't seem to be any rhyme or reason for this. I have rebooted the iPad and/or the radio... reset the parameters in the radio, gotten requests to enter the password (in both cases, after I have rebooted the radio and without rebooting), and have gotten the password screen even after I've entered the password. It keeps asking for the password. I've given up and turned off the vehicle, the radio and the iPad and later turned them back on and it works! And sometimes it doesn't! This has been a problem from day one. I figured it was a bug that Uniden was working on and have waited for firmware updates. My firmware version is 1.10.02. I believe it's the latest.

Anyone else having this problem? Is there a proximity concern, having the iPad located too close to the scanner? My separation is about 6-8 inches.

Finally, is there a hardwire solution? Can I connect the iPad to the scanner using USB? I don't need to use WiFi due to my setup being permanent, mounted in my vehicle, IF there is a workaround.

Bill

Sounds like it could be an IP address issue. I'm assuming you are using a Mi-Fi wireless access point in your car? I'm going to take a guess and say that your 536 isn't always getting the same IP address each time. Also, have you made sure your wireless dongle firmware and the 536 firmware has been updated to the latest versions?

I created a DHCP reservation for my scanner on my wireless router so the IP address of my 536 always stays the same so my Siren app always connects to the same IP address.

4102. Question about service types

Yahoo group: BCD536HP
Date: 2016-11-20 17:59:18 UTC
From: Jim G.
Topic: 4102 Message: 4102

I was exploring some of the advanced capabilities of this scanner over the weekend and I stumbled upon something I don't quite understand.
Under "Select Service Types", I have everything set to "On", but some of the entries just show a "---" and cannot be set to On or Off. A couple of items in this list are "Hospitals" and "Schools" that are like this. Is there a reason that these service types cannot be changed (enabled or disabled)?

My guess is you don't have any channels in the scanner with that service type?

Jim,

Thanks for the response. I did update the radio firmware. It not the dongle. I am going to make changes one at a time to see which one (hopefully) corrects the problem. After I'm satisfied the problem has been fixed, I will then continue with the additional measures. So for now it's the radio firmware update. I'll give it a month.

The downloads contain all the data, so that can't be it. There is no
such thing as a "selective download" of the data. You get it all.

If you cannot select a Service Type, you have all those channels
disabled for scan (FLs with those channel types OFF), or there are none
within range of your current location and range setting, or you don't
have any channels programmed with those Service Types.

I need to research further but I know I did something that omitted the availability of certain service types... and it showed up just as you described when you chose which services you wanted to monitor. It may not have been the way we download the master updates but somewhere there is the ability to ignore Service types. I will try to duplicate this and pass my findings along if someone else doesn't supply a solution to you first.

Additionally, I experienced this without using GPS location control. Not that GPS should make a difference... it should allow for services regardless, range notwithstanding. Just because there are no available channels/frequencies within range doesn't mean there won't be 5 miles down the road.

I mentioned a few ways this could manifest itself in the quoted text.

The most likely way is the FL that has no channels of a particular
Service Type, when that FL is the only thing enabled for scanning.

If you have no "Hospital" channels programmed, you cannot enable any.

That's why I select an area that has them all, enable them all, then
forget them. That way they will all be available when there are channels
of those types in range.

...exactly how I set up my 2 536's and one 436. I've only got 2% of total memory used so there is plenty of room. Capture all download data and simply lock out that which you don't care to monitor, either locking out the services or certain systems within the service type. As it is, with what I've got active, I miss a lot of calls because the scanner is listening to either an active channel or taking its time plowing thru a trunked system. Which raises another question I have... can I speed up the scanner's process when it has numerous trucked systems activated? Is there a "Control Channel" option I missed? Or would it even make a difference?

On the trunked, it takes a while (typically a full second or so) to lock on and decode all the data of a full cycle (to see what TGs are currently active), so all you can do is deal with it. Make sure your HOLD TIME is set to 0 seconds so it takes only the amount of time it needs and nothing more.

Also it should not make a big difference, but make sure only the control channels are programmed in (and Control Channel Only is set for non-P25 systems). That will eliminate having to scan other frequencies which could slow things down when the control channel is not currently in range.

Ok. Thanks Joe,

I will check those settings for optimum speed.

Bill

On the trunked, it takes a while (typically a full second or so) to lock
on and decode all the data of a full cycle (to see what TGs are

currently active), so all you can do is deal with it. Make sure your
HOLD TIME is set to 0 seconds so it takes only the amount of time it
needs and nothing more.

Also it should not make a big difference, but make sure only the control
channels are programmed in (and Control Channel Only is set for non-P25
systems). That will eliminate having to scan other frequencies which
could slow things down when the control channel is not currently in range.

I have a similar setup except the 536 is in my trunk and I use an Ipod Touch with a mag vent mount. When I first did the install I was having many wifi problems. One problem I'll mention that is probably not affecting you, but just in case: I would often start my system (scanner/ipod) and the wifi connection often wouldn't work because my ipod connected with my house wifi first and that would mess it up for a while. I finally had to delete my house wifi from the ipod to stop it from doing that.

My ipod would sometimes connect right away, other times, there was a delay, other times it took restarts to the ipod or scanner, and some times it would just never connect. I finally swapped out the wifi dongle with my other 536 dongle and everything worked fine. I called Uniden support and told them the situation and they sent me a new wifi dongle. It has been working fine since then. That was about 8 moths ago.

However over the past few weeks I'm noticing my ipod is taking longer and longer to register the wifi connection with the dongle, so I hope this one is not starting to go bad.

A few questions:

> I have a similar setup except the 536 is in my trunk and I use an Ipod Touch with a mag vent mount.

Great that the 536 is in your trunk but how to you turn it on or off? Are you able to use ALL of the functions on your iPod? I find that, on the iPhone, that the only functions that work are the “pause” and “resume scan” functions. Truthfully, that’s the only ones I really care about.

> When I first did the install I was having many wifi problems. Yes, me, too. When my car is in the garage or the driveway, the iPhone will connect to the house WiFi and I have to manually connect to the radio. What I have found is that often it may take some time before the iPhone and the radio “talk” to each other and “connect’. I may take 5 or 10 minutes until it “pops up”. Usually, though it connects right away.

I haven’t considered replacing the dongle, though I did do a firmware update and it still acted strangely from time to time.

Turning the radio on and off... I use the ITS-12 or APS-12 (I will verify which one if anyone is interested) from Powerwerx.

Powerwerx DC Automatic Power Switch/Timer
Never turn on or off your radio(s) again! The APS-12 is basically a voltage controlled switch. When the vehicles engine shuts off, the unit senses the drop in voltage and starts the APS-12 timer to automatically shut off after 2 min. to 12 hrs. Read Full Description

I can't say I'd recommend it however... not yet. The first one I had lasted just under a year before I returned under warranty. They replaced it. The second one was no better, lasting just under one year and they initially refused to replace it stating it was out of warranty until I explained they didn't repair the first one, they replaced it with a new unit, and up to that point, I have had two that were found to be at fault. (Since the units are "potted" they don't bother repairing. They did however take the old one back for bench testing. I'm on my third one now with the one year warranty coming up April/May 2017. Here's hoping the third time is a charm. Otherwise, I want to know how a trunk mounted radio is getting turned on and off automatically. Or is it just being done remotely with a power divorcing switch located up front, feeding the trunk mounted radio which is left on? Basically, that's all the Powerwerx unit does... it just does it for you when you forget! Once I killed my battery a couple of times (when my truck sat dormant for a week and a half) I went searching for this protection.

Bill

I often tell people "the more you try to listen to, the less you will actually hear." Try to limit what you listen to rather than trying to scan through everything out there.

I bought a RF 12v switch off ebay, so I use a little key fob to turn the scanner on and off. I also modified the scanner so that pressing the off switch on the RF remote does not just cut the power, it shuts down properly just like using the on/off knob. I use a speaker mounted under the driver's seat and an adjustable volume control on the speaker wire.

Go.

I had this issue in the past with a different model, as close call needs the signal to be X times stronger that any other signal in that band, mine was due to a local TX site shutting down and this took away a very strong local signal.

User manual? What are you looking for? DMR is a mode. It's programmed like any other trunked system. You program the frequencies, associated LCNs, and (optionally) the TGs.

If you want info on the types of DMR itself, look for a post with the subject "DMR Primer".

Jim,

Try this site:

http://info.uniden.com/twiki/bin/view/UnidenMan4/DigitalMobileRadioUpgrade

and within that site is a link to this very helpful reference:

http://www.digitalfrequencysearch.com/

David

Subject: Re: [BCD536HP] Dmr setup

User manual? What are you looking for? DMR is a mode. It's programmed
like any other trunked system. You program the frequencies, associated
LCNs, and (optionally) the TGs.

If you want info on the types of DMR itself, look for a post with the
subject "DMR Primer".

Joe,
You and Dennis are correct. So I made a fl for Green Bay repeaters and entered what I could....there was no place for the frequency...I am missing something. Refresh my memory...the cc6. Is 6 the color and the cc I can't remember.

If you're programming it as conventional, just enter the frequency under frequency. If you're programming it as a single site trunked, program it under the site.

From: Bill Nolan
Topic: 4123 Message: 4131

This relates to your computer display setting...Check to see if the page you have open in the program has been truncated. When more info is provided than the screen can display, a slider bar is provided, usually at the bottom side of the display.

I could have misread the question but just in case I didn't...

(It happened to me and I never even thought about how displaying EVERY vertical column in the program would have an adverse effect-the first column (frequency) got slid off the page! I thought there was something wrong with the software!)

Well, I am making some progress. The only problem I am running into is nobody is talking....the usual thing that happens when changing antennas, cable. etc. It told me that there was no id so I put in scanning, but still nothing. Thanks for the help....the twiki was very helpful.

4134. Service Types? RE: [BCD536HP] Dmr setup

Yahoo group: BCD536HP
Date: 2016-12-07 03:46:49 UTC
From: David Chast
Topic: 4134 Message: 4134

I’m still muddling my way through appropriate programming on the 536 so apologies up front if you already knew this, but if you are hearing nothing, it is also important to check that the “service type” that is selected for your DMR radio group is also set to “On” within the scanner. Each service type is either --, On or Off.

“—“ occurs when the service type isn’t loaded in your scanner. On and Off appear for each service type that is associated with a group on your lists. So, if the service type is a new one for your 536, make sure it is set to On. When I loaded some DMR groups into the 536, the service type was listed as “Custom 1.” I had to go in and then “turn on” Custom 1 from within the menu of the scanner.

4135. Re: Service Types? RE: [BCD536HP] Dmr setup

Yahoo group: BCD536HP
Date: 2016-12-07 12:40:15 UTC
From: Bill Nolan
Topic: 4134 Message: 4135

Jim,

You've found one of the best help groups around here... and while true, most issues have been covered in past postings, there are a ton of them! So ferreting out a specific question might be time consuming. But I like to go back when I've got the time and plow through them-with no particular question in mind, and I learn something new every time. (I think that's because I forget more than I retain!)

I am NOT admonishing those who pose a question here without first researching it. Ive done it too. But it's Joe M.'s fault... His advice and direction are always accurate and he responds usually within the same day (hour) you post your question... WITHOUT giving us hell with some quip like "You can find that topic discussed in previous posts." So if he didn't make it so damn easy... I like to refer to Joe as the "DUH Answer-man"! He must utter that under his breath 10 times a day but never complains.

I would like to credit Joe M. for the role he plays within the group. Not only does he do a great job as "answerman", he sets a high standard doing it. I can't remember any flaming for posing a dumb question or one that was answered already. It seems you could pose the same dumb question day after day and get it answered day after day without insult! (I also know and believe there is no such thing as a dumb question...)

Just sayin,
Bill

I’m still muddling my way through appropriate programming on the 536 so apologies up front if you already knew this, but if you are hearing nothing, it is also important to check that the “service type” that is selected for your DMR radio group is also set to “On” within the scanner. Each service type is either --, On or Off.

“—“ occurs when the service type isn’t loaded in your scanner. On and Off appear for each service type that is associated with a group on your lists. So, if the service type is a new one for your 536, make sure it is set to On. When I loaded some DMR groups into the 536, the service type was listed as “Custom 1.” I had to go in and then “turn on” Custom 1 from within the menu of the scanner.

Subject: Re: [BCD536HP] Dmr setup

Well, I am making some progress. The only problem I am running into is nobody is talking....the usual thing that happens when changing antennas, cable. etc. It told me that there was no id so I put in scanning, but still nothing. Thanks for the help....the twiki was very helpful.

Simply put, it takes as much effort to answer a question as it does to post admonishment, and the former is much more helpful than the latter.

Occasionally, I will refer to a past post, but only when it's so lengthy or so well worded that it's more efficient to point to that answer than to try to replicate it (such as my recent referral to the DMR Primer post).

Thanks for the kind words, Bill.

4138. NXDN upgrade?

Yahoo group: BCD536HP

From: Evan Platt
Topic: 4138 Message: 4138

So looks like Whistler is adding NXDN later this year to the TRX1 and 2 scanners... Any chance there'll be a NXDN update for the x36?

Who knows. Uniden doesn't give that kind of information out, and won't say even if they know the answer.

4140. Antenna spacing

Yahoo group: BCD536HP
Date: 2016-12-15 18:39:22 UTC
From: fred163@...
Topic: 4140 Message: 4140

I have my scanner antenna (Diamond D130NJ) mounted about 5 feet from my CB antenna (Solarcon I-MAX 2000) operating at 5 watts, and 10 feet from my vertical dual band antenna (2 meter/ 70cm) operating at 50 watts. The dual bander is a Diamond X200A. Picture looking at a pitchfork with three prongs. The scanner antenna is on the right, CB in middle and dual bander on the left.

My question is, "Is my scanner antenna too close to the other antennas?" Scanner is a Uniden BCD536HP. I do not want to overdrive the input of the scanner.

Thanks

10' at 50W will definitely cause disrupted reception while you are transmitting - especially in-band, and may or may not cause front end damage. The Discone's lack of gain will help in that respect since it will minimize the RF coupling. Still, you're not entirely safe or entirely vulnerable.

From: xtraham@...
Topic: 4140 Message: 4142

I have about the same setup at my QTH... Diamond D130NJ on the left, and a Diamond X200 on the right, plus one leg of an OCF dipole mounted to the scanner antenna mast. There is about 10' between the masts. I've never had a problem. I can pick up scanner traffic from Manhattan to my QTH in the middle of Long Island, about 40-45 miles from the city..

I'd say don't worry about it.

Way too close. Turn off all other receivers when transmitting. Or separate those antennas.

Bill

Is there a video, youtube video, local community college or ham radio club, etc... that can give me a chronological or meaningful training on how to use my 536? I've had it for 18 months, and now I just leave it off because I can't figure out how to use it.

The easiest way is to enter your zip code and set the range.

Go on to YouTube and search for “K4DPS”. He has a LOT of videos on how to set up and use this scanner, as well as others.

So out of the 2,990 hits on youtube not a single one of them helped you? I have only had mine for 3 days and the 2 days I was waiting for it to get in I watched youtube videos and when I got the scanner in I had it programmed and customized for my use in about 1hour by watching Upman's and K4DPS's videos.

Hope no one minds me putting my two cents worth in the conversation. Like anything in life every person is not a an equal level in learning. Like myself I am pretty good at carpentry, building hot rods, raising birds, I can fix about anything around the house, install duct work, a ceiling fan, replace an motor in a dryer etc... but when it comes to computers and tech stuff I struggle understanding and doing it. I just purchased a Uniden BCD536HP and had them to program the scanner for me. I think you can send your unit to Bearcat Warehouse and they will program it for you for a fee depending on how many counties you want them to program. James

I read somewhere they were discussing the same thing and it was said that it is not good enough to turn the scanner off; it must be disconnected from the coax. Any truth in that?

Thanks

Truth? Yes.

Again, it comes down to signal strength and risk. Personally, I would not need to disconnect the antenna unless the power were higher, closer, or like-antennas. But, it is possible to damage components if enough power were coupled through the antenna.

But, ask 100 people and you will get 101 opinions as to whether it's best to disconnect the antenna. My opinion is that you should be OK given 50W and 10' of separation, but no guarantees!

Lightning is a much higher potential (pun intended) for damage.

From: Rick WA6NHC
Topic: 4140 Message: 4151

I often run HF (200 watts) and V/UHF (50 watts) within 4-5' of the scanner antenna on my pick up (both on the roof). Other than blanking the receiver (no reception) during VHF transmissions, it hasn't seemed to affect the scanner at all. I tried this under warranty first, just in case. ;-) It's been ongoing for months now.

It's not the BEST way to go but the vehicle only allows so much space for separation and full vehicle length still isn't 'enough'.

Merry Christmas!

Rick WA6NHC

Gotta say “bull pucky” on that. Never heard it. Not saying it “can’t” happen, just that I’ve never heard of it. Granted, I’m only running 50w max, which I almost never do. In fact, I rarely even go higher than 5w. Even at 5w, it will sometimes blank the scanner, depending on the frequency the scanner happens to be on at the time. For sure, 50w will blank probably everything, but again, I rarely go that high.

I have two antennas, both on the trunk, about 3 feet from each other. Installed by someone who knows what they’re doing and has done professional installations on police vehicles. Said I shouldn’t have any problems with what I’ve got, and did NOT tell me to turn off the scanner when using the other radio.

Speaking of antenna separations as they relate to vehicle mounts, I remember about the time electronic ignitions started to gain popularity, Ford Motor Company needed to provide better isolation/shielding in their "police package" vehicles. I'm sure all auto manufacturers were included in this concern but I only remembered reports of Ford ignition systems dying when the two-way radios were transmitting. The standing joke was "Sorry, I can't talk now, I'm in pursuit!". The old adage "You can't outrun a cop so don't try... Motorola is faster at the speed of light!" Referred to the cop calling ahead with his radio. But it took on new meaning after the cruiser rolled to a stop after they blanked the ignition. Amateur Radio also became concerned as some of their installations touted higher power outputs than the public safety radio gear. I remember talking to a Ford dealership and was informed there was a workaround kit Ford would install if needed.

Does anybody remember this?

Bill

I've heard of it happening a few times - once without any transmitters in the same vehicle. While you can't prove the local transmitter was the cause, it's likely that it was.

Once I myself even had a portable blow (stock antenna) when I was working on a transmitter and had the scanner on my side. Again, I can't prove it was that transmitter (or any other on site), but the front end was definitely blown due to excessive RF. I believe it was a BC200XLT.

"I read somewhere they were discussing the same thing and it was said
>> that it is not good enough to turn the scanner off; it must be
>> disconnected from the coax. Any truth in that?"

I am answering this under the assumption we are talking about protecting against overload from a transmitter's antenna placed too close to the scanner...

Yes... if you take it to extremes. RF is energy. Lightning is energy. It's important to not only turn off the radio, but unplug it from household current and antennas. (Though I've never heard of anyone disconnecting a rubber duckie, outside antenna connections should be dropped because they have a higher ground potential which is lightning's least path of resistance to ground. An outside antenna usually, or SHOULD be grounded-a copper rod driven into the ground. But if it were a handheld on top of a hill, and it was the tallest thing around affording the best path to ground, well, yea... you might consider disconnecting the antenna.

True, the energy from close proximity RF, even when it's emanating from a 200 Watt transmitting antenna sitting 4 inches away, is nothing as severe as a lightning strike... damage from one ruins components and the other will literally melt the chassis and blacken the room, this whole justification for answering yes to your question is taking things way past the extreme, it's based on simple physics. It's up to us to set parameters. I will sometimes cause my 536 to blink out and reboot back up in my truck when I transmit on my ham VHF/UHF ham gear. But that's not because my antennas are too close. It's because my ham gear sits in a radio console that's only a half inch from my scanner's computer controlled on/off switching! (Among other things) I haven't degraded my scanner's overall performance but I'm not doing it any good either! I should install shielding between the gear. Thank goodness Uniden anticipated people stacking radio gear with their scanners. I took a tour during Fleet Week in NYC and spied a high end commercial hobby scanner as part of a Marine Detachment's standard gear. I asked about it and was told it was an "everyday, off the shelf" stock item I could buy! The Marines used them to "listen to the bad guys". They had it listening to some local comms for the public tours they were putting on and the NYPD tuned in. I said the police were the bad guys? They replied without hesitation "Yup!" and laughed.

Bill

I would be concerned more about those power spikes.

The reboot are the spikes you "see". What is
spiking the CPU more often that you "don't see"?

I've had other scanners in consoles next to radios, but I can't say I've ever seen any power effects. Still, the 536 is more sensitive to power spikes than older models for some reason. Likely they used a new control chip that does more at a lower cost, but isn't as immune. This applies to cranking the engine, too. I've seen that cause a reboot. I purchased a board that helps eliminate those spikes. I think it was mentioned on this list. I forget the name of the board offhand. It has power input, output, a adjustment, and a 3-digit numeric LED display.

I also have seen the scanner reboot when I start the truck. And I power the 536 directly from the battery-nothing between the battery and radio except a fuse on both leads. My leads I like to call it my bus) are 14 gauge, the battery is new and the vehicle charging system is good. So the scanner is seeing a drop in power from the battery when the ignition system is turning on. This drop is the only parameter that would show a delta. Apparently it's enough to cause the scanner to blink out and then reboot. But as long as the scanner plays while the engine is running I can live with (what I have believed) is the norm for the scanner. And there's no room to complain due to something I am doing the the power source (changing the input value both voltage and current. I've just thought of it as protection against unreliable power supplies.

Actually it can happen, depends on the output level of the transmitter involved and a few other factors. Of course Uniden is not likely to tell us what the design of the receiver front end is, perhaps they will tell us how much it can take before it fails.

In older designs, the receiver front end could be very sensitive to induced voltages and failures would occur even if the receiver was off. Basically this is because the the voltages induced on the antenna by a close proximity transmitter don't care if the receiver is on or not.

In most modern designs the front end components involved are not as sensitive, along with the design allowing for protection of of the components.

I regularly use a two-way near the scanner antenna and have experienced no failures, still I stay below 100W. I don't think I'd like to risk 1500W PEP in close proximity to the scanner antenna.

Obviously you have never used a 536 in a mobile application. It is the _Most_ sensitive to power fluctuations piece of electronic gear I've ever worked with. If it see's a drop in voltage it's going to re-boot.

It's actually written into the firmware, that it will do that.

In the early versions of the firmware it had a problem where occasionally after starting an engine it would lose all audio. Uniden corrected that by telling it to reboot on voltage drops.

Mine is set up the same way in my Honda Accord. The person who helped me install it and wire it up has a lot of experience and used to do vehicle install on police vehicles. Wired directly to the battery and, like yours, fused at both ends. Mine also blanks out and reboots if I start the car and don’t turn the scanner off first. Funny thing, though, my Yaesu FT-7900, which is also wired to directly to the battery, does NOT do that. It doesn’t even flinch.

Yesterday I turned on my BCD536, which is mounted in the dash of my car. The light turns on and displays the banner with Uniden BCD536 and all of that. But it stopped there. I turn the power switch off but the light will not go out nor will the message go away. I have had this problem on my 436 but all I do is take the batteries out then reinstall and the radio boots up.

I would remove the power except, like I said it is mounted in my dash. Is there a reset button or a key sequence to cause it to reboot without removing the power.

Thanks,

Earl

No reset. You can try removing the Micro SD card and see if it
will power and de-power then. You might have a corrupted card.

Every instillation is different. It could be something as simple as different locations... external influences can be a big factor... just too many variables. It's the old adage "Your results may vary". Boy, doesn't that cover a multitude of sins!

But it is what it is. We work the problem until we settle on a fix or partial fix we can live with.

If you can get to the inline fuse, remove and replace that. That will turn the power off. Your larger problem is a corrupted SD card. That needs to either have the user data cleared and rewritten or the card needs to be reformatted, user data cleared to prep it, and then rewrite the data to the card.

It's a common, if somewhat annoying, issue with the SD cards. It's the reason that I keep a spare SD card with the data written to it.

I had that happen, once, where the scanner just wouldn't "turn off". Yes, I took the card out, put it back in, and that seemed to "fix" it. Not sure why. I also had a "corrupted SD card" message, but it took a few "take out and replace" tries and then it worked just fine. Weird.

When a mobile electronics device resets during car-starter operation it means the battery isn't providing adequate voltage during high-load cranking. This can be caused by a weak or old battery, a worn-out set of starter commutator brushes or bad wiring between the battery and resetting device. From my experience, in this particular case, it's got a new battery so let's rule that out. However, I have to wonder at the age of the vehicle since it has a new battery. The charging system and/or starting system is suspect in either under-charging the battery or drawing way too much current during cranking, allowing voltage to drop enough to reset the scanner.

If I were the original poster, I'd be taking the vehicle in to have the charging system and starter tested. If it's old enough to need a battery replaced, it's probably also in need of a starter or alternator IMHO.

Not really, I have known several people with one year old and under who have had to replace batteries. The makers are buying cheap batteries as a cost cutting measure to make more profits. Also they are using smaller wiring, less than optimal for added electronic gear.

Bob,

The vehicle's electrical system's condition was known to be in good condition. Of the four radios mounted in the console (Icom 2820, a 6 meter and a 220 MHz transceiver, a Uniden BCD536) only the Uniden scanner reacts adversely. That's not to say I find fault with the scanner. I don't. I also do not find fault with the electrical system either. It's been certified as well within accepted parameters by a reputable service shop. We have all observed that when starting a vehicle, interior lighting, headlights, etc. will dim slightly so your understanding of current and voltage readings during the engagement of the starter motor are correct... and can very well be the cause of my scanner "blinking out".

As I stated, it's an accepted behavior of the scanner. Uniden recommends the scanner be turned on and off using the provided switch on the radio. Further, they would advise against disconnecting the 12 volt power cord to turn off the radio and then reconnect to turn the radio on. It's just not the engineered intended method.

So that's it. The various points as stated are correct. As I stated previously, it is what it is. There is no fault here.

Bill

I agree with Bob. Part of the testing should be a Load test of the battery. They will do that as part of your electrical system checkout.

From: rhyolite@...
Topic: 4174 Message: 4174

I have a brand new (actually built a year ago) 536HP that Amazon delivered and I am unable to receive anything on the Seminole County FL system unless I am in the Discovery mode. Being a "neophyte" I am suspecting that either the control channel assignments are wrong or the P25 threshold is off having some difficulty with LSM..

I did update the firmware and DB using Sentinel;;

Any thoughts?

Hi Bob,

Thank you for your insight. The radio is wired into my car to make use of the power interrupt during starting so to not over voltage the radio. The battery is pretty new and this is in my Toyota Rav4.

Not quite sure what happened; but one thing obvious is that the power switch on the front of the BCD536 is not a hard power. Meaning that the power does not get disconnected by the switch, it is more of a software switch. Because my radio would just not turn off no matter the position of the power switch.

I wound up taking apart my dash to remove the power cord. Once replaced it powered up right away.

Earl

Subject: Re: [BCD536HP] BCD536 won't turn off or power on

When a mobile electronics device resets during car-starter operation it means the battery isn't providing adequate voltage during high-load cranking. This can be caused by a weak or old battery, a worn-out set of starter commutator brushes or bad wiring between the battery and resetting device. From my experience, in this particular case, it's got a new battery so let's rule that out. However, I have to wonder at the age of the vehicle since it has a new battery. The charging system and/or starting system is suspect in either under-charging the battery or drawing way too much current during cranking, allowing voltage to drop enough to reset the scanner.

If I were the original poster, I'd be taking the vehicle in to have the charging system and starter tested. If it's old enough to need a battery replaced, it's probably also in need of a starter or alternator IMHO.

That is correct. The power is controlled by the Micro in the last
several models. I believe this is true of all the DMA scanners.

Did you try removing the Micro SD card?

If it works in Discovery mode, it's not an LSM decode issue.

It would be a Quick Key issue (Site QK not enabled, or Department QK, or
those items AVOIDed).

I would try ID SEARCH. Maybe the IDs are simply not programmed in.

What is the database date in Sentinel?

(and you have written it to the scanner, right?)

The 536 is very sensitive to any voltage fluctuations, that's just the nature of the beast. See my previous post "Antenna Spacing" for more details. Rebooting on an engine start is "Normal" not an indication of a problem. Not rebooting, might indicate running old firmware.

From: Evan Platt
Topic: 4179 Message: 4179

So in quick search, I enter for example 144.9375, however the 536 displays 144.9400. Is there a way to change this? Looked through the manual, maybe I missed it....

Thanks.

A friend of mine designed a built a DC-DC boost transformer circuit for me. It prevents power cycling during engine restarts with the scanner on. We tested it with an input voltage as low as 9VDC. The problem is the cost of the device. He's in the business so got a sample at no cost, which made it feasible to build.

Doing some research, there are some less expensive units available on Amazon that would likely do the job. Someone would need to wire the leads in and find an appropriate size project box.

Since I put that in, I've had no problems with the scanner restarting on engine start.

First thing to check is the "Service Types" and turn on the ones you
want. The default settings often have the active types turned off.

You and Bob are incorrect. Power cycling has been an issue with the 536HP since the scanner was introduced. The problem that the OP has is not related to restarts although it has happened on restarts. I've also had it happen when the scanner was turned on with the engine running.

In my particular case, I just recently got a new battery. And my car receivers regular maintenance, during which the charging system, starter, etc., are all checked and confirmed to be within standards. Therefore, it has to be the radio, itself, that is what causes the rebooting of the scanner. It must be in the radio’s circuitry that this is what is supposed to happen.

Yes, that will work. As you know. It looks complete with filter caps and
a variable resister to adjust the input voltage. Mine doesn't have the
LED display, but since it's buried under the console in my truck, it
doesn't matter. What mine does have, and I'm going connect it when I get
a couple of warm days, is an input to turn the device on. Even though
the current draw isn't much, it's enough to kill the battery if the
truck isn't started for two weeks. Which is what I did of course.

I think there are a few others on Amazon as well, but any of them should
work.

Topic: 4179 Message: 4197

No - that's what sets the "auto". There is no "auto" in each segment
since there is no standard bandplan in most any band segment -
especially 2M where you have 15 kHz and 20 kHz channel spacing
throughout the band (and apparently 7.5 kHz now as you have there).

Of course, if you set it to 7.5 kHz, some 20 kHz spaced channels will be
"off". I'm assuming you want to hear a mode that requires better than
2.5 kHz precision (which is how far you were originally off).

From: MCH
Topic: 4165 Message: 4198

The potentiometer adjusts the output voltage.

One caveat for those searching - make sure the model you select covers
12V on input and output. (the one I posted does, but so do others)

True, you don't need the display, but it's nice for setting it up and
you can disable the display on the model I posted by removing a jumper.

Yes, even microamps will kill a battery over time.

You're right about the potentiometer adjusting the output. The we used a resister to do that. The input range is fixed. Thanks for the correction.

The only problem with using one of those is they are switching supplies, and if they don't have good filtering and shielding they can make the scanner deaf. Many don't, but I have run across a those that when turned on a receiver or scanner in close proximity will either go deaf or pick up far more interference.

While I haven't verified the exact cause for the deafness, I think it related to broadband hash getting into the IF. In many cases you don't receive it, but it can vary from not hearing distant stations, to just barely hearing close ones.

So if you do go this route, and you notice a loss of reception keep that in mind. you may need to add some extra filtering and possibly shielding to it.

(Unrelated) I had a Garmin GPS-75 that whenever it was turned on I couldn't receive VHF on my scanner, or my commercial VHF 2-Way. I still haven't figured out what hash that thing was putting out, just knew I had to turn it off if I wanted to hear anything on the air.

Thanks ever one for the replies. I did forget to mention that this is on a 40 foot tower but I figured if anyone would look up the antennas I mentioned they would see that.Thanks again.

On Thursday, December 15, 2016 7:27 PM, "fred163@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

I have my scanner antenna (Diamond D130NJ) mounted about 5 feet from my CB antenna (Solarcon I-MAX 2000) operating at 5 watts, and 10 feet from my vertical dual band antenna (2 meter/ 70cm) operating at 50 watts. The dual bander is a Diamond X200A. Picture looking at a pitchfork with three prongs. The scanner antenna is on the right, CB in middle and dual bander on the left.

My question is, "Is my scanner antenna too close to the other antennas?" Scanner is a Uniden BCD536HP. I do not want to overdrive the input of the scanner.

Thanks

Gary,

Get a Chargeguard off ebay. I've gotten quite a few some as low as $10. Go for the yellow ones, they are newer. It will control power off and on with the ignition and let you run the scanner for a predetermined time after you turn the ignition off, say 15 minutes or so. It will also turn the load off at about 11 volts so you have enough power left to start. You also get a 3-5 second turn on delay. This is for most of the vehicle electrical system, giving it a chance to calm down. Connect the ground wire, cut the power lead from the battery to your radio stuff and put the chargeguard in line. All done except setting the delay time off.

Bill in Bubbaville

Subject: Re: [BCD536HP] BCD536 won't turn off or power on

Yes, that will work. As you know. It looks complete with filter caps and
a variable resister to adjust the input voltage. Mine doesn't have the
LED display, but since it's buried under the console in my truck, it
doesn't matter. What mine does have, and I'm going connect it when I get
a couple of warm days, is an input to turn the device on. Even though
the current draw isn't much, it's enough to kill the battery if the
truck isn't started for two weeks. Which is what I did of course.

I think there are a few others on Amazon as well, but any of them should
work.

My car has Auto Stop/Start (at stop lights, etc) and even wired directly to the battery, the 536 (without the DC converter) reboots on every car start. This device solved the problem. I did have to change the jumper setting for the lower voltage mode (8-16v). No noise or other problems that I've been able to detect. It has been installed for about 10 months now.

...further evidence the 536 is not designed to handle vehicles that routinely shut down and start up. Either by design or practice. It's no fault of any vehicle charging system or the radio itself. It's simply a matter of design. Uniden should take this discovery into account however. Because spending between $60-90 for an added device to protect against this rebooting isn't what anyone bargained for when buying the scanner for mobile applications which is an acceptable advertised use (as advertised). I use a unit I purchased from Powerwerx. It does and cost about the same. However, I am on my third one... they have a one year warranty and the first two died just before the years coverage was up. Next time around I'm trying one of the other two I have seen in this thread.

I'd like to hear what longevity you are getting from the Chargeguard units and the one in the BMW.

Or you could go with the $10 ballpark option I posted. Or simply use common sense operation and don't turn on the scanner until the vehicle is started. The starting voltages are not good on any electronics. If you really want to get fancy, install a second battery for electronics that will prevent drain of the battery used for starting the vehicle.

And of course all this is not needed when used in base operation. Still, for base operation a UPS is a good investment (again - for any electronics). Go with the pure sine wave version for best performance. Not only will the UPS protect the electronics, but it will allow operation during power outages.

Cranking an engine requires massive current. There is usually a voltage drop across the board, sometimes down to 6V for a large engine.

Name one company that sells a radio or any other device with a CPU that can tolerate too low a required input voltage for any length (during starting) by design. Many can still work down to say 9V (like my K3, but it gets ugly on transmit), yes, but generally speaking the more complex the device, the more it has to do and that means a faster, more powerful CPU that draws more energy and is natively less tolerant of voltage sag. The 'fix' is to add a super cap on the input, raising the price substantially, which customers won't pay.

In other words, to say that the 536 has any issue here isn't accurate. If the voltage sags for ANY reason, the 536 isn't being given the voltage it requires, which isn't the fault of the scanner OR the design. Give it clean supply, no problem; so the 'fault' is in the supply not the scanner.

I can start my diesel pick up truck (if ever there would be a starter voltage sag, that'll give you one) with the scanner active, no problems at all. So one could say it's 'luck of the draw' or that some electrical systems are superior to others; it is not the fault of the device it's not being fed as required.

The REAL issue is that if a power off restart happens without the prior graceful shutdown, chances of a hashed SD card rise quickly (another reason to use a super cap, it would allow a graceful shutdown at ALL times).

Merry Christmas,
Rick wa6nhc

Installing a second battery involves installing a battery isolate if you are going to do it correctly. We used those extensively in EMS and they aren't cheap. Of course we ran up to four batteries, so it was complex and expensive.

But I digress.

I agree that you don't need to spend more than say $20.00 for a DC-DC transformer. In addition to the one you linked to, there are all sorts of them on Amazon.

For the 536HP, output doesn't have to be more than 3 Amps maximum. These scanners really draw next to no current.

It would have been better for Uniden to build that sort of thing into the scanner, but it's not a huge deal.

Thanks anyway Joe,

The point is we don't want to turn it on and off manually... rather have it work like the am/fm radio, or any other factory supplied option. We have the means to do this without harming the radio and are taking advantage of it. So much for the "common sense" approach of manually turning the radio on and off. (I have added the automatic option because I'm not infallible. I've been known to leave something on and end up killing my battery. So when I researched the question I included the opposite side of the coin, adding the ability to automatically turn the radio on also.)

Would I have been happier if Uniden had engineered things differently? Yes. But I knew what I was buying (having owned the previous models) and accepted it. They make a great product. If they didn't conform to the vast public opinions they'ed go out of business and I wouldn't be able to buy their latest and greatest offerings! And yes, I wouldn't be able to complain about them either!☐

Bill

And of course all this is not needed when used in base operation. Still,
for base operation a UPS is a good investment (again - for any
electronics). Go with the pure sine wave version for best performance.
Not only will the UPS protect the electronics, but it will allow
operation during power outages.

Topic: 4165 Message: 4210

For years I've lobbied for an ignition sense input on these scanners. It would be trivial to do (and would require no hardware change on the 536 - only a firmware addition *). That would solve much of the issue.

I suspect the change is that the micro is now controlling the power, and that may be browning out. In the past, who knows what effect this would have had, but now that the power is controlled by the micro, it results in a reboot.

Of course, maybe this cures any issues with spikes that may have been hidden in previous models.

I think the best solution is for Uniden to add the "power booster" circuit on the input, but it may increase the price slightly ($5 to $10). I wonder how many would balk at that.

* If the micro is browning out, it's possible that the ignition input might require a slight hardware change, but the primary purpose of the ignition input is to switch the scanner off when the ignition is not on - not to prevent that issue. Since the scanner would be off anyway, the brownout issue may "go away" and the hardware mod may not be required.

How would it differentiate between that entry and a typo of 144.935?

But, I like your suggestion for a future improvement - ignore the step size and just use what was entered as long as the synthesizer can tune there. Of course - that may be the issue - the step needs set before the entry is used. Still, there should be a way to do that "at the time" then use the entry.

4212. Re: [BCD536HP] BCD536 won't turn off or power on

Yahoo group: BCD536HP
Date: 2016-12-20 18:54:48 UTC
From: Gary Saffer
Topic: 4165 Message: 4212

In over 40 years of installing and working with two way radios, ham radios, and scanners, I've never had a radio that power cycled on engine start. People have reported this issue with new batteries in vehicles with known good charging systems.

I've had every programmable scanner from the 760XLT to the 536HP as well as a number of RELM scanners in my cars and trucks since the mid 1980s. I've never had one restart on engine start until now.

This is a Uniden 536HP issue, not a charging or starting issue with the vehicles.

If you're running a diesel with two batteries, you likely won't see this issue, but that doesn't mean it doesn't exist.

How many previous models had power that was controlled by the micro instead of manually switched power? I believe the 536 is the first Uniden model with such control, so X years of experience does not apply.

Even new batteries and properly working charging systems will dip power on start. The only difference involved is that the 536 will black out at a higher voltage than previous models. That change may have been made to protect the SD card. Again, the 536 is the first Uniden model with an SD card (which many users have demanded in recent years).

The saying "this is not your father's scanner" applies very accurately.

All that said, if a $10 booster can fix the issue, Uniden can build that into the scanner. It might raise the price $5 or $10, but again that is what people seem to want to see (a built-in fix). It stinks that those who don't need it will pay for it as well as those who do, but that seems to be what the vocal minority want. Personally, I would just as soon only pay for a booster on the scanners that need it since I still come out ahead by buying it myself over the built-in option.

How about a small rechargable battery, such that when power is disconnected, the battery provides enough power to do a clean shutdown of the scanner... :)

Couldn't that be done with a cap???

I agree completely. My point is that it's not a vehicle problem, it's a scanner problem. I would also guess that Uniden could build the power conditioner in for less than $10.00.

They didn't, though, so it's up to the users to figure it out. I just got tired of having to power cycle the radio when I was in and out of my truck several times a day for just a couple of minutes.

I'm also fortunate to have a friend who has been working with electronic devices since the late 1950s. :)

From: MCH
Topic: 4165 Message: 4217

I would not say it's a problem in either.

You could also say it's a vehicle problem in that they let the voltage dip so low. You could say it's a scanner issue in that they don't provide a booster to hold the voltage. Who's right? Both.

I agree on the $10 or less - hence my estimate of an end price increase of $5 to $10. But, most of my 536s do not suffer this issue, as they are not subject to the same voltage dip. I see it as a savings on those that don't have the issue.

But, where I do have the issue I solved it for around $10.

I still want the ignition control. :-)

Joe M.

That wasn't the original intent of where this thread was going but as long as you brought it up... how do you propose to shut down the radio as the manufacturer intended with a battery? Some sort of battery operated bottle opener that will grab the on/off knob and rotate it? I'm getting this mental image of a Rube Goldberg mess. What's next? Solar Cells to recharge the batteries?

Yea, I'm starting to have some fun with this now. Time to settle back down.

Subject: Re: [BCD536HP] BCD536 won't turn off or power on

...further evidence the 536 is not designed to handle vehicles that routinely shut down and start up. Either by design or practice. It's no fault of any vehicle charging system or the radio itself. It's simply a matter of design. Uniden should take this discovery into account however. Because spending between $60-90 for an added device to protect against this rebooting isn't what anyone bargained for when buying the scanner for mobile applications which is an acceptable advertised use (as advertised). I use a unit I purchased from Powerwerx. It does and cost about the same. However, I am on my third one... they have a one year warranty and the first two died just before the years coverage was up. Next time around I'm trying one of the other two I have seen in this thread.

I'd like to hear what longevity you are getting from the Chargeguard units and the one in the BMW.

Bill

My car has Auto Stop/Start (at stop lights, etc) and even wired directly to the battery, the 536 (without the DC converter) reboots on every car start. This device solved the

problem. I did have to change the jumper setting for the lower voltage mode (8-16v). No noise or other problems that I've been able to detect. It has been installed for about 10 months now.

WOW!!! It's not like it would be an impossible task. A battery or cap coupled with Joe's ignition wire is all that is needed. While you may have poked a little fun at physically turning the knob to turn the radio off, it's really NOT needed. Don't believe me... go into the menu and set the auto shutdown and see what happens when the time has elapsed.

Dewey

...further evidence the 536 is not designed to handle vehicles that routinely shut down and start up. Either by design or practice. It's no fault of any vehicle charging system or the radio itself. It's simply a matter of design. Uniden should take this discovery into account however. Because spending between $60-90 for an added device to protect against this rebooting isn't what anyone bargained for when buying the scanner for mobile applications which is an acceptable advertised use (as advertised). I use a unit I purchased from Powerwerx. It does and cost about the same. However, I am on my third one... they have a one year warranty and the first two died just before the years coverage was up. Next time around I'm trying one of the other two I have seen in this thread.

I'd like to hear what longevity you are getting from the Chargeguard units and the one in the BMW.

My car has Auto Stop/Start (at stop lights, etc) and even wired directly to the battery, the 536 (without the DC converter) reboots on every car start. This device solved the

problem. I did have to change the jumper setting for the lower voltage mode (8-16v). No noise or other problems that I've been able to detect. It has been installed for about 10 months now.

Well one of these might work..
http://www.prodctodc.com/automatic-buckboost-module-solar-power-panels-335-to-1230v-converter-power-supply-p-120.html#.WFokxlwUNbo
I don't think the scanner draws over 2 amps at any time.
Set the Constant Voltage to 13.2 and the constant current to wide open.

Joe,
I'm a thinking you didn't read what I said, it DOES have ignition sense in the firmware, that tells it to reboot. They did that to overcome an issue where when the voltage sagged too deep it would loose audio output until it was rebooted. You have to find one that has the first version of firmware to confirm this, but it's true. The early firmware did not reboot, and sometimes the scanner worked fine other times you would be wondering why it go so quiet.

I know that the HP series and x36 series are entirely two different animals, but what are the chances of having the two share the same Sentinel database? I have all (436, 536, & HP-2) for different reasons, and trying to keep the FLs for the two different Sentinels is a royal pain. I know I could unload the HP-2 for another 536, but as mentioned, I have the HP-2 for specific reasons. Hey Uniden... any chance that the two Sentinels could share one database, which the HP-2 side would just ignore OpenSky, DMR, & QuickKey programming so FLs wouldn't be such a pain when trying to keep the same FLs for both? If not really doable, maybe a converter that could read the x36 database FLs and strip the extra fields for importing into the HP-2 database?

While I've never tried it (with DMR data), you can use the x36 Sentinel HPE Export function and import that into the HP Sentinel. All that would need stripped are the DMR entries. The import already correctly ignores the QKs, Alert lights, and other features that the HP does not support. The only one I'm not sure about is the DMR and ProVoice. But, you could always put that on a Custom Service Type and just disable it if it is not ignored on the import.

Nope… tried this, and it didn't work. First I pointed HP Sentinel to the x36 Sentinel database directory, and everything appeared to read correctly (keep in mind that I already had the same FLs in both Sentinels). However, to be sure it was working, I then deleted ALL of the FLs in HP Sentinel and did the same thing… no dice, no FLs were recreated. I then tried Joe's suggestion of exporting the x36 Sentinel FLs as HPE files, then importing them with HP Sentinel, and that appeared to work without flaw. The only problem here is that the FLs must be exported and imported one at a time, multiple FLs cannot be selected using the shift or control keys. I live in the Metropolitan Washington DC area, and can be in my choice of DC, MD, or VA in 10 minutes, so I have 29 FLs that I use, so this could get painful. Oh well, my Christmas wish (desire) for Uniden that the two Sentinels use the same database still stands.

Thanks to all,

Dewey

Doing it this way imported all of my DMR entries. The DMR systems were converted to conventional, but it was easy to just go in and delete those systems since they're at the top of the FL "trees". I could just highlight the FLs in each of the Sentinels, and see "at a glance" what I needed to delete from the HP Sentinel. The hard part was the DMR single frequency entries that were contained in the conventional systems. Those required some manual searching since I needed to drill all the way down to the channel level to identify and get rid of them. While that is a pain, it does help with my desire to keep the FLs in both Sentinels synced with each other. As mentioned before, my situation is unique due to living in the DC area. I have FLs for the various jurisdictions around me, which allows me to quickly navigate the systems in manual and scanning modes. If I didn't program this way, it would be a huge pain trying to quickly navigate the various jurisdictions from the main database (I leave MD, and drive through DC to VA and back every day just going to work). I posted a screen print of my FLs at https://drive.google.com/file/d/0B1gvG57ZJDflTWloaXNqZnlEbU0/view?usp=sharing and believe it or not, I have actually heard all but 3 of those FLs from my home antenna. The three that I can't hear from home are still a part of my frequent travels.

Thanks again,

Dewey

As I suggested before, just change the Service Type of your DMR channels to an unused Service Type (such as Custom 8), then disable that Service Type on the HP-x. They will still be there, but won't be scanned.

While that sounds good, it is actually more work than finding and deleting the DMR entries. Finding and deleting the DMR entries from the FLs imported into the HP Sentinel is a one time event per import, per system. Giving the DMR entries their own Service Type means duplicating several of the existing service types that have to be remembered when they are turned on/off on the x36 when scanning based on service type.

4231. 536, have to re-enter date and time

Yahoo group: BCD536HP
Date: 2016-12-23 11:12:29 UTC
From: tvnews
Topic: 4231 Message: 4231

In the last couple of weeks one of my two 536 radios in my van needs the time and date re-entered every time I start the van. I have two of the radios mounted and both weird to the same point with constant 12 volts directly from the battery. When I start the van both radios are turned off. After the van is started I turn both radios on. One radio powers on fine but the other radio needs me to enter the time and date. This happens every time I start the van. The radio that keeps loosing the settings also has the light on the display dimming. It seems the display is wearing out. Since I have the radios mounted together it is very easy to see the problem radio display is wearing out. I bought both these radios in the very beginning when the 536 started shipping. And both radios have been back in the past for update/correction.

I have three 536 in the office that do not have any problems.

This is a known issue with the x36HP scanners. Uniden has issued a recall for the Real Time Clock (RTC) issue and will also replace dim displays.

https://www.uniden.com/product-information/bcdx36hp-repair-campaign

Put a note on the scanners requesting to have the dim display repaired and asking to check to see if the scanners need the "headphone jack" repair done.

Uniden will email you a shipping label (no cost). They will then repair and return the scanners to you at no cost. Turn around time can vary.

4235. Changing frequency or scan group remotely

Yahoo group: BCD536HP

From: vvcjksvhcaetzocxt4erpdezg7qkwn36awobmbdc@...
Topic: 4235 Message: 4235

Hello. I wanted to verify a capability of this scanner regarding the WiFi capability and the program that controls the unit.

If I have the scanner connected to a computer which (A) is capable of running whatever software is available for this model and (B) is connected to the internet, will I be able to remotely change the frequency or group that is currently scanning to another frequency or group that is programmed into the unit?

I can screen share and remotely access the computer, but my hope is that I can identify the scanner if it is connected to the internet and change the freq/group. Any info would be appreciated.

Thanks,
Alex

I'd reccomend Proscan. http://www.proscan.org/ . Awesome piece of software.

4237. CC only vs cc and all voice channels?

Yahoo group: BCD536HP
Date: 2017-01-02 03:33:08 UTC
From: Evan Platt
Topic: 4237 Message: 4237

So if I recall, I can put just the CC's in the 536, correct?

So I'm troubleshooting some issues with my 536 - missing some traffic.

Looking at the system, I see (and this is all downloaded from RR via Sentinel), all the channels are in there, data and voice.

Can having all those channels in cause any problems?

I don't know how the scanner works, but it's a P25 Phase I system - can the scanner maybe be stopping on a voice channel and missing the data channel and thereby missing traffic?

Any reason to keep the voice channels in there?

Thanks :)

4238. Re: [BCD536HP] CC only vs cc and all voice channels?

Yahoo group: BCD536HP

For P25 systems, the scanner will only ever use the control channel(s), so having the non-control channels in there will only waste space and could interfere with proper operation - especially if there is a co-channel P25 system in range.

So I should remove the non CC channels? If it can cause problems, why are they downloaded in Sentinel?

Because Sentinel downloads all the frequencies listed on RR.

And since the scanner does not have the ability to use the voice-only channels, I would remove them. As I said, there is the potential for interference which may be exactly what you are hearing.

Ideally, it should not matter, but as P25 systems become more popular, it is an issue that will only worsen. I know a user in the Indy area who now has issues since a statewide system converted to P25. The "wrong system" is being tracked on his local system's frequencies and he is hearing "new talkgroups" that are not from the system he was intending to monitor. There is an easy fix, and we can only hope Uniden adds it to the firmware.

Ok.. Hmm.. Any suggestions on what to try? I'm still missing a LOT of audio. Looks like I have a full signal. Control channels are correct, talkgroups are correct. I'm now missing entire conversations.. Here's the system. Nothings changed, and still receving it on my UNication pager and Unity XG-100P radio.

Yeah, something is definitely not right. I was getting "There is a problem with this drive" when I went ot USB mode, so I formatted the SD card and cleared user data and rewrote the database. But still missing much of the traffic.... Something's not right :(

From: Milton Engle
Topic: 4237 Message: 4243

Notice the word SIMULCAST in 6 of the 8 the frequency listings. IF you have full signal and are not receiving anything, you are probably dealing with simulcast transmissions.

In a simulcast system (multiple locations transmitting the same information at the same time) the only thing that you can do is to try to minimize what signals your scanner is receiving in hopes of only hearing just one location. This may take the form of as little antenna as possible or even no antenna, depending on where you are and where the nearest transmitter is; or a directional antenna; or nothing may work.

Scanners usually fail to decode properly in simulcast environments unless they are:
1)very close to a single transmitter site thus insuring that just signals from the site completely "capture" the receiver; or
2)they are far enough away from the system so that they only receive signals from one site.
In all other cases you will experience varying amounts of degradation from barely noticeable to complete failure to receive.

In P25 digital simulcast, all the sites are transmitting the same information at the same time. The signals from multiple locations will have traveled different distances from the respective transmitters to the receiver and will arrive at slightly differing times. If the amount of delay between the arrival times is small, then detected data sent to the Digital to Analog conversion process that takes place in the scanner will probably still see what it recognizes as valid data and generate corresponding analog audio. However as the amount of time delay between the signals increases, the detected data will begin to be distorted to the point where it is no longer seen as valid data and the Digital to Analog conversion process in the scanner will ignore the invalid data, thus no audio out of the scanner.

The scanner is not engineered to deal with simulcast environments; in most cases the scanner is not using the preferred method of detecting and generating user audio but rather one or more "back door" approaches in order to avoid patent violation issues and/or high cost components. The portable radio is designed to function in simulcast environments, the pager also reportedly works well in simulcast systems; but they both cost much more than any scanner.

It is possible that the system has had additional transmitters added to one or more of the simulcast zones.

It appears that two of the sites (7 & 8) may not be simulcast systems so I would remove all the other sites and everything except the control

channels for those two sites and see if you can receive from just those sites.

Good luck, there are no easy answers.

Milt

Good question. All they do (the non-control channels) is take up space in the radio. If we don’t need them, why do we have them?

The Control Channel feature (if available) only scans the CC frequencies. Nothing is missed. The only question I have is IF the X36 rigs have a CC feature. I will look today.

Bill

The "control Channel" thing may not be an option on the 536, 436... don't remember for sure. But on previous models it was a feature. Just eliminating those frequencies, what you call talk channels (without a "Control Channel" feature) may not work on X36 models. Need Joe M to verify. On those previous models (396, 996) you downloaded the entire system from RR and selected "CC". I have to look today to see if it's possible with the X36's. I do remember locking out all sites that were not close however. I live in Ct., the Ct. State Police is the system I have been talking about.

Would the locking out of all but one site eliminate the simulcast problem?

On Jan 1, 2017, at 11:53 PM, Mark Lassman kb6kgx@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Good question. All they do (the non-control channels) is take up space in the radio. If we don't need them, why do we have them?

It could be that the CC feature is not available.

On Jan 1, 2017, at 11:41 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Yeah, something is definitely not right. I was getting "There is a problem with this drive" when I went ot USB mode, so I formatted the SD card and cleared user data and rewrote the database. But still missing much of the traffic.... Something's not right :(

From: MCH
Topic: 4237 Message: 4251

It is, but only on Motorola systems. P25 systems have never had that option on any model (at least any DMA model) since they are always "control channel only" all the time.

4252. Re: [BCD536HP] CC only vs cc and all voice channels?

Yahoo group: BCD536HP
Date: 2017-01-02 15:49:32 UTC
From: MCH
Topic: 4237 Message: 4252

No. Simulcast systems use the same frequencies on multiple sites. You
cannot lock out one simulcast site without locking out them all. You
cannot "not listen to a frequency" while still listening to that frequency.

Note that this is different from locking out different zones for
simulcast systems that use different zones for different parts of a network.

I believe it was mentioned that the system in question has some
non-simulcast zones as wwell as some simulcast zones.

My solution is to use a lower gain antenna. I've rarely had issues on my
local simulcast system doing that.

Joe M.

Ok. I see this listed under "Main Features". But when I look thru the manual I am not seeing where it's addressed; Control Channel Only Scanning – With Motorola trunking frequencies, you do not have to program voice channel frequencies.

I don't think that's it. Very strong system. I'm nowhere near being like 'fringe' area of it. I could probably receive it with no antenna. Signal strength was showing full signal the whole time...

I have had the same. You really cannot rely on the signal strength. I have one part of the Indy system that always shows full strength yet only hear anything when when I drive a half mile north of my home. Even tried a yagi antenna and nothing with full strength showing. So, it well could be that.

One possibility is that they rotated to a new or currently unknown control channel which will cause you to stop receiving. If the happened, the explanation for the suddenly working again is that the rotation came back to a programmed control channel.

so with no changes on my end being made, I started receiving the system again... Late last night. And so far today it's been fine.... (Well I should say I did remove the voice channels, but after that it still didn't work, it was sometime later that it worked...)

Sounds like a coverage or interference issue.

Don't believe that's it.. I have a Unication pager and a Unity XG-100P HT programmed the exact same, and they were both receiving the traffic fine. Actually the XG-100p only has one site I believe, but the Unication has all the control channels.

Yeah, compare a scanner to more dedicated gear....they are completely different!

Just because others didn't suffer from the interference, or perhaps have
better receivers does not mean those could not have been the issue.

I have seen two Motorola radios in virtually the same location have
different reception.

Shooting a high school basketball game one night I was next to two officer and neither received a fire call while my scanner did. I told them they had a call and then fill them to the scene ☐
They and dispatch were surprised about that one.

I dunno... For that extended period of a time - it was a good few hours (I checked my activity log, using Proscan). I could imagine maybe a brief period, of a few minutes.. But a few hours? Like I said, reception shouldn't be an issue. Very strong signal, I'm right in the middle of reception.... I guess it's not possible it was some bug in the scanner. It seemed to resolve after a few reboots and a wipe of the sd card..

...the definition of simulcast interference if
this is a simulcast system we're talking about.

It actually could be a symptom of a card
starting to go bad. I would try replacing it.

How would I tell if it's a simulcast issue - or system? I could look at a new card. Not too expensive.

Actually even non simulcast can do it. I have a schedule now where every three months I clean the card off, format it and reception improves usually.

It can be days. There are some parts of Indy they never hear a peep yet get full strength test gear. Some areas just have too much RF and others things block it. And, as I said, I lose Indy all the time, and still have full signal. It can be like that for days.

Ok, so refresh my memory.. Speed of the sd card only comes into play on startup / shutdown, right? Any reason not to get this - 16 GB class 10 - http://amzn.to/2iJzfi2 ...

That's what I use. The class 10 last much longer. They seem to handle the constant writes better. The speed helps at all times from what I have seen.

From what I have noticed it doesn't change scan speed, but write speed, quicker writes which leads to fewer issues like corruption of data. It also depends on how long you have record time set as well.

OK. I was specifically referring to initial load time of systems.

4280. Re: [BCD536HP] Control Channel Only - The RadioReference Wiki

Yahoo group: BCD536HP
Date: 2017-01-03 14:18:48 UTC
From: Uniden UPMan
Topic: 4250 Message: 4280

Control Channel Only mode is the only mode the scanner has, thus no need for an option to turn it on/off. Having the voice channels will very rarely cause any issue. More often, a channel tagged as voice only will be used as a control channel. If the freq is not programmed into the scanner you lose all scanning on that system. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

The odds of a voice channel being used by another system are much
greater than the odds of a voice channel being reassigned as a control
channel. It would require every radio on the system to be reprogrammed.

It also causes delayed acquisition of the control channel should it be
lost, as the scanner will have to evaluate all those voice-only channels
which will not be control channels.

I have yet to see a system in my range reassign a voice channel as a
control channel. I have seen voice channels interfere with scanning
systems (or should I say scanning the correct systems).

Weather does NOT "greatly affect a P25 system. It may seem that way in windy situations but at worst the wind is pushing directional antennas out of alignment where they don't "see" one another on point to point relay links. Weather may SEEM to affect signal strength but it's really the poor maintenance of the system which allows movement during high winds. Sooner or later the agency will complain (usually when it gets worse) and your "weather" problems will disappear.

Bill

What I have seen most often is that the wind pushes system antennas "off vertical" which affects the transmitted (and received) signals.
This is especially true of fiberglass antennas.

Either or both.

If a card is going bad, it could delay writes and tie up the CPU with retries of the writes. It could also read bad frequency info (data) into the scanner. These could affect certain or all systems.

The card doesn't need to be bad, just cluttered . It's a noticeable difference after reformatting and starting with a cleaned up card.

I have multiple counties using the same CC on multiple systems. It's why I am having system issues as they use the same exact CC's and TGID's and the TGID's are completely different users. It gets confusing as to which system is being scanned. Both are P25.
The two systems both use one frequency 4 times within my range ☐

Bill, don't tell me weather doesn't affect it, it most certainly DOES. And I have heard both officer's on the road and dispatch say the exact same thing as well. I have watched this as far back as when I got my 396t. I have seen rain without any wind affect reception. Snow too. Even cloud cover. One system I only hear when conditions are just right, and it's always cloudy.
But wind affects things the most. And it's worse with P25.

True. Different causes - same result. Whether a cell is just corrupted
or bad makes little difference. If it's corrupted, I would just as soon
replace the card since it may be corrupted since it's bad.

If you don't believe weather affects radio propagation, ask anyone who
has satellite TV how their reception is in a bad rain or snow storm.

4293. Re: [BCD536HP] CC only vs cc and all voice channels?

Yahoo group: BCD536HP
Date: 2017-01-03 18:16:31 UTC
From: Bill Nolan
Topic: 4237 Message: 4293

From Bill, (that's me)...

I speak from a "physics" point of view. It seems the topic of weather affecting signal strength is from a "general point of view. Granted, a vertical antenna can sway in the wind, coming closer to the tower structure or mounting mast and allow a variance of interaction (which is sometimes corrected with a non-metallic tube in which the vertical radial is enclosed in. And said tube is held fast at both the top and bottom to the tower or mast. But mostly, this problem is addressed with that tube being made part of the antenna. It's rigid and holds its own in a wind storm. The antenna is made NOT to bend.

And rain or snow does affect signal strength, just as foliage, leaves on the trees. It's noticeable with satellite TV reception and correctable to a degree with a larger dish. But I can stand in front of a satellite dish and block the signal and I'm not the weather. It's something else that creates the problem. The weather just helped that something else to happen.

So, for the intended purpose of the discussion, the initial mention that weather affects signal strength, I say that weather does not affect our finely tuned systems directly. Rather it causes parts of a man made transmission facility to perform In a manner not intended as designed. That's one of the reasons why commercial installations cost so much more. They take things we would never bother with into account when designing the hardware and structures used.

Comments by those using the systems are a simple acknowledgment only that things seem to go bad when there is bad weather brewing. What they didn't say (but goes without saying) is the systems need to be weatherproofed.

Hope this helps. I know and freely admit I may be guilty of splitting hairs with the topic but I won't apologize for seeing things as they are and stating same. Physical laws are the one hard-fast set of rules in our universe. I tend to abide by them whenever I can. I've come to realize I get hurt every time I ignore them!

Bottom line, whoever built out those systems so grossly affected by weather, (there ya go, by using the term "affected by weather" I have defended your general point of view) from full strength to a signal below the noise floor, as mentioned, should be required to effect corrective actions. I would consider this is caused by incompetence on the part of the designers or the govt agency overseeing the project if the design team advised against it... wouldn't be the first time a buck or two was saved by cheapening the materials! So who pays for it is a whole other problem.

Bill

Oh I believe it.

New company I started at, we have 3 large TV's in our cafe - one on CNN, one on some other news station, the third on another news channel...

One day when it rained right after I started, the TV's were off. I asked why, and they said they have satellite, so when it rains they just turn the tv's off. LOL

Not easy, but if you see erratic operation is one way.

The most obvious way to tell is you see the "card error" on the screen.

Sometimes you can't tell. And sometimes reformatting will keep it from going bad too.

Even with full strength you can go from lots of traffic to none due to the weather. I see all the time with Indy. It could be raining or snowing and go from constant talk to zero and the signal strength stays the same. So you really can't use the signal strength to judge reception.
Also like the one system, it's four separate systems. The one has full strength and yet since it was installed I don't hear a peep out if it until I drive farther North. Once I am there and it's receiving it's non stop talk. So something is not working properly, and it isn't just one scanner, it's all of them.

From: Bill Nolan
Topic: 4237 Message: 4300

John,

It sounds like a system problem. Whatever system is causing you concern is the fault of the system, not your scanner. Because you say it's ALL of them.

System administrators do all sorts of things to pacify others that may have interference issues with the system you have trouble hearing, not all the time but just certain times of the day. Admins may change the way their antennas are phased, or switch them out altogether, use other antennas. I am not familiar with the systems in question but I have a suggestion... ask someone who has access to the history of the system. I always hit two or three places when I'm on the road. Radio Shack, an amateur radio store if there is one, and the local FD. All in search of the best current info for the area. The amateur radio dealer and the FD are probably the best for finding out who you can talk to that's knowledgeable about what's up with a particular system's quirks such as you have.

On Jan 3, 2017, at 2:58 PM, johnstark@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Even with full strength you can go from lots of traffic to none due to the weather. I see all the time with Indy. It could be raining or snowing and go from constant talk to zero and the signal strength stays the same. So you really can't use the signal strength to judge reception.
Also like the one system, it's four separate systems. The one has full strength and yet since it was installed I don't hear a peep out if it until I drive farther North. Once I am there and it's receiving it's non stop talk. So something is not working properly, and it isn't just one scanner, it's all of them.

Sent from my Verizon 4G LTE Droid
On Jan 3, 2017 1:16 PM, "Bill Nolan n1chu@comcast.net [BCD536HP]"
<BCD536HP@yahoogroups.com> wrote:

From Bill, (that's me)...

I speak from a "physics" point of view. It seems the topic of weather affecting signal strength is from a "general point of view. Granted, a vertical antenna can sway in the wind, coming closer to the tower structure or mounting mast and allow a variance of interaction (which is sometimes corrected with a non-metallic tube in which the vertical radial is enclosed in. And said tube is held fast at both the top and bottom to the tower or mast. But mostly, this problem is addressed with that tube being made part of the antenna. It's rigid and holds its own in a wind storm. The antenna is made NOT to bend.

And rain or snow does affect signal strength, just as foliage, leaves on the trees. It's noticeable with satellite TV reception and correctable to a degree with a larger dish. But I can stand in front of a satellite dish and block the signal and I'm not the weather. It's something else that creates the problem. The weather just helped that something else to happen.

So, for the intended purpose of the discussion, the initial mention that weather affects signal strength, I say that weather does not affect our finely tuned systems directly. Rather it causes parts of a man made transmission facility to perform In a manner not intended as designed. That's one of the reasons why commercial installations cost so much more. They take things we would never bother with into account when designing the hardware and structures used.

Comments by those using the systems are a simple acknowledgment only that things seem to go bad when there is bad weather brewing. What they didn't say (but goes without saying) is the systems need to be weatherproofed.

Hope this helps. I know and freely admit I may be guilty of splitting hairs with the topic but I won't apologize for seeing things as they are and stating same. Physical laws are the one hard-fast set of rules in our universe. I tend to abide by them whenever I can. I've come to realize I get hurt every time I ignore them!

Bottom line, whoever built out those systems so grossly affected by weather, (there ya go, by using the term "affected by weather" I have defended your general point of view) from full strength to a signal below the noise floor, as mentioned, should be required to effect corrective actions. I would consider this is caused by incompetence on the part of the designers or the govt agency overseeing the project if the design team advised against it... wouldn't be the first time a buck or two was saved by cheapening the materials! So who pays for it is a whole other problem.

Bill

The quoted text says otherwise. ;->

We both talked about it. Granted, you did mention it first.
In my defense, I wrote my reply before reading your post.
(not like we aren't both correct)

Joe M.

From: johnstark@...
Topic: 4237 Message: 4303

No Bill, it is not a system problem. It's nature and the low power used on P25.

Sent from my Verizon 4G LTE Droid

<BCD536HP@yahoogroups.com> wrote:

John,

It sounds like a system problem. Whatever system is causing you concern is the fault of the system, not your scanner. Because you say it's ALL of them.

System administrators do all sorts of things to pacify others that may have interference issues with the system you have trouble hearing, not all the time but just certain times of the day. Admins may change the way their antennas are phased, or switch them out altogether, use other antennas. I am not familiar with the systems in question but I have a suggestion... ask someone who has access to the history of the system. I always hit two or three places when I'm on the road. Radio Shack, an amateur radio store if there is one, and the local FD. All in search of the best current info for the area. The amateur radio dealer and the FD are probably the best for finding out who you can talk to that's knowledgeable about what's up with a particular system's quirks such as you have.

On Jan 3, 2017, at 2:58 PM, johnstark@earthlink.net [BCD536HP] <BCD536HP@yahoogroups.com>
wrote:

Even with full strength you can go from lots of traffic to none due to the weather. I see all the time with Indy. It could be raining or snowing and go from constant talk to zero and the signal strength stays the same. So you really can't use the signal strength to judge reception.
Also like the one system, it's four separate systems. The one has full strength and yet since it was installed I don't hear a peep out if it until I drive farther North. Once I am there and it's receiving it's non stop talk. So something is not working properly, and it isn't just one scanner, it's all of them.

Sent from my Verizon 4G LTE Droid
On Jan 3, 2017 1:16 PM, "Bill Nolan n1chu@comcast.net [BCD536HP]"
<BCD536HP@yahoogroups.com> wrote:

From Bill, (that's me)...

I speak from a "physics" point of view. It seems the topic of weather affecting signal strength is from a "general point of view. Granted, a vertical antenna can sway in the wind, coming closer to the tower structure or mounting mast and allow a variance of interaction (which is sometimes corrected with a non-metallic tube in which the vertical radial is enclosed in. And said tube is held fast at both the top and bottom to the tower or mast. But mostly, this problem is addressed with that tube being made part of the antenna. It's rigid and holds its own in a wind storm. The antenna is made NOT to bend.

And rain or snow does affect signal strength, just as foliage, leaves on the trees. It's noticeable with satellite TV reception and correctable to a degree with a larger dish. But I can stand in front of a satellite dish and block the signal and I'm not the weather. It's something else that creates the problem. The weather just helped that something else to happen.

So, for the intended purpose of the discussion, the initial mention that weather affects signal strength, I say that weather does not affect our finely tuned systems directly. Rather it causes parts of a man made transmission facility to perform In a manner not intended as designed. That's one of the reasons why commercial installations cost so much more. They take things we would never bother with into account when designing the hardware and structures used.

Comments by those using the systems are a simple acknowledgment only that things seem to go bad when there is bad weather brewing. What they didn't say (but goes without saying) is the systems need to be weatherproofed.

Hope this helps. I know and freely admit I may be guilty of splitting hairs with the topic but I won't apologize for seeing things as they are and stating same. Physical laws are the one hard-fast set of rules in our universe. I tend to abide by them whenever I can. I've come to realize I get hurt every time I ignore them!

Bottom line, whoever built out those systems so grossly affected by weather, (there ya go, by using the term "affected by weather" I have defended your general point of view) from full strength to a signal below the noise floor, as mentioned, should be required to effect corrective actions. I would consider this is caused by incompetence on the part of the designers or the govt agency overseeing the project if the design team advised against it... wouldn't be the first time a buck or two was saved by cheapening the materials! So who pays for it is a whole other problem.

Bill

Bill, don't tell me weather doesn't affect it, it most certainly DOES. And I have heard both officer's on the road and dispatch say the exact same thing as well. I have watched this as far back as when I got my 396t. I have seen rain without any wind affect reception. Snow too. Even cloud cover. One system I only hear when conditions are just right, and it's always cloudy.
But wind affects things the most. And it's worse with P25.

From: Uniden UPMan
Topic: 4250 Message: 4305

If it is actually fully tagged as VC and CC. I have seen quite a few sites listed with none of the freq's tagged as a control channel. If we ignored all those, scanning would be problematic. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Subject: Re: [BCD536HP] Control Channel Only - The RadioReference Wiki

  The odds of a voice channel being used by another system are much greater than the odds of a voice channel being reassigned as a control channel. It would require every radio on the system to be reprogrammed.

It also causes delayed acquisition of the control channel should it be lost, as the scanner will have to evaluate all those voice-only channels which will not be control channels.

I have yet to see a system in my range reassign a voice channel as a control channel. I have seen voice channels interfere with scanning systems (or should I say scanning the correct systems).

From: MCH
Topic: 4250 Message: 4306

Understood. The premise is that you know what the control channels are.

Not saying it's not a good idea to import all for the main dB, but when programming a FL, you don't need the voice-only channels (again, if you know what those are).

Just today I had someone who commented how much better their scanner is performing since they removed all but the control channels.

Reason being (one reason anyway) is that if the scanner loses the control channel, you don't want it evaluating all the voice channels for control data. You only want to evaluate the control channels. So, it will acquire the true control channel much faster. After all, even the voice-only channels are 9600 data on a P25 system, so the scanner will try to decode valid control channel data from them if it sees activity.

A secondary reason is what John mentioned - if those voice channels are used for control on another system, you might never scan the system you want, but will scan some other system the scanner thinks is the correct one because it sees a valid control channel. We have previously discussed a way to eliminate this secondary issue (which could easily be a primary issue as time goes on and P25 becomes more prolific).

OK, I'm confused. Not about what control channels are, I know what they are.

But my understand was that the "system" changes the control channel each day so you never know which one it will be, therefore you have to have all the frequencies in the talk group entered. Or am I not understanding how it works?

Also, if it does NOT change, are you saying that I only have to have the control channel and NONE of the other channels?

The reason I'm asking is that it seems that my scanner is REALLY, REALLY slow in scanning. I don't have THOUSANDS of frequencies loaded up. Maybe a few hundred. It seems… like it take… forever… to scan through what I've got. Whereas, if this were a normal old-school programmable or even a "996", that it would take a few seconds to scan through the bunch. The specs claim 80 channels per second scan speed. But it seems that it's holding on one for a full second or half a second at best, and moving to the next, and so on.

Am I not doing something right? Or, rather, am I doing something wrong?

I think there is some confusion.

First, not every system changes the control channels. One near me never changes the control channel, but does have a couple alternate frequencies that could be the control channel should something happen on the control channel. Some systems rotate the control channel every day, and some don't. It all depends on how it's programmed.

Second, there is a limited number of control channels that could be used. This is typically three or four frequencies.

> Also, if it does NOT change, are you saying that I only have to have the
> control channel and NONE of the other channels?

If the control channel never changes, you can program that frequency only and you will scan the system just fine. I program the alternates in "just in case". But, if you program only the primary control channel, that is the optimum efficiency, as the scanner will only evaluate the true control channel. Of course, should it change for whatever reason you won't hear anything.

It will hold a trunk system for around a second or so while it evaluates the control channel for TG assignments. So, your scan rate will depend on how many trunk systems you have programmed, how many conventional channels, how much activity on those channels there is (including delays for active channels with the wrong CTCSS/CDCSS/NAC or non-control

channels with activity if the scanner is searching for a control channel, AND might be limited by the HOLD TIME setting. I always set mine at 0 for maximum scan rate. If you have it set to something like 2 seconds, your scanner will spend 2 seconds scanning that system even if there is only one frequency programmed.

> Am I not doing something right? Or, rather, am I doing something wrong?

Hard to say. Depends on your replies on the above potential issues.

Not all systems change CC daily. Most here rarely change CC and the alternates are just there if the main fails. Those alternates then act as voice channels until they are needed as CC.

Not saying it's not a good idea to import all for the main dB, but when programming a FL, you don't need the voice-only channels (again, if you know what those are).

Just today I had someone who commented how much better their scanner is performing since they removed all but the control channels.

Reason being (one reason anyway) is that if the scanner loses the control channel, you don't want it evaluating all the voice channels for control data. You only want to evaluate the control channels. So, it will acquire the true control channel much faster. After all, even the voice-only channels are 9600 data on a P25 system, so the scanner will try to decode valid control channel data from them if it sees activity.

A secondary reason is what John mentioned - if those voice channels are used for control on another system, you might never scan the system you want, but will scan some other system the scanner thinks is the correct one because it sees a valid control channel. We have previously

discussed a way to eliminate this secondary issue (which could easily be
a primary issue as time goes on and P25 becomes more prolific).

From: Richard Carlson
Topic: 4250 Message: 4310

Motorola built P25 systems have a primary Control Channel and usually up to 3 Alternate Control channels. The Control Channel remains on the Primary unless there is a failure, then it reverts to an Alternate.

Harris and other manufacturers may use different schemes on their P25 systems.

Older Motorola trunked systems (P16 or other analog 3600 baud "Motorola" trunking systems) usually have up to 4 control channels that rotate, often around midnight.

EDACS systems usually rotate the control channel among all channels.

One advantage of having only certain channels as control channels as done on P25 and Motorola systems is that it makes it easier to add or delete voice channels from a system, just tell the controller, no need to inform the mobile and portable radios. On EDACS systems all mobile and portable radios need to be reprogrammed if a channel is added later. On a wide-area system this can be an issue.

The rotation of the channels was to allow infrastructure to "share the load". Newer equipment was designed for constant use and this no longer was a concern.

On P25 systems the only frequency you need in your scanner is the active control channel, the scanner will direct itself to the voice channel automatically. This is the essence of Control Channel Only trunking. This is also the way subscriber radios are programmed. If you ever get the chance at looking at the programming of a P25 radio on a wide-area P25 system you will only see a list of control channels in them. The radios can also learn new control channels from the data stream. If you run PRO96COMM or Unitrunker on a P25 control channel it will show the current and alternate control channels as well as neighboring sites control channels. This allows system radios to learn what other control channels it might need just in case they aren't already in the radio.

Putting the Voice-only channels of a P25 system into your radio will not help and may slow down your radio as the scanner checks each for activity.

4311. Re: [BCD536HP] Control Channel Only - The RadioReference Wiki

Yahoo group: BCD536HP
Date: 2017-01-04 14:34:02 UTC
From: Bill Nolan
Topic: 4250 Message: 4311

"Older Motorola trunked systems (P16 or other analog 3600 baud "Motorola" trunking systems) usually have up to 4 control channels that rotate, often around midnight."

Boy, doesn't that bring back memories... I believe it was Bristol Ct. who's CC would change daily. It was just before trunking scanners entered the scene. I would turn on the non-trunking 800MHz scanner and, unlock the other frequencies (I believe there were a total of 4) to identify data channels which would cause the scanner to lock up. Once identified I could lock them out. By process of elimination I would eventually be left with one frequency to listen to. It's all very vague. I also remember maybe having to dedicate one scanner to that system? And use another scanner to listen to the conventional stuff? Can't remember in detail.

"Putting the Voice-only channels of a P25 system into your radio will not help and may slow down your radio as the scanner checks each for activity."

In UPMAN's response to this control channel only (CCO), he stated the 536 is always in CCO so there is no "switch" provided to allow turning CCO on or off. I will assume that applies to the 436 also. So I'm guessing if I download a trunked system that I could activate CCO on a previous scanner model, and program my x36 from the Internet I may be getting all voice channels but the radio is going to ignore them. Taken a step further, it means there should be no difference in scanning speed if I were to first edit out all voice channels and leave only the control channel(s), on the one hand, or allow all channels (frequencies) to be downloaded and programmed into the x36 letting the scanner ignore all but control channels. I've got to try running the Ct. State Police (P25) on my 536 by programming the system twice. I will make up two FL's and add them to a quiet but largely populated FL. I will then see if I can discern a difference in the time it takes the scanner to complete one loop of everything scanned. Wondering if I can just drop my antenna connection? I can further attempt to limit the many sites the CSP uses in an effort to measure the effect that would have on speed.

So, how do I know which are control channels and which I can eliminate?

> On P25 systems the only frequency you need in your scanner is the active control channel, the scanner will direct itself to the voice channel automatically. This is the essence of Control Channel Only trunking. This is also the way subscriber radios are programmed. If you ever get the chance at looking at the programming of a P25 radio on a wide-area P25 system you will only see a list of control channels in them. The radios can also learn new control channels from the data stream. If you run PRO96COMM or Unitrunker on a P25 control channel it will show the current and alternate control channels as well as neighboring sites control channels. This allows system radios to learn what other control channels it might need just in case they aren't already in the radio.

From: Bill Nolan
Topic: 4250 Message: 4313

I ran a quick and dirty test that was hardly scientific and found no difference in scanning speed when comparing my listing all the frequencies under a particular site or just the control channel single frequency. There were only 6 frequencies max so like I said, hardly scientific. But according to UPMAN there should be no difference. I also kept my system sites limited to one, the same one, on both sides of the comparison. (Each site comes with its own set of frequencies or channels. The amount of time the two setups took were identical, about 1 second. I would expect if I were monitoring additional sites my time would increase? But struggle with this if the scanner is only checking control channels, and none of the voice channels the speed shouldn't suffer? I used ARC software for editing, it allowed me to research RadioReference.com to identify the control channel.

Bill

On Jan 4, 2017, at 8:25 AM, Richard Carlson n9jig@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Motorola built P25 systems have a primary Control Channel and usually up to 3 Alternate Control channels. The Control Channel remains on the Primary unless there is a failure, then it reverts to an Alternate.

Harris and other manufacturers may use different schemes on their P25 systems.

Older Motorola trunked systems (P16 or other analog 3600 baud "Motorola" trunking systems) usually have up to 4 control channels that rotate, often around midnight.

EDACS systems usually rotate the control channel among all channels.

One advantage of having only certain channels as control channels as done on P25 and Motorola systems is that it makes it easier to add or delete voice channels from a system, just tell the controller, no need to inform the mobile and portable radios. On EDACS systems all mobile and portable radios need to be reprogrammed if a channel is added later. On a wide-area system this can be an issue.

The rotation of the channels was to allow infrastructure to "share the load". Newer equipment was designed for constant use and this no longer was a concern.

On P25 systems the only frequency you need in your scanner is the active control channel, the scanner will direct itself to the voice channel automatically. This is the essence of Control Channel Only trunking. This is also the way subscriber radios are programmed. If you ever get the chance at looking at the programming of a P25 radio on a wide-area P25 system you will only see a list of control channels in them. The radios can also learn new control channels from the data stream. If you run PRO96COMM or Unitrunker on a P25 control channel it will show the current and alternate control channels as well as neighboring sites control channels. This allows system radios to learn what other control channels it might need just in case they aren't already in the radio.

Putting the Voice-only channels of a P25 system into your radio will not help and may slow down your radio as the scanner checks each for activity.

There are control channel decoding programs that will tell you. Or you
can use a source like RadioReference to find out which are which.

From: MCH
Topic: 4250 Message: 4315

You likely never lost the control channel, so the scanner always went back to the same frequency and never checked the others.

There are also likely no P25 systems in your area that use the other frequencies - or at least none that you went into range of.

IOW, your test was flawed.

The scanner will always check an active control channel for about a second. The difference comes when the scanner is trying to re-establish the control channel. Checking 1 to 4 frequencies will be faster than checking 5 to 20 or so.

If you really want to test this, add some other active P25 frequencies to the list and delete the currently active control channel. That still might not show something you can detect mentally, but you might see the scanner pause on those non-control channels.

If that's the case, that the 536/436 is always in "CCO" mode, then why does it seem to slow down and sludge through the trunked systems? These new scanners should zip through their programming like greased lightning.

Sent from my iPhone

> "Older Motorola trunked systems (P16 or other analog 3600 baud "Motorola" trunking systems) usually have up to "Putting the Voice-only channels of a P25 system into your radio will not help and may slow down your radio as the scanner checks each for activity."
>
> In UPMAN's response to this control channel only (CCO), he stated the 536 is always in CCO so there is no "switch" provided to allow turning CCO on or off. I will assume that applies to the 436 also. So I'm guessing if I download a trunked system that I could activate CCO on a previous scanner model, and program my x36 from the Internet I may be getting all voice channels but the radio is going to ignore them. Taken a step further, it means there should be no difference in scanning speed if I were to first edit out all voice channels and leave only the control channel(s), on the one hand, or allow all channels (frequencies) to be downloaded and programmed into the x36 letting the scanner ignore all but control channels. I've got to try running the Ct. State Police (P25) on my 536 by programming the system twice. I will make up two FL's and add them to a quiet but largely populated FL. I will then see if I can discern a difference in the time it takes the scanner to complete one loop of everything scanned. Wondering if I can just drop my antenna connection? I can further attempt to limit the many sites the CSP uses in an effort to measure the effect that would have on speed._,___

Define "sludge". The scanner still has to evaluate the control channel data which takes around a full second.

The CCO mode only applies when it first acquires the control channel. Once acquired, the scanner will check that frequency first on the next scan cycle.

Agreed. It I don't have the answers to why trunked systems take longer. It's as if the scanning function takes a different route through additional circuitry when it sees that the next system in que is a trunked system. It then has to identify what type of trunking is used before it applies itself to determining how to treat each channel within that system. True, it's all happening at the speed of light (or close to) but it's amazing to me that even at the increased performance of today's electronic wizardry we still find something to complain about! I guess the more we learn and have, the more we want!

The type of CC it's looking for is determined by the programming, so it does not have to determine that (makes programming more complex, but allows for better performance and fewer bad control channel decodes).

There is "additional circuitry" involved, as the signal has to be decoded. Specifically, the scanner has to lock on the signal (as it does with any signal), sync, then decode a full string of the control channel data so as to not miss any TG assignments. Then, it compares that with the list of TGs you want to scan (or the list not AVOIDed in the case of ID SEARCH), and it it sees a "scannable" TG, it tunes to the voice channel, locks on, syncs, and then decodes the audio.

Most of this happens very fast with the exception of the full cycle decode of the control channel data. The scanner also MIGHT evaluate the TG grants as they are transmitted, and not at the end of the full cycle. In fact, I believe they are evaluated "on the fly".

And there you have it! Thanks Joe. Regardless of how long it takes for the various decodes, etc., we should be thankful we have technically viable scanners that have followed the history of two way radio, meeting the commercial gear at almost every turn. To comment negatively about scanning speed is almost unconscionable! And to think, most all of this new technology was due to a natural progression in the world of electronics. A bunch of hams experimented with repeaters, duplex systems on the VHF Low & High Bands back in the day and we have a lot to show for it.

And considering the 'blinding' speed of the data on the RF signal to decode (P25) of 9600 bps, it's going to take time for learning, then processing all the TG in use on an active system, based on user setting merit (is this a desired or ignored TG?). For the system user, not a big deal, they're locked onto the control channel only. For scannerheads, that time is noticeable when jumping systems. It's fine, just accept that you may miss a bit of the transmission, just like an analog scanner. That's normal in scanning.

"EDACS systems usually rotate the control channel among all channels."

Our large statewide EDACS system does not seem to do this, The control channel is the first LCN and has been for many, many years on most sites. The only time this has happened is for testing purposes.

4324. Open Mic!

Yahoo group: BCD536HP
Date: 2017-01-06 10:58:56 UTC
From: n1chu@...
Topic: 4324 Message: 4324

Ok... I'm looking for a bit of insight here. Occasionally, it happens a microphone isn't hung back on its hanger. Instead, it's left on the seat or between the operators legs where it eventually ends up wedged between the operators butt and the seat with the transmit button depressed. This is commonly referred to as an "Open Mic"! (I have another term for it but posting edicate prevents its use here.) after a minute or two of continuous transmission, the system dispatcher usually decides it's time to broadcast the obvious and announces to all that someone has an open mic. This is confusing to me... first, because dispatch is announcing to obvious, and second, the guy with the offending radio can't hear a word of it! Further, I've heard this phenomenon practiced on systems that have dispatch consoles telling the dispatcher which radio is the offending radio (each transmission is accompanied with a data burst with identifying info). And then there's the pre-selected "Timeout Function" that should be set for a reasonable time, maybe 3-5 minutes. It serves as protection for the radio transmit finals as well as a failsafe for those too preoccupied with the job of protecting us less unfortunates to remember to hang up the damn mic when finished!

Now that I've plainly laid out the issue at hand, and with the understanding that I am referring to only those systems with unit ID data bursts;

Is there something in the dispatcher's manual that directs them to make such useless announcements? (I realize there are circumstances that would allow for an announcement from dispatch such as when the offending unit was congregating with other units who were capable of hearing the dispatch alert on other radios... they could probably provide for a quicker id of the offending unit than dispatch calling the offending unit on their cell phone.

Just sayin...

Bill

While for the most part it is a futile exercise some agencies provide 2 radios, a mobile and a portable. In these cases occasionally the offending user might here it on the second radio.

In our agencies we would announce on the VHF radio if there was an open mic on the UHF and vice versa. This way we could tell if it were a car radio since the dispatcher would then get feedback or hear his voice.

Topic: 4324 Message: 4326

The announcements are made in the hopes the offender or someone near him has another radio on. The dispatcher audio overrides the user audio on that TG (or conventional repeater). Many times I've heard this and the offender's transmitter mysteriously is fixed in short order.

A lot of agencies use a portable and car mounted radio, so the "offending unit" can still hear the announcement, however, I find that it rarely stop the transmission.

Topic: 4324 Message: 4329

Unfortunately most dispatchers are not trained thoroughly on how systems operate. If it is a repeater system the offender may hear the request if a 2nd unit is on in the area. Ie...portable and mobile although you would probably have squeal city.The other problem is most agencies Supervisors who are now pissed standing over the dispatcher have no idea how a radio works and the dispatcher is going thru the motions to make it look like they tried something.
Howie

Nothing new. Been a problem since mobile radio was invented. More of a problem with analog systems because there ISN'T any "data burst" or digital ID. You hit the nail in the head... the one with the "open mic" won't hear the dispatch calling about it. You sure hear some interesting things being said when they don't know they're "live and on the air"!

Topic: 4324 Message: 4331

True, but I'm hearing it on the same frequency as the open carrier. It's not common to leave a second radio turned on and on the same channel in close proximity to the offending radio due to feedback. However, if the portable (the second radio) were on a different channel it should work. However, the message would probably give it away... ex: "Someone has an open mic on the dispatch frequency". Or "All cars, check your mobile in-car radio for an open mic. We as scanner listeners probably would not hear this transmission because our scanner is locked onto the open mic frequency!

Again, just sayin. It doesn't bother me that I hear this type of thing. I understand that to the police or fire radios are a tool used to get the job done. They really could care less about HOW they do what they do, just as long as they CONTINUE to do what they do. I've seen my frustrated fire chief throw a portable radio over his shoulder because it didn't work. But mine did... or I should say the one I used to have did-the chief "requisitioned" it and told me to retrieve the radio he discarded and do whatever it is one does to a radio that doesn't work! Left up to him, he would have tossed it into the garbage. The attitude is simply stated as "People's lives depend upon the jobs we do. We in turn need to depend upon the tools we use. and they better work every time. We will tolerate no less." Yea, guilty... I'm a firefighter.

What won't work?

Many conventional (analog) repeaters
have landline override of the audio.

From: Gary Saffer
Topic: 4324 Message: 4337

We had that, because our consoles were connected to the transmitter by
LL. Our dispatchers would call out if there was an open mic because the
crew had portable radios in addition to the two radios in the ambulance.
Sometimes the dispatcher would know who it was by looking at the Unit ID
on the console.

Another neat feature our dispatchers had was full duplex on the console
end. So, even if there was an open mic, they could usually hear other
units calling in.

It was, and is, a very sophisticated radio system compared to what
private services use.

4338. ID Format Help

Yahoo group: BCD536HP
Date: 2017-01-07 16:20:16 UTC
From: Alan Marote
Topic: 4338 Message: 4338

Hello Group.

I recently started using the ID Search mode on the local EDACS trunk system. Several new talk groups popped up but the ID format has me puzzled. Specifically, IDs "i9964," "i6302," and "i6433" were found. I have not found a way to convert these to Decimal or AFS format even using a couple of online converters. Anyone have any info on this?

Thanks,

al

So the radio won’t tell what talkgroup it has discovered… only the radio ID? So “TGID:i6433” is all I get in ID Search mode?

No, it won't show a TG because there is no TG involved.

Radio-to-radio transmissions on the system
(what you are seeing) do not use any talkgroup.

Yahoo group: BCD536HP
Date: 2017-01-07 19:50:47 UTC
From: Bill Smith
Topic: 4324 Message: 4343

The radio’s Time Out Timer should be set for no more than 60 seconds. If you think that’s short, get a stopwatch and try to talk about something non-stop for even 30 seconds. One minute is a long time.

BTW, it’s not there to protect the transmitter. It’s there to clear a radio that is jamming the frequency so others can use it. Generally, the offending radio will generate a loud tone from the speaker when it times out, letting the operator know what happened.

As for announcing “Open Mic” That’s just a strange practice that persists. With older single frequency systems, it was totally useless. With repeaterized or trunked systems, usually the dispatcher has transmit priority so he can make the announcement and all the radios except those in transmit will hear it.

Subject: [BCD536HP] Open Mic!

Ok... I'm looking for a bit of insight here. Occasionally, it happens a microphone isn't hung back on its hanger. Instead, it's left on the seat or between the operators legs where it eventually ends up wedged between the operators butt and the seat with the transmit button depressed. This is commonly referred to as an "Open Mic"! (I have another term for it but posting edicate prevents its use here.) after a minute or two of continuous transmission, the system dispatcher usually decides it's time to broadcast the obvious and announces to all that someone has an open mic. This is confusing to me... first, because dispatch is announcing to obvious, and second, the guy with the offending radio can't hear a word of it! Further, I've heard this phenomenon practiced on systems that have dispatch consoles telling the dispatcher which radio is the offending radio (each transmission is accompanied with a data burst with identifying info). And then there's the pre-selected "Timeout Function" that should be set for a reasonable time, maybe 3-5 minutes. It serves as protection for the radio transmit finals as well as a failsafe for those too preoccupied with the job of protecting us less unfortunates to remember to hang up the damn mic when finished!

Now that I've plainly laid out the issue at hand, and with the understanding that I am referring to only those systems with unit ID data bursts;

Is there something in the dispatcher's manual that directs them to make such useless announcements? (I realize there are circumstances that would allow for an announcement from dispatch such as when the offending unit was congregating with other units who were capable of hearing the dispatch alert on other radios... they could probably provide for a quicker id of the offending unit than dispatch calling the offending unit on their cell phone.

Just sayin...

Bill

Okay Joe. Makes sense. I guess I misunderstood what “ID Search” was supposed to do. I am trying to find talkgroups that I know are out there but are not listed on RadioReference.

Thanks,

al

No, it won't show a TG because there is no TG involved.

Radio-to-radio transmissions on the system
(what you are seeing) do not use any talkgroup.

ID search will show TGID and UID if you have UID on the display mode. The scanner definitely shows unknown TGID's and it will even say Unknown along with the TGID it found.

From: Gary Saffer
Topic: 4324 Message: 4346

I don't know about our dispatch radios, but our CMED radios had a TOT of about 30 seconds. I always tried to get my notification in before I heard the beep in my headset.

A notification longer than 30 seconds is a waste of time. In fact, in some cases a notification of more than 10 seconds is a waste of time.

All the hospital wants to know is what level of response they need. Is it something routine or do they need to put out the "Bat Light" and get all hands on deck?

I stood in EDs next to radios and watched the nurse's eyes glaze over with the length of some of the notifications.

Age, sex, medical condition, treatments, is about all that's needed. PMH, medications, allergies, favorite vegetable, long walks on the beach, doctor's shoe size... is all stuff that should wait until the crew gets to the hospital.

4348. City data table read error Please check CityTable_V1_00_00.dat in SD Card

Yahoo group: BCD536HP
Date: 2017-01-31 05:03:59 UTC
From: alan@...
Topic: 4348 Message: 4348

A friend of mine has four BCD536HPs.

Suddenly this past weekend, two of them began displaying this error message:

City data table read error
Please check
CityTable_V1_00_00.dat
in SD Card

Has anybody else experienced this problem and what exactly causes it? I have seen a couple related posts on RadioReference, but I find it odd this happens on two of his radios on the same day after about a year of continuous usage. So I somehow doubt it is just a card failure.

Thanks,
Alan/N3LGE

Coincidences do happen. He should clear the user data and re-write the card. If that fails, try a reformat followed by the same. If that fails, replace the card and complete the alternate (second) suggestion.

From: ccclifton@...
Topic: 4350 Message: 4350

Can't get this Fire Note to connect to the 536. It will connect when using the WiFi but not Access Point feature.

536 Access Point works on my Samsung cell just fine, two of use have tried and can't figure it out.

Any ideas, suggestions etc...all out of ideas.

Thanks,

Craig, N6BWJ

From: John Belsize
Topic: 4348 Message: 4351

Greetings,
Has anyone created a custom bank set up as CC Only ID Search with the 536?
The 536 defaults to CC Only ID Scan when held on a system using the database.
I'm wondering if the 536 is capable of CC Only ID Search like the BCD396T is.
The BCD396XT doesn't allow CC Only ID Search for some reason.
Care to chime in here Paul?
Regards,
Joseph CF3GOC

  Greetings,
Has anyone created a custom bank set up as CC Only ID Search with the 536?
The 536 defaults to CC Only ID Scan when held on a system using the database.
I'm wondering if the 536 is capable of CC Only ID Search like the BCD396T is.
The BCD396XT doesn't allow CC Only ID Search for some reason.
Care to chime in here Paul?
Regards,

Joseph CF3GOC

That may be the issue, as I think Fleetnet upgraded.

4363. Village of Menomonee Falls, Wisconsin 911 Dispatch Change for Police & Fire

Yahoo group: BCD536HP
Date: 2017-02-01 20:06:30 UTC
From: skrug4@...
Topic: 4363 Message: 4363

As of this morning at 7 am CST Village of Menomonee Falls, Wi ended there 911 dispatch service for police and fire after 50 years. It is now done by Waukesha County Communications Center. The police dispatch is still under the same talk group:(26416). The fire dispatch is now on (Fire Dispatch A) (talk group: 22032) all other Village of Menomonee Falls Police & Fire take groups are still the same at this time.

Ok, things become much easier. In Sentinel, navigate to Canada --> Ontario --> Grey --> County SystemsRight click on "Bell Fleetnet - Ontario Provincial Government Zone 1" and select "Append Favorites List"Select the FL or create a new one.Click the star with pencil icon to open the FL editor.Select the FL you put Bell Fleetnet into.Click on the Bell Fleetnet system in the left pane of the FL editor window.Click on the Options tab in the right pane.Set ID:Search to ON
Do whatever else you want to do, but ultimately write this to the scanner. The system will be in ID search mode.

I have programmed Bell Fleetnet Zones 1 and 2 successfully by using Sentinel to download the info from the database as is. You can modify the favorite list later by avoiding talk groups you may not want to include, or transmitter sites too far from your location. Has always worked fine for me through all the versions of Sentinal and the various updates of the Bell Fleetnets.

4366. Re: [BCD536HP] CC Only ID Search

From: qp2trz@...
Topic: 4348 Message: 4366

Thanks Paul,

Followed your instructions and so far, with the master DB off, no hits.
Will observe tonight from the home QTH where there is nothing but Fleetnet Zone 1.
I work near the RF jungle known as Toronto.
The display does show the different sites changing, and the S-Meter toggling.
How does one hold on one site and monitor the traffic of that site only?

Regards,

Joseph

From: John Belsize
Topic: 4348 Message: 4368

Well,
No joy with CC Only ID Search.Please read the following verbal flowchart and comment on what I think CC Only ID Search should be.I make these observations using a BCD396T in CC Only ID Search mode.
1. List of control channels.2. Frequency table with correct values.3. Group set to CC Only ID Search Mode.
4. Radio scans control channel frequencies and stops on favourable control channel.5. Radio decodes control channel information and opens audio on first talkgroup it decodes displaying TGID. number.
6. When Talkgroup no longer active scanner returns to item 4 waiting for next active talkgroup.7. If scanner loses favourable RF scanner returns to frequency scan looking for next favourable frequency.
What I observe the 436 doing is continually scanning the different sites and never locking on any RF unless I manually hold the scanner on a site.Even with traffic on that site and the site's control channel servicing a talkgroup, the radio does not react.

I must correct myself in saying I am using the 436 not the 536.
I noticed each site containing all the frequencies of the site in its list of control channels.I haven't removed the voice frequencies from those lists but I suspect it wouldn't change the behaviour of the radio.
Paul, would you be stepping out of bounds sending me a flowchart of the 436 logic in CC Only Search mode?To conclude, the 396 stops and decodes active talkgroups where the 436 doesn't.The 436 works fine using the database.
Regards,
Joseph.

4369. Re: [BCD536HP] CC Only ID Search

Yahoo group: BCD536HP

From: MCH
Topic: 4348 Message: 4369

You continue to use confusing terms, or you are confusing them.

ID SEARCH is a mode that involves scanning TGs on a trunked system.

CC Only is a mode that uses control channel frequencies to scan a
trunked system.

The two are not related, so technically there
is no such thing as "CC Only ID Search".

As such, your point #3 makes no sense. A Group can only contain
channels, and cannot be set to CC only OR to ID SEARCH. In the case of
Groups, neither term applies. Systems can be set to CC ONLY and/or ID
SEARCH independently of each other.

Maybe you could better explain your questions.

If the 436 is never "locking onto" a site, it means the system is
programmed with the wrong system type - such as programming a Motorola
system as P25, or a DMR system as EDACS.

It is also possible that you don't have the SERVICE TYPE programmed
correctly on the 436 for your Favorites List. Or maybe you don't have
any TG programmed at all which may cause the scanner to ignore the
system. The solution would be to program a TG 9any TG) into the Group.

Thanks Joe.

I might have described it wrong. In essence my 396 has no talk groups programmed. No voice channels programmed (the frequency table of the trunked system takes care of that). And scans other entered control channels when the RF of the current frequency degrades enough. When the scanner locks on a favourable control channel, it takes care of everything else. Including decoding P25.
Does this help describe what I am looking for in the 436? All my 396Ts do this flawlessly. Right now the 436 doesn't even lock on a control channel.
My next step is to remove all the voice channels from each site's frequency list. Im guessing the scanner is looking for a control channel and moves on to the next site if the RF received is a voice channel.
I'm working Ontario Fleetnet Zone 1.

Regards,

Joseph

How do you have it programmed? What system type?

4372. Re: [BCD536HP] CC Only ID Search

Yahoo group: BCD536HP
Date: 2017-02-09 03:16:20 UTC
From: John Belsize
Topic: 4348 Message: 4372

Joe,
Thank you for your question.
Firstly, I do have to correct bullet 3. It is not group, it is system.
From the screen of the BCD396T.
C-CH Only: ONI-Call: OFFStatus:
IGNOREID Scan/Search: SEARCHFrequencies: FLEETNET ZONE 1 CONTROL CHANNELS (NO VOICE CHANNELS)
Frequency Table: FLEETNET ZONE 1 FREQUENCY TABLE.
The scanner does not display the system type.I suspect the choices are available when creating a new system.If I recall correctly it is set to Motorola Type II.I have to locate the programming cable to pull more details.Also the 396T decodes the site ID and displays it on the screen in CC-Only mode. It doesn't use a label from anywhere for that ID.
As I was removing the voice channels from the site frequency lists of the 436, it dawned on me to create one site with all the control channel frequencies in it. Like it is in the 396.
Thank you for your patience as I learn the entry methods of the 436.I chose CC-Only Search so as not to rely on the database when looking for new talkgroups.I understand the 436 and the 536 are designed around the database.I use the database for known-talkgroup scanning.It's those unfamiliar TG numbers in CC-Only ID Search that catch my eye.I don't mean the status bit either.

Perhaps someone can explain the difference between the BCD396T and the BCD396XT.
Nothing beats the database and GPS when travelling down I-95!I think those of us in the scanner hobby agree we should paint a crown on Paul's head in his picture.
Regards,
Joseph

Do you have at least one TG programmed?
(even if it's not used on the system)

From: John Belsize
Topic: 4348 Message: 4374

Joe,
Thank you for your reply.
Negative.No talkgroups programmed.Any TGID displayed comes from the decoding of the Control Channel.When a TGID is displayed, the radio switches to the associated voice channel and displays the voice channel frequency.All this is decided with the use of the site's/system's frequency table.Also when the 396T is searching and the hold button is pressed, the control channel audio opens up.During this state the radio will display any and all TGIDs that are voice (P25 or analog) and display their IDs.This is why I didn't purchase any XTs prior to the 436. My friends asked me to program their XTs for CC-Only ID Search and I couldn't, not from the keyboard nor the software.However the software did indicate the XT was programmed for CC-Only ID Search but the radio stopped on nothing.For someone that uses the pre-determined talkgroups, all radios are great.To decode the control channel only the 396T shines.
I've created a favourite entry on Sentinel consisting of one site and 35 control channel frequencies. Fleetnet Zone 1 control channel frequencies are used as the control channel frequencies of that site. Now i can't get the radio to look at the favourites entry.I've turned all lists off and the main database off but the radio doesn't give me my favourites as an option to pick.Also it seems the radio is scanning some predetermined groups or something. I thought I programmed this favourite group as Quick-Key 1. Any time I press QK1 the screen displays some Quick Key dialogue screen. Pressing button 1 displays a 1 at the top but does not activate my favourites system. More reading...
Regards,
Joseph

I bet that's the issue - the scanner is seeing that you have no TGs and is skipping the system. As I said twice before, program one (any one - used or not), and I bet the issue goes away. Make sure the Service Type for that TG is also enabled. It will likely be Custom 1.

Initially, don't program any Quick Keys. That will eliminate any issues with them such as not having something enabled.

If the SET SCAN SELECTION does not give you the FL you have programmed, the FL is not programmed. (if that makes any sense)

List,
My thanks to Joe for his patience and knowledge and everybody else for the bandwidth.My 436 now does CC Only ID Search.
Doesn't display the frequency or the site tag, though, but that's OK.
Perhaps in a later firmware update.

Joey

4377. New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-10 19:01:51 UTC
From: Ray
Topic: 4377 Message: 4377

Hello to all.

I am new to this group as well as to the functions of this scanner.

I haven't purchased it yet but have some questions.

Until I can get the answers I need there is no sense of me purchasing one.

The last Uniden scanner I purchased was 246T and it has served me well.

I have used RadioReference database to find my frequencies and the LCN order.

I line in Mobile County Al and I can find those frequencies for the County of Mobile such as Citronelle, Saraland, Creola, etc.

There are not any frequencies for the CITY OF MOBILE. They switched to a new system about 3 years ago.

I can listen to The City of Mobile on Broadcastify, but I want my on scanner.

1. Will this scanner receive The City of Mobile, Al out of the box?

2. Do I need to have it upgraded to the Pro-Voice in order to receive The City of Mobile, Al?

3. Do I need to also purchase the encryption key?

4. How hard is this scanner to set up?

I am reaching out for your help. I want to be able to listen to the City of Mobile, not just the County and the municipalities within the County.

I have searched on RadioReference and everywhere I can think of for those frequencies for The City of Mobile.

Any help on my questions will deeply be appreciated.

Ray Ray

Encryption (more specifically decryption) is not legal in the USA.
If you can hear it on Broadcastify, it's very likely not encrypted.

Setup is as simple as entering a zip code and range.

As to the other questions, I'll defer to someone more familiar with
those specific systems.

From: Bill Nolan
Topic: 4377 Message: 4379

Ray,

I see the Mobile City PD and FD listed as;
System Name: Mobile County
Location: Mobile, AL
County: 2 counties
System Type: EDACS Networked Standard
System Voice: ProVoice and Analog
Last Updated: April 12, 2014, 8:09 pm (Added Site # 017 (Jack Hamilton Rd))

System type is EDACS. But it's a specific flavor of EDACS called ProVoice. I believe EDACS is an open (not intentionally designed to be a private system, but the ProVoice flavor of it may have been chosen before scanners were manufactured to receive it. Now, the 536 can receive ProVoice but at an additional cost ($50?-the cost of the license you get from Uniden so you can download their firmware which modifys the scanner for inclusion. That's it.

If what you hear on Broadcastify is what you want, it's something you can get. Broadcastify merely links personal scanners just like you can buy and streams them live over the Internet.

Read what other replies you get from the group also. They may have firsthand knowledge. I live in Ct. and only looked at RR.

Mobile CITY is using Pro Voice on the Mobile COUNTY EDACS system. They made that switch about three years ago, as you point out. Police went first, then Fire.

I think the rest of city services are using Analog, but I'm not sure if it's on the county or city service.

To receive PD and FD, you'll need to buy the Pro Voice upgrade. It works well and I was able to hear Mobile PD and FD when I was down there over New Years.

There is a new county/city P25 system being built, but it hasn't gone on line yet. There was an investigative report in the paper a couple of years ago questioning why the mobile and portable radios were sitting in a warehouse, but I haven't seen anything since.

If you live in the city itself, the Mobile County Simulcast Site is probably your best bet.

You'll also be able to hear the analog traffic, the county sheriff, county fire, EMS, Pritchard and some of the other cities that use the system.

From: Rick WA6NHC
Topic: 4377 Message: 4381

Ray,

To clarify what the other poster said:

Should you choose to buy one of the BCD436HP or BCS536HP, you will want to download and use the latest firmware (free, discussion on how to manage that is another topic). Within that firmware is the code to use NON-encrypted Pro-Voice and DMR. To use the Pro-Voice and/or DMR, you pay an additional $50 (per scanner, per mode) ONCE. Once programming the magic number (what you actually purchase, it's keyed to your specific scanner, not shareable) has been entered into the scanner, that new mode works. It's not complicated.

What Joe was intending to say is that decryption (not the use of encryption) of encrypted data (or voice in this case) is illegal in the US (your mileage varies elsewhere). So if your agency uses encrypted, you won't hear it.

Opinion: Once you adjust to it, the BCDx346 scanners are pretty awesome. I have three of them (one home, one RV, one vehicle) and use the other features like self-programming based on GPS location, a LOT. Since I travel, it means no user input as I transit regions so I can hear things important to me (accident closing the road? Reroute to an alternate before getting caught).

Which one you get depends on your intended use. I've used the '536 remotely (listened to large fires near home) while being several hundred miles away because of the wifi ability... Operationally, they're near identical to each other. Like most things, it's features vs budget. Either of these should last you a LONG time, so your investment will pay off.

I've not used the Pro-Voice mode, but I regularly use the DMR for ham radio (and have since bought a few DMR devices because of that so I can actually talk in that mode too).

Good luck,

Rick wa6nhc

4382. RE: [BCD536HP] New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-11 01:50:44 UTC
From: Ray
Topic: 4377 Message: 4382

Thank you Gary.

I can receive the other Cities within the county, but they are also in process of switching over to the same system that The City of Mobile uses. I live outside the City of Mobile, but I am in Mobile County about 22 miles from the City.
I am using a Discone antenna and have no problem receiving them (The other Municipalities within the County as of now.)
I just can't receive The City of Mobile.

I have heard a lot of good things about this new BCD536 base scanner.
I just don't have the money to buy something that would not receive the City of Mobile.
I do not know if this is wrong or right. But I was told all you had to do was enter the zip code 36601 for Mobile and it would load
The City of Mobile as well as all the other Municipalities within the county.

Thank you again Gary for your feedback and help. If you have any more I am listening !!!!!!!!

Mobile CITY is using Pro Voice on the Mobile COUNTY EDACS system. They made that switch about three years ago, as you point out. Police went first, then Fire.

I think the rest of city services are using Analog, but I'm not sure if it's on the county or city service.

To receive PD and FD, you'll need to buy the Pro Voice upgrade. It works well and I was able to hear Mobile PD and FD when I was down there over New Years.

There is a new county/city P25 system being built, but it hasn't gone on line yet. There was an investigative report in the paper a couple of years ago questioning why the mobile and portable radios were sitting in a warehouse, but I haven't seen anything since.

If you live in the city itself, the Mobile County Simulcast Site is probably your best bet.

You'll also be able to hear the analog traffic, the county sheriff, county fire, EMS, Pritchard and some of the other cities that use the system.

Sent: Friday, February 10, 2017 2:24 PM
To: BCD536HP@yahoogroups.com
Subject: Re: [BCD536HP] New to this group and need help

Ray,

I see the Mobile City PD and FD listed as;

System Name:

Mobile County

Location:

Mobile, AL

County:

2 counties

System Type:

EDACS Networked Standard

System Voice:

ProVoice and Analog

Last Updated:

April 12, 2014, 8:09 pm (
<http://www.radioreference.com/apps/db/?sid=374&tab=reports#history> Added Site # 017
(Jack Hamilton Rd))

System type is EDACS. But it's a specific flavor of EDACS called ProVoice. I believe EDACS is an open (not intentionally designed to be a private system, but the ProVoice flavor of it may have been chosen before scanners were manufactured to receive it. Now, the 536 can receive ProVoice but at an additional cost ($50?-the cost of the license you get from Uniden so you can download their firmware which modifys the scanner for inclusion. That's it.

If what you hear on Broadcastify is what you want, it's something you can get. Broadcastify merely links personal scanners just like you can buy and streams them live over the

Internet

Read what other replies you get from the group also. They may have firsthand knowledge. I live in Ct. and only looked at RR.

Encryption (more specifically decryption) is not legal in the USA.
If you can hear it on Broadcastify, it's very likely not encrypted.

Setup is as simple as entering a zip code and range.

As to the other questions, I'll defer to someone more familiar with those
specific systems.

Ray,

The City of Mobile will load from RR but that won't get you all the way there... Pro Voice will need to be added to the BCD536HP. As you have posted to the 536 group I assume you are referring to this radio. But check other radios for the ability to upgrade to Pro Voice that Uniden makes. The "Home Patrol" versions may have this Pro Voice option available to us also. These radios allow the zip codes to be entered. The radios have onboard the data base and will automatically load and scan the zip code area you enter.

You'll see all of the talk groups, but you'll only hear a buzz unless
you buy the Pro Voice upgrade. It's $50.00 and if you want to hear
Mobile City, it's worth it.

Information on buying the upgrade is here,
http://info.uniden.com/UnidenMan4/ProVoice

From: Ray
Topic: 4377 Message: 4388

Thank you Bill.

I am able to monitor the County of Mobile, Al EDACS System.

I also found out late last night that all City of Mobile operations are on their new system,

PD, EMS. Fire, Public Trans, Public Trash, etc. None of them are on the EDACS anymore.

Also was told that a lot of the Municipalities have already had the new radios like Mobile uses installed in some of their units.

They are just waiting for all the Municipalities & Units to be fitted with the new radios before they all switch at one time.

I have made up my mind even though I don’t really have the money, but I am going to get the 536 with the Pro-Voice and DMR upgrades.

I do not know who has the better price or warranty. If anyone can lead me to the right place that would be great.

If that is allowed on the group. If not allowed, I can be emailed directly @ bcd536hp1 @ yahoo

Thanks again Bill and EVERYONE who has helped me so far!!!!

Subject: Re: [BCD536HP] New to this group and need help

Ray,

I see the Mobile City PD and FD listed as;

System Name:

Mobile County

Location:

Mobile, AL

County:

2 counties

System Type:

EDACS Networked Standard

System Voice:

ProVoice and Analog

Last Updated:

April 12, 2014, 8:09 pm (
<http://www.radioreference.com/apps/db/?sid=374&tab=reports#history> Added Site # 017
(Jack Hamilton Rd))

System type is EDACS. But it's a specific flavor of EDACS called ProVoice. I believe EDACS is an open (not intentionally designed to be a private system, but the ProVoice flavor of it may have been chosen before scanners were manufactured to receive it. Now, the 536 can receive ProVoice but at an additional cost ($50?-the cost of the license you get from Uniden so you can download their firmware which modifys the scanner for inclusion. That's it.

If what you hear on Broadcastify is what you want, it's something you can get. Broadcastify merely links personal scanners just like you can buy and streams them live over the Internet

Read what other replies you get from the group also. They may have firsthand knowledge. I live in Ct. and only looked at RR.

wrote:

Hello to all.

I am new to this group as well as to the functions of this scanner.

I haven’t purchased it yet but have some questions.

Until I can get the answers I need there is no sense of me purchasing one.

The last Uniden scanner I purchased was 246T and it has served me well.

I have used RadioReference database to find my frequencies and the LCN order.

I line in Mobile County Al and I can find those frequencies for the County of Mobile such as Citronelle, Saraland, Creola, etc.

There are not any frequencies for the CITY OF MOBILE. They switched to a new system about 3 years ago.

I can listen to The City of Mobile on Broadcastify, but I want my on scanner.

1. Will this scanner receive The City of Mobile, Al out of the box?

2. Do I need to have it upgraded to the Pro-Voice in order to receive The City of Mobile, Al?

3. Do I need to also purchase the encryption key?

4. How hard is this scanner to set up?

I am reaching out for your help. I want to be able to listen to the City of Mobile, not just the County and the municipalities within the County.

I have searched on RadioReference and everywhere I can think of for those frequencies for The City of Mobile.

Any help on my questions will deeply be appreciated.

Ray Ray

Thanks again Gary.

And yes I want to be able to monitor The City of Mobile in real time.
I know I can listen to it on Broadcastify,
but it is not the same as having my scanner so I can program it the way I
want and listen to what I want to.

You'll see all of the talk groups, but you'll only hear a buzz unless you
buy the Pro Voice upgrade. It's $50.00 and if you want to hear Mobile City,
it's worth it.

Information on buying the upgrade is here,
http://info.uniden.com/UnidenMan4/ProVoice

From: Gary Saffer
Topic: 4377 Message: 4390

I'm checking on your information over at Radio Reference. Not that I don't believe you, but I'm surprised that no one on the Alabama forum has mentioned this.

Also, if they have moved, you can probably do without the Pro Voice upgrade. There's not a lot of it around the nation and EDACS and Pro Voice are being phased out as Harris has announced that it's End of Life and support will soon stop.

These are the main site frequencies for the new system,

0769.2562
0769.5062
0769.7562
0770.0062
0770.2812
0770.6062
0770.8562
0771.1812
0771.4312
0771.9062
0772.3062
0772.5812
0772.8812
0773.1312
0773.3812
0773.6312

Oh, one last thing. There have been rumors that the new system is going to be encrypted, and if that's true, we're going to be out of luck.

As you have posted to the 536 group I assume you are referring to this radio. But check other radios for the ability to upgrade to Pro Voice that Uniden makes. The "Home Patrol" versions may have this Pro Voice option available to us also. These radios allow the zip codes to be entered. The radios have onboard the data base and will automatically load and scan the zip code area you enter.

4391. RE: [BCD536HP] New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-11 20:34:11 UTC
From: Ray
Topic: 4377 Message: 4391

Gary, once again thank you.

I appreciate those frequencies.

I belong to the southalabama group and I have not been able to get anyone to say anything.

It is all like a great big special opps thing going on.

I use to help as many people as I could with the EDACS system. They at one time moved 2 towers and relocated and gave them new frequencies.

Everyone went crazy because they could no longer receive the EDACS system. I took my time and found

All the frequencies and correct LCN’s and posted them on RR years ago and then someone else came behind me and

Changed a few descriptions and then took credit for all my work. One of the Towers is 1 mile from my home.

That is another thing I cannot get any information out of anyone about. Is the County has spent all these millions of

Dollars for these new Harris radios and they are still to this day installing them into all the Units throughout the County. Every City.

I know for a fact that the radios they are installing are NEW Harris Radios. I have seen them up close.

Thank You,

Ray Ray

4392. Re: [BCD536HP] New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-11 21:35:32 UTC
From: Bill Nolan
Topic: 4377 Message: 4392

Ray, Gary,

There seems to be newer info out there that rumors a move to a new system... that may include some level of encryption, or not. Since I'm from Ct. I would recommend doing what I do when I have trouble receiving a system while while traveling on vacation... and that is this... I visit a local fire station and ask around. There is usually a scanner buff who is up on what's going to work. And more importantly, what's NOT going to work. Volunteer firehouses are usually a better bet when it comes to finding one of the scanner guys so checking in with an outlying volunteer community (if the city runs a paid dept may be your best bet. Since RR didn't mention anything about a new system (encrypted or otherwise) the scanner buff in the vol FD might be the better reference. And since RR data is compiled from regular people submitting the latest data, it may not be up to date. Data comes from volunteer submissions (although there are some regional coordinators that are more conscientious than others and do a good job of keeping current.)

I'd hate to see you spend a chunk of cash and learn you may hear what you want now, but won't in the very near future because you were unaware of a planned system change that either included encryption or it as type of system that scanners don't currently receive, and may never receive due to proprietary issues. (In some cases manufacturers developed and own the rights to the way their gear works and will not release or allow others to use it.)

Hope this helps,
Bill

Also, if they have moved, you can probably do without the Pro Voice upgrade. There's not a lot of it around the nation and EDACS and Pro Voice are being phased out as Harris has announced that it's End of Life and support will soon stop.

These are the main site frequencies for the new system,

0769.2562
0769.5062
0769.7562
0770.0062
0770.2812
0770.6062
0770.8562
0771.1812
0771.4312
0771.9062
0772.3062
0772.5812
0772.8812
0773.1312
0773.3812
0773.6312

Oh, one last thing. There have been rumors that the new system is going to be encrypted, and if that's true, we're going to be out of luck.

Gary

EDACS is an open (not intentionally designed to be a private system, but the ProVoice
flavor of it may have been chosen before scanners were manufactured to receive it. Now, the
536 can receive ProVoice but at an additional cost ($50?-the cost of the license you get
from Uniden so you can download their firmware which modifys the scanner for inclusion.
That's it.

Broadcastify merely links personal scanners just like you can buy and streams them live
over the Internet

4393. RE: [BCD536HP] New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-12 04:00:26 UTC
From: Ray
Topic: 4377 Message: 4393

Bill thanks for your input.

I am friends with the Fire Chief here and this is what he told me. I don’t know if he was shooting straight or not. He always has In the past!!!!!!

That the Harris radios that have been purchased are going into all the Municipalities in the County. Yes that same Radio that The City of Mobile uses. Harris P25 Digital.

He also stated that there was plans once all vehicles were equipped with those radios that they were going to switch to the encrypted signal.

But he says that has been put on hold. I asked him why has the decision about the radios going to encrypting change.

He said he wasn’t told why and he didn’t want to push for an answer. We are a small City, Volunteer Fire Dept.

He said he was also told that the County had no immediate plans to purchase any new radio equipment because of the millions of $$$$ already invested

And The County has no more $$$$ for another system

So, I am still in the dark. Like you said Bill, that is a lot of money to sink into a scanner that may or may not work in a few more months.

Thanks’

Ray

Subject: Re: [BCD536HP] New to this group and need help

Ray, Gary,

There seems to be newer info out there that rumors a move to a new system... that may include some level of encryption, or not. Since I'm from Ct. I would recommend doing what I do when I have trouble receiving a system while while traveling on vacation... and that is this... I visit a local fire station and ask around. There is usually a scanner buff who is up on what's going to work. And more importantly, what's NOT going to work. Volunteer firehouses are usually a better bet when it comes to finding one of the scanner guys so checking in with an outlying volunteer community (if the city runs a paid dept may be your best bet. Since RR didn't mention anything about a new system (encrypted or otherwise) the scanner buff in the vol FD might be the better reference. And since RR data is compiled from regular people submitting the latest data, it may not be up to date. Data comes from volunteer submissions (although there are some regional coordinators that are more conscientious than others and do a good job of keeping current.)

I'd hate to see you spend a chunk of cash and learn you may hear what you want now, but won't in the very near future because you were unaware of a planned system change that either included encryption or it as type of system that scanners don't currently receive, and may never receive due to proprietary issues. (In some cases manufacturers developed and own the rights to the way their gear works and will not release or allow others to use it)

Hope this helps,

Bill

On Feb 11, 2017, at 3:34 PM, 'Ray' bcd536hp1@yahoo.com [BCD536HP] <BCD536HP@yahoogroups.com <mailto:BCD536HP@yahoogroupscom> > wrote:

Gary, once again thank you.

I appreciate those frequencies.

I belong to the southalabama group and I have not been able to get anyone to say anything.

It is all like a great big special opps thing going on.

I use to help as many people as I could with the EDACS system. They at one time moved 2 towers and relocated and gave them new frequencies.

Everyone went crazy because they could no longer receive the EDACS system. I took my time and found

All the frequencies and correct LCN’s and posted them on RR years ago and then someone else came behind me and

Changed a few descriptions and then took credit for all my work. One of the Towers is 1 mile from my home.

That is another thing I cannot get any information out of anyone about. Is the County has spent all these millions of

Dollars for these new Harris radios and they are still to this day installing them into all the Units throughout the County. Every City.

I know for a fact that the radios they are installing are NEW Harris Radios. I have seen them up close.

Thank You,

Ray Ray

I heard from someone from MRFD who said that the switch over to the Harris P25 system is still a few months out.

It's up to you whether or not you want to spend the money for the Pro Voice upgrade. I did even though I'm only there 2-3 times a year.

The article I mentioned was from at least a year ago and pointed out that the mobiles and portables were still sitting in their boxes and that the warranties had expired on them. There were some questions about the shop doing the work and one of the people from the county having an inappropriate financial relationship, but I forget the details.

Here is a link to some stories on the subject at the Fox10 website,

http://www.fox10tv.com/category/302083/mobile-county-911-board-investigation

Ray,

Sounds like so much nonsense... Consider this if you will... ANY taxpayer money invested in a new system is subject to public scrutiny. Meaning any citizen merely need ask the city for the history and they give it to you. Your fire chief can't be bothered it seems-his is the day in day out operations of the FD. Purchasing radio Systems isn't left up to vol fire chiefs so he doesn't know and doesn't care to know. To him, a radio is a tool and as long as it does what he needs he's happy. Can't blame home for that. Contact your city alderman or whatever they call your local govt representative and ask him formally to get answers to your questions about the new system. Is it digital? Will it be encrypted? Etc.

Bill

As you have posted to the 536 group I assume you are referring to this radio. But check other radios for the ability to upgrade to Pro Voice that Uniden makes. The "Home Patrol" versions may have this Pro Voice option available to us also. These radios allow the zip codes to be entered. The radios have onboard the data base and will automatically load and scan the zip code area you enter.

EDACS is an open (not intentionally designed to be a private system, but the ProVoice
flavor of it may have been chosen before scanners were manufactured to receive it. Now, the
536 can receive ProVoice but at an additional cost ($50?-the cost of the license you get
from Uniden so you can download their firmware which modifys the scanner for inclusion.
That's it.

Broadcastify merely links personal scanners just like you can buy and streams them live
over the Internet

4396. RE: [BCD536HP] New to this group and need help

Yahoo group: BCD536HP
Date: 2017-02-12 16:35:34 UTC
From: Ray
Topic: 4377 Message: 4396

Gary,

I have 2 questions if you don’t mind answering them?

1. Can you provide me with a link where you got these frequencies from?

2. Can you tell me if these are entered into the scanner as conventional; or what?

Thank You,

Ray

I'm checking on your information over at Radio Reference. Not that I
don't believe you, but I'm surprised that no one on the Alabama forum
has mentioned this.

Also, if they have moved, you can probably do without the Pro Voice
upgrade. There's not a lot of it around the nation and EDACS and Pro
Voice are being phased out as Harris has announced that it's End of Life
and support will soon stop.

These are the main site frequencies for the new system,

0769.2562
0769.5062
0769.7562
0770.0062
0770.2812
0770.6062
0770.8562
0771.1812
0771.4312
0771.9062
0772.3062
0772.5812
0772.8812
0773.1312
0773.3812
0773.6312

Oh, one last thing. There have been rumors that the new system is going
to be encrypted, and if that's true, we're going to be out of luck.

Gary
